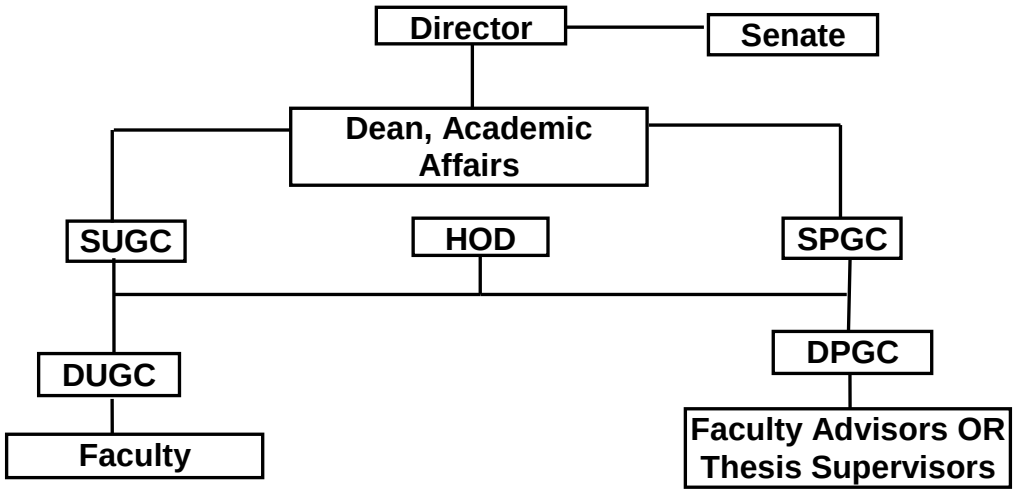
Organization Structure for Academic Matters of the PG and PhD Students



Committees for Academic Matters of the PG Students

Department/Discipline Post-Graduate Committee (DPGC): Each department/ discipline/inter-disciplinary research program has a DPGC to deal with all the academic matters of its PG students. The committee members and its convener are appointed by the concerned Head. The Thesis supervisor(s) or Faculty advisor(s) of a PG student report the academic matters related to that PG student to the concerned DPGC. Its composition and scope of work are described below:

Composition of DPGC	Scope of Work
1. Members: 3-4 faculty members representing all the major specializations of that discipline and PG Student Representative nominated by the Students Gymkhana. **2. Convener:** One of the members of DPGC appointed by the concerned Head. 3. **Appointing authority:** The concerned Head.	1. To deal with issues related to **academic programmes, PG curriculum and courses, academic performance, academic indiscipline, academic malpractices** of individual PG student and send its recommendations to the SPGC. 2. Assessment of the **academic programmes** and suggests appropriate **revisions or modifications or improvements** to Academic Senate through SPGC. 3. Revising the PG curriculum. 4. Starting of new PG programmes and courses and recommending same to the SPGC. 5. Cases of **Early-termination** of the PG students of the concerned Departments/Disciplines. 6. Any other issue related to PG students.

Senate Post-Graduate Committee (SPGC): This is an Institute level committee for dealing with the academic matters of the PG students based on the recommendations of the DPGCs of the Institute and submit its recommendations to the Senate. Its composition and scope of work are described below:

Composition of SPGC	Scope of Work
1. Members: (A) Conveners of the DPGCs. (B) Faculty members from those disciplines which are not represented by the DPGC. (C) Two PG students nominated by the Students Gymkhana as the PG Student Representatives. * 2. **Convener:** Nominated by the Senate or Chairman, Senate 3. **Member Secretary:** DR/AR (Academics) *ex-officio.*	1. To discuss the issues recommended by the DPGCs covering the **academic programmes,** P**G curriculum and courses, academic indiscipline, academic malpractices** and send its recommendations to the Senate. 2. Based on the recommendations of the DPGC, and assessment of the **academic programmes,** suggest appropriate **revisions or modifications or improvements** to Senate. 3. Discussing the revision of the PG curriculum based upon the recommendations of the DPGC and recommending same to the Senate. 4. Discussion on the starting of new PG programmes. 5. Discussion on starting of new PG courses and recommending same to the Senate. 6. Cases of **Early-termination** of the PG students keeping in view the recommendations of the concerned DPGC. 7. Any other academic issue related to the PG students.

(to be excused from those meetings or part of meeting in which certain academic performance issues of the students are to be discussed)*

Rules and Policies for PG and PhD program

1. **Teaching Assistantship (TA) Work:** ALL the Full-time MTech and PhD students irrespective of their category of admission (i.e. **MHRD/ Institute TA, external agency Fellowship Awardees (FA) / Sponsored (SW)** have to do Teaching Assistantship (TA) duties assigned by the Institute or Competent Authority **to the extent of 8-12 hours of work per week**.

   Under the TA duties, a MTech/ PhD student is supposed to assist the concerned faculty member (to be known as TA Supervisor) in the academic work related to conducting of practical classes, tutorial classes, preparing assignments/tutorials and their solutions, invigilation duties, etc. and the other academic work assigned by the concern TA Supervisor or the Competent authority.

   TA **must NOT** be assigned **confidential work** such as setting up question papers of different examinations and quizzes, final evaluation of answer sheets of different exams, and finalizing the grades, etc. Under no circumstances,

   TAs **cannot** be assigned the duties of taking lecture classes of any course.

   Monthly release of MTech/ PhD scholarship/Fellowship requires submission of TA work report in the specified format duly signed by the TA Supervisor and Thesis supervisor or Faculty Advisor.

2. **RA Category Students:** The PhD students admitted under the category of **Research Assistantship (RA)** are **part-time students** and each Discipline/Centre/School may induct one Research Assistant every year. These RAs have to look after the laboratories and also assist in teaching or research or other work assigned by the Head of the Discipline/Centre/School or Convener, inter-disciplinary program (IDP). They are required to work for about **08-12 hours a week**. **They have to complete the PhD Programme in five/six years,** depending on their qualifying degrees.

3. **Release of MTech and PhD Scholarship/Fellowship:** Each MTech/ PhD student must be present in the Institute at least during the working hours on all working days unless he/she has been sanctioned some entitled leave. Each MTech/ PhD student has to sign an attendance register daily during the specified time kept in the office of the concerned Discipline/ School/ institute.

   The scholarship/fellowship of the MTech/ PhD students admitted under different category shall be processed for payment on the monthly basis by the respective Head, only after receiving a report from the concern TA supervisor and/or thesis supervisor/advisor duly signed by him/her (as the case may be).

4. **Maximum Duration of PhD/MTech Scholarship:**

   i. A **PhD/MTech student** will get the scholarship for the **maximum duration** as defined in either (a) **OR** (b), **whichever is earlier**.

      a. From the date of joining the PhD/MTech program till the date of submission of PhD/MTech thesis, if thesis is submitted in less than FOUR years (Two years for MTech) from the date of joining the program.

      b. For a **maximum duration of FOUR (TWO years for MTech) years** from the date of joining the program.

ii. The maximum duration excludes the period of internship or fellowship or abroad visit under collaborative projects for which a student does not get scholarship from the Insitute.

iii. A PhD student can leave the institute to join an employment or Post-doc fellowship after submitting his/her PhD thesis and the No Dues certificate. In such cases, the PhD scholarship of the student, if he/she is getting it, will be stopped w.e.f. from the date of PhD thesis submission.

iv. The PhD scholarship of last month will be released after PhD viva and submission of No Dues Certificate by the Student.

v. After submitting PhD thesis, if a student is interested to continue working on his/her PhD thesis and publication related work under his/her PhD thesis supervisor(s) by being present in the Institute at least durng the working hours on all the working days then he/she has to apply in the prescribed form for the same.

vi. To get scholarship for more than four years, the student has to apply in the prescribed form through proper channel.

vii. For any such issues related to PhD/MTech, the student should move his/her application through his/her thesis supervisor(s), Convener of DPGC and the Head of his/her discipline.

5. **PhD Course Credit Requirements:** The minimum and maximum number of courses and credits for the different categories will be as follows.

In addition to the course requirements mentioned below, each PhD student has to do a **compulsory** course **HS 641: English Communication Skills** having contact hours (L-T-P) of 2-0-2 to improve his/her English language communication skill **within its FIRST YEAR of joining the PhD program**. This course will have grades as **Pass (PP) or No Pass (NP)** i.e. it will not affect the CPI of the student.

Category I: PhD students with **MTech/ ME/ MPhil Or equivalent qualification** shall do 2-3 PhD level courses of at least 3 credits each and 1 PhD seminar course of at least 2 credits.

Minimum number of courses will be 2 PhD level courses and one PhD seminar course (i.e. *(minimum coursework of 8 credits)*.

Category II: PhD students having **MSc/ MA/ MCom/ MBA/ BTech/ BE or equivalent qualification** admitted to a **Science or HSS discipline** shall do 5-7 courses of at least 3 credits each and 1-2 PhD seminar courses of at least 2 credits each.

Minimum number of courses will be 5 PhD level courses and one PhD seminar course *(minimum coursework of 17 credits).*

Category III: PhD students having **BTech/ BE / MSc or equivalent qualification** admitted to PhD programme in an **Engineering discipline** shall do 6-8 courses of at least 3 credits each and 1-2 PhD Seminar courses of at least 2 credits each. .

Minimum number of courses will be 6 PhD level courses and one PhD seminar course *(minimum coursework of 20 credits).*

6. **Duration of PhD Coursework:** All the Ph.D. students are required to do course work, which shall normally be completed:

   (a) Within **one semester** from the date of joining by the students having **MTech/ ME/ MPhil Or equivalent qualification**.

   (b) Within the **first two semesters** from the date of joining by the students having **BTech/ BE/ /MSc /MA /MCom /MBA or equivalent qualification.**

   (c) All the PhD students MUST complete their course under normal circumstances **within ONE year** of joining the PhD program.

   (d) For any variation other than the requirements mentioned in (a)-(c), **permission from the Senate Post Graduate Committee (SPGC)** will be required which will consider the recommendations of the Discipline Post Graduate Committee (DPGC) while deciding on the matter.

7. **Minimum CPI requirement:** Each MSc, MTech and PhD student must maintain a **minimum CPI of 6.0 at the end of each semester** for continuation in the program. Below this CPI, the MSc, MTech and PhD student will be placed on **Academic Probation** (AP) which is one time exercise during the entire duration of the programme with maximum deduction of Scholarship up to 50%.

   During Academic Probation, the MSc, MTech and PhD student must secure a CPI of 6.0 for continuation in the MSc, MTech and PhD programme otherwise the student may be terminated from the program.

8. **Policy for Auditing a Course:**

   (i) If a student **formally registers** to audit a course through proper course registration and wants Audit grade (AU) to be printed on his/her gradesheets for that course, then the concerned student

   (A) Must meet the class attedance criteria of that course as announced by the course coordinator **AND**

   (B) Must appear in all the components of the evaluation and secure a pass grade (i.e. non-FR) grade at the end of the semester. Otherwise audit of a course will be considerd an **informal arrangement** between the concerned student and the concerned Course Coordinator for attending the course classes for the sake of enhancement of knowledge/information/skills and in such cases no grade will be shown in the grade sheet for such audited course.

   (ii) The number of **formal or informal audit registered student** cannot be used to satisfy **the minimum student criteria to run a course**.

9. **Confirmation of Registration for PhD Degree:** PhD students shall be granted **Confirmation of Registration for the PhD degree** from the first working day of the semester following the one in which they have successfully completed the required course work.

10. **Selection of Thesis Supervisor:** An MSc and MTech student has to formally select his/her thesis supervisor(s) after completing the **required course-work**.

    A PhD student has to formaly select his/her Theiss Suprvisor(s) either within **ONE semester** of joining the PhD programme or after completing the **required course-work.**

One thesis supervisor will be from the discipline and other supervisor(s) can be taken from within/outside the Discipline/Institute. **Maximum number of thesis supervisors** should NOT be more than **three** under normal circumstances.

To maintain the inter-disciplinery nature of **PhD program in Material Science and Engineering**, there should be at least 2 Thesis Supervisors of a PhD student and they should be from different disciplines.

Until an MSc, MTech or PhD student finally and formally selects his/her thesis supervisor, the concerned ***DPGC, Convener*** will be the **Faculty Advisor** to the student. The faculty advisor will provide guidance and advice concerning academic, professional, and personal growth of the assigned students. The guidance to the students will enable them to complete their course of study in a smooth and satisfactory manner.

11. **Constitution of PG Student's Progress Committee (PSPC):** Progress of thesis work of each MSc, MTech and PhD student will be monitored through a committee called **PG Student's Progress Committee (PSPC)**.

    Composition of PSPC: The PSPC will consist of the thesis supervisor(s), one faculty within the discipline and one faculty/expert outside the discipline. One of the thesis supervisors will be the Convener of the PSPC.

    The process of constituting the PSPC can be initiated by a PG/PhD student once the Thesis Supervisor(s) is (are) finalized. The composition of the PSPC is to suggest to the respective DPGC convenor and based on the recommendations of the DPGC convenor, it is to be finally approved by the SPGC convenor and to be notified by the Academic Office.

12. **Finalization of the PG/ PhD thesis Topic:**

    Once the thesis topic of an MSc, MTech and PhD student is decided then it should be brought to DPGC for formal approval and institute-wide circulation to avoid the duplication of the thesis work.

13. **Monitoring the Progress of the PG/ PhD Student:** The PSPC will monitor the progress of the thesis work of the MSc, MTech and PhD student through a **Research Progress Seminar (RPS)**.

    For the PhD student, the **first RPS** is to be conducted after completing one year of joining the PhD programme.

    Based on the RPS, the PSPC will evaluate the progress of the work of the PhD student in terms of satisfactory or unsatisfactory. The progress report duly signed by the PSPC members must be submitted to the Academic Office for further action latest by **31st July** for the PhD students registered in the PhD programme in the **Autumn semester** and by **31st January for** the PhD students registered in the PhD programme in the **Spring Semester** admission and**.**

    In case the RPS report of a student is found **unsatisfactory** then he/she will have to give another RPS before the PSPC within maximum THREE months of the corresponding RPS. The second time RPS must be satisfactory; if it is still unsatisfactory then the matter must be reported to the SPGC Convenor for further action.

    If required, the thesis supervisor(s) may arrange additional RPS between two **consecutive successful RPS**.

14. **Eligibility for PhD Thesis Submission:** A PhD student will be eligible to submit the PhD thesis ONLY after

    He/she has **at least TWO publications** in the **peer reviewed Journals/International Conferences**

    OR

    Has been granted a Patent for his/her research work done in the PhD programme.

    OR

    Has made significant contribution in the development/dissemination of Science /Technology/Art.

15. **Minimum and Maximum Time for PhD Thesis Submission: Minimum time period** for submission of PhD thesis will be TWO years under **Category-I** and TWO and HALF years under **Category-II** and **Category-III** from the **Confirmation of Registration for the PhD degree**.

    Maximum time period for submitting the PhD thesis for full-time PhD program will be **FIVE years** from the date of admission to the PhD program. Request for further extension beyond the maximum duration must be sent to the SPGC through DPGC.

16. **Course codes and grades for MSc, MTech and PhD Seminar and Thesis:** The codes for the MSc/ MTech seminar is XX 698 and for PhD Seminar course is **XX 797** (for the autumn semester) and **XX 798** (for the spring semester). The course **code of the PhD thesis** will be **XX 899 and** course **codes of the MSc/ MTech Reserarch Projects** will be **XX 799 (3rd Sem) and XX 800 (4th Sem)** where XX is the code of the discipline (i.e. CS, EE, ME, HS, CH, MA, PH, BSE, MSE, etc.). PhD thesis will be awarded **SS** as satisfactory and **US** as unsatisfactory, while the MSc and MTech thesis will be awarded letter grade.

17. **Policy for Class Attendance:** The weight-age for attendance is considered as 10 marks out of total 100 marks.

    Keeping marks for attendance is solely up to the discretion of the course coordinator. He/she may not keep marks for attendance, but if they keep marks for attendance, the below-mentioned proposed scheme must be implemented:

    i. Those students who have an attendance percentage of 80 and above (i.e., >=80%) would be awarded complete ten marks (i.e., 10/10).

    ii. Students whose attendance percentages lie between 50 to 80 (50% - 80%) have their attendance score calculated as the ratio of their attendance percentage points and the threshold attendance percentage requirement, multiplied by 10. This hence guarantees a range of 6.25 to 10 marks attainable.

        For example if the attendance threshold percentage is 80% and the student attends 60% of the classes, the student would be awarded a score of (60/80)*10=7.5 marks on 10.

    iii. For students with border line attendance (for example: 49% or 79%), it is solely up to the course coordinator to consider the student for 50% minimum attendance or the threshold attendance of 80%.

    iv. Students whose attendance percentages lie below 50 (i.e., <50%) would not be allowed to appear for the end-semester exams, would get an XX grade and would have to repeat the course. However, this decision of awarding XX grade is solely up to the discretion of the course coordinator.

v. If any student misses classes for institute events like FLUXUS or to represent IIT Indore (in BAJA, ROBOCON etc.) or due to medical reasons, the students ought to be granted attendance for the missed classes as per the discretion of the course coordinator (on production of supporting documents or notification by the Academic Office/DOSA/Student Gymkhana as per the underlying reason).

18. Policy for the Components of Evaluation

I. As per the Institute policy, mid semester examination (MSE) and end semester examination (ESE) are the **essential components of the evaluation** with a **minimum weightage** of 20% and 40% and **maximum weightage** of 40% and 60% respectively.

II. Other components of evaluation such as quizzes, term paper, term project, home assignments, viva, etc. can constitute maximum weightage up to 40% ONLY.

III. MSE and ESE are to be conducted as per the scheduled exam time table and as per the notified seating plan.

IV. The question papers for the MSE and ESE (even for open-book and take-home type) are to be submitted in the Academic Office within one working day in advance for distribution to all the invigilators for a particular MSE or ESE as per the seating plan.

V. Only home assignments during the entire semester without MSE and ESE are NOT allowed to evaluate the students registered in a particular course. This is against the institute norms, dilutes the academic standards of the Institute and highly unfair to the students. The faculty members must desist from such practices.

VI. Any deviation from this policy without prior approval will be considered very seriously.

19. Policy for Open-Book and Take-Home Exam

I. The concerned faculty has to declare well in advance in the class about the **Open-book or Take-home exams** to the students. The faculty should also declare as to what will be allowed in the Open-book exams i.e. lecture notes, handouts, data handbook, data sheets, etc. The question paper must contain the detailed instructions for the **Open-Book Exam** so that there is no confusion to the invigilators.

II. The **Open-book exam** will be of same duration as per the institute norms for the MSE or ESE or quiz. For any deviation from this, approval from DOAA is to be taken.

III. Both Open-book and Take-home exams are to be conducted on the **scheduled day as per the exam time table** using the IIT Indore answer sheets only.

IV. The **question papers** for both types of exams should be of such standards that they demand the necessity of having Open-book or take-home exam.

V. The question paper should be submitted to the Academic Office which distributes them to different invigilators according to the seating plan for the exam.

VI. Other Details for the **Take-home exam**.

(a) The Take-home exam generally should be of **maximum 24 hours duration** only. For any duration more than this, prior approval from DOAA needs to be taken.

(b) T**o maintain the fairness of take-home exams and t**o **avoid mass copying**, the questions should be **open-ended type** which cannot be solved by a group of students. To achieve this objective, the faculty is required to make **different sets of question papers equal in number to the number of the students registered in his/her course**. The concerned faculty should also inform the Academic Office as to which

student is to be given which set of question paper so that students do not interchange the question paper after taking it to home.

(c) Students should be asked to collect the Question paper from the Academic Office during the specified time only.

(d) The answer sheets must be submitted to the Academic Office within the stipulated time along with the question paper. The concerned faculty will collect the answer sheet from the Academic Office as done in case of regular exams.

VII. Any deviation from this policy without prior approval will be considered very seriously.

20. Policy regarding Rescheduling of Mid Semester Exam (MSE) and End Semester Exam (ESE) and other Components of Evaluation: Following policy is followed to deal with the request of re-scheduling the MSE, ESE and other compoents of evaluation scheduled as per the Academic Calendar:

I. Since, the schedules of MSE and ESE for both Autumn and Spring semester is known in 6-8 months in advance, therefore, the **students should NOT participate and/or organize any event/competition which clashes with dates of MSE and ESE**.

II. Requests of the students to reschedule MSE and ESE will NOT be considered for any **unapproved participation/event**s which clashes with the dates of MSE and ESE.

III. Faculty members will not entertain direct requests of the students to reschedule MSE, ESE and other exams for their unapproved participation/event.

IV. Request for rescheduling the exams for **approved events/participation** duly recommended by Students Gymkhana and DOSA must be sent to the Convener, Time Table Committee well in advance before the exam schedule is notified.

V. The MSE and ESE will **be pre-poned** and not **post-poned** in following extreme cases when there is clashes with the declared dates of MSE and ESE:

a. Interviews for IIMs admission

b. Medical emergency of the student for self

c. Approved participation in those Events/ Competitions which are recommended by the Students Gymkhana and DOSA

Deviation from this shall be treated on the merit of the case.

VI. The concerned Faculty member / Course Coordinator should submit the question papers for such pre-poned exams to the Academic Office for conducting such exams.

VII. The student will have to return the question papers along with the answer sheet for such pre-poned exams.

VIII. In a rare case if any exam however cannot be re-scheduled and a student still misses then he/she will be treated absent and awarded ZERO marks for such missed exams. (NB: ***It is compulsory to appear in ESE of a course. A student absent in the ESE of a course, is to be awarded the FR grade irrespective his/her performance in-semester components of evaluation***)

IX. For better planning of the Academic Calendar (AC), the Student Gymkhana must inform the Academic Office about the reputed important Competitions and Events in which students are likely to participate at the time of preparation of the Academic Calendar. The Academic Office will try to take care of the events/participation as informed by the Students Gymkhana while preparing AC.

21. Rules and Regulations for 5 Year BTech + MTech program

A. Eligibility:

a. Only those BTech students of IIT Indore are eligible to apply for BTech + MTech program who have completed all the prescribed courses of their BTech program till the 6th Semester and secured a minimum CPI of 7.00 at the end of 6th Semester without earning any FR/ XX grade in any of the courses registered by him/her till 6th semester.

b. There should not have been any disciplinary cases and/or penalty imposed or contemplated against the student. Student should not have been punished for any type of misconduct/ misbehavior/ indiscipline/ irregularities, and use of unfair means.

B. Other Conditions:

1. Those students who have been admitted for the dual degree program are not eligible for the campus placement activities in their 4th year.
2. A student admitted to this 5-Year BTech + MTech program **will not have any exit option.** He/she will get the degree at the end of 5th year by fulfilling all the prescribed requirements of this program.
3. The admitted students will be exempted from Internship, BTech Project (BTP), English Communication Skills course (HS 641). However, they have to fulfill their minimum requirements in their MTech Electives, PG Seminar course and MTech Research Project work.
4. The **last date of application** generally will be 31st March and list of selected candidates will be declared by 2nd week of May.

C. Intake: to be as decided by the discipline for each of its M.Tech. Program. This will be in addition to the seats sanctioned for the regular M.Tech. program.

D. Selection Criterion and Shortlisting: To be decided by the concerned discipline.

E. Scholarship: As per the MHRD norms from their 9th semester onwards provided the student has CPI ≥ 7.0 at the end of 8th Semester. Or else, after qualifying the GATE exam. If a student fails to fulfill either of these conditions then the student will not be eligible for any MHRD scholarship.

F: Fee: Fee structure of MTech program will be applicable from the 7th semester onwards.

22. Rules for Institute Staff (IS) or Sponsored Candidate (SW) categories doing PG and PhD programs:

Candidates from **Institute Staff (IS) category** or **Sponsored (SW) category** can enroll for PG and PhD programs of the Institute as **part-time** candidates subject to following rules and regulations which can be amended from time to time as per the requirement:

1. An IS category applicant must be a **permanent Institute employee** since last two years at the time of application. While, the **SW category** applicant should have minimum two-year work experience in a **reputed Industrial/Research Organization**.
2. The **part-time candidate** will not be entitled for payment of any fellowship/stipend during the entire academic program.
3. The IS category applicant is required to submit a “No-Objection Certificate” from the Head of the concerned department/section while, SW category applicant should submit the NOC from the Competent Authority of his/her parent organization along with his/her application in the prescribed form.

4. (A) The **NOC of the IS category** applicants should clearly state that:

   - The candidate is allowed to pursue the academic program on **part-time** basis.

Procedure for Submission of PhD thesis

1. ELIGIBILITY FOR PHD THESIS SUBMISSION: A PhD student will be eligible to submit the PhD thesis ONLY after meeting the requirements mentioned in (1A) **AND** 1(B),

(1A) MEETS THE MINIMUM RESEARCH PUBLICATION REQUIREMENTS:

A**t least TWO publications** in the **peer reviewed Journals/International Conferences**

OR

Granted ONE Patent for the research work done at IIT Indore under the PhD thesis programme.

AND

(1B) MEETS THE MINIMUM TIME REQUIREMENT CRITERIA: Minimum time period for submission of PhD thesis from the date of **Confirmation of Registration to the PhD degree (i.e.** from the **first working day of the semester** following the one in which they have successfully completed the **required course work**) is

(i) TWO years under **Category-I** (PhD students with **M.Tech./M.Phil. Or equivalent qualification**),

(ii) TWO and HALF years under **Category-II (**PhD students having **M.Sc./M.A/M.Com./M.B.A. or equivalent qualification** admitted to a **Science or HSS discipline)** and **Category-III** (**B.Tech. /M.Sc. or equivalent qualification** admitted to Ph.D. programme in an **Engineering discipline**)

2. OPEN SEMINAR: Before submitting the PhD thesis, an **OPEN SEMINAR** is to be given by the concerned PhD student about his/her PhD thesis work and in the presence of the PhD Student's Progress Committee (PSPC). This seminar will be OPEN to the entire IIT Indore Community and notice of this will be sent by the Thesis Supervisor(s) one week in advance. ***Before the OPEN SEMINAR, the PhD student will send the draft of synopsis of his/her PhD thesis to ALL the PSPC members.***

The PSPC may suggest the PhD student to incorporate all those feasible comments/suggestions received during the OPEN SEMINAR which can improve the quality of the PhD Thesis. The report of the successful Open Seminar must be submitted by the Thesis Supervisor(s) in the **prescribed form** (**Form-PTS 1**) well in advance before the student proceeds to submit his/her PhD Synopsis and the PhD Thesis.

3. SUBMISSION OF PhD SYNOPSIS and THESIS: After conduct of **SUCCESSFUL OPEN SEMINAR**, the PhD student through his/her thesis supervisor(s) has to submit the following:

(a) FIVE copies of **synopsis** of his/her **PhD thesis (both in softcopy and hard copy)** within **maximum 15 days** from the date of the Open Seminar along with the **required Certificates** (**Form-PTS 2**). The synopsis should be a **concise summary** (including the figures, tables, few references, and list of publications) of the PhD thesis. It should not

contain more than **8-12 pages** of A4 size with the text typed in **12 pt Times New Roman font having 1.5 spacing**.

The **primary objective** of the synopsis is to enable the reader to judge whether, prima facie there exists a case for accepting the proposed PhD thesis for the award of the PhD degree. The synopsis should therefore, clearly list the contributions resulting from the investigations carried out by the candidate, which has led to the advancement of knowledge in the field of investigation.

In order to fully appreciate the candidate's contribution, it is necessary to put it in a proper context. Therefore, it is **recommended that the synopsis** should contain a brief account of the existing knowledge and the inadequacy or gaps in this knowledge that led the candidate to the formulation of the problem of his / her investigation. A few references, needed in this respect should be included but their number should normally, not exceed ten. List of publications (including published, accepted, submitted in the refereed journals and conferences) or Patents (granted or applied) from the PhD work should be included.

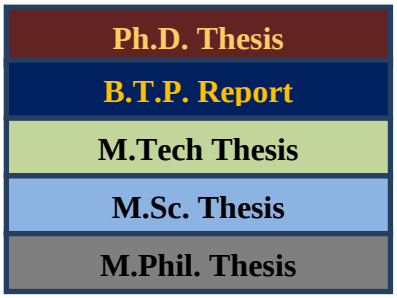
In case the PhD student gets employment and wants to submit the synopsis and PhD thesis from outside the institute after successful open seminar then the request can be made in the prescrbied format (**form-PTS 2a**)

(b) Required number (= 5 + number of thesis supervisor(s)) of ***soft or spiral bound*** copies of the **PhD thesis** along with the *required form* (**Form-PTS 4**) within **maximum ONE month** from the date of the Open Seminar along with its editable softcopy in the CD/DVD. The PhD thesis must be written in the prescribed format as mentioned below:

Printing Format: BOTH SIDE PRINTING

Paper: Executive Bond
Font: Times New Roman
Line Spacing: 1.5

Programme	**Colour of Front**	**Cover Font on cover**
PhD	*Maroon*	*Golden*
BTP	*Navy Blue*	*Golden*
MTech	*Pista Green*	*Black*
MSc	*Sky Blue*	*Black*
MPhil	*Light Gray*	*Black*



4. **PhD THESIS EXAMINERS:** The PhD thesis supervisor(s) will be the Thesis Examiner(s) also. In addition to this the PhD thesis supervisor(s) will suggest details of FOUR *examiners within India* and FOUR *examiners from outside India* in the *prescribed format* (**Form-PTS 3**) for evaluating the PhD thesis. The proposed PhD thesis examiners should have PhD qualification and should be

(a) Professor or Associate Professor in an Institute/University of international/national repute, OR

(b) Professor Emeritus of international/national repute but active in his/her research field, OR

(c) Scientist-F or above in a recognized research organization, OR

(d) An individual having minimum 10 years of post-PhD industrial experience.

From the list of suggested examiners, the Chairman, Senate[@] in consultation with the Dean, Academic Affairs* will give order of preference to these examiners. The **PhD synopsis** will be sent to the PhD thesis examiners in the order of preference for getting their consent to evaluate the PhD thesis within SEVEN days of receipt of such request. If NO consent or reply is received within SEVEN days from the first two examiners then the PhD synopsis will be sent to the next two examiners and so on.

From the list of suggested examiners, if NO examiner agrees to evaluate the PhD thesis then the concerned PhD thesis supervisor(s) will be asked to suggest new examiners.

** (a) If Dean, Academic Affairs (DOAA) is the PhD thesis supervisor, then Director may consult Dean R & D (DORD).*

(b) If both DOAA and DORD are the PhD thesis supervisors, then Director may consult DOFA .

@ If the Director is the PhD thesis supervisor then DOFA in consultation with DOAA may select the PhD thesis examiners.

The names of the selected examiners will be kept confidential till the PhD Oral Examination is conducted successfully.

5. EVALUATION OF THE PHD THESIS BY THE EXAMINERS: The PhD thesis examination board will consist of the Thesis Supervisor(s) and the thesis examiners selected as mentioned in (4). The softcopy and hardcopy of the PhD thesis will be sent to ALL the examiners.

The examiners will be requested to send the evaluation report of the PhD thesis **within TWO months** from the receipt of the PhD thesis in the prescribed format (**Form-PTS 5**).

If the evaluation report is **not** received within a period of two months, then a reminder will be sent to the examiner(s) for sending the evaluation report within **next two weeks**. In exceptional cases, the examiner(s) can be given **maximum one month additional time** for the PhD thesis evaluation i.e. maximum within three months the evaluation report should be received.

In unfortunate case of death of an examiner, a new examiner will be selected and the process of evaluation of the PhD thesis will be started afresh.

The PhD examiner will be asked to recommend ONLY one of the following four options along with the detailed report/feedback justifying his/her recommendation.

(A) The thesis in its present form is satisfactory for the award of the PhD Degree.

(B) The thesis is recommended for the award of the PhD degree subject to the clarification of the queries/comments before the PhD Oral Examination Board. If the PhD Oral Examination Board deems it appropriate, the same may be incorporated in the thesis based on the discussions during the viva-voice examination. The revised thesis need not be sent to the examiner.

(C) The thesis needs to be revised as per suggestions enclosed and the thesis be sent for re-evaluation.

(D) The thesis be rejected.

Recommendation of the Thesis Examiners including the Thesis Supervisor(s)	**Action to be taken**
1. A and/or B	(A) Oral Examination can be conducted and the required action to be taken if any recommendation is of 'B' category.
2. Any one examiner recommending option 'C'	(A) The thesis is to be REVISED as per the suggestions of the examiner who has recommended 'C' option. The Revised thesis to be resubmitted and will be sent 'ONLY' to that examiner. (B) The Oral examination to be conducted only when, there is a change in the recommendation.
3. Examiner(s) recommending option 'D'	(A) The thesis is to be REWORKED and REVISED in consultation with the Thesis Supervisor(s) incorporating the comments/feedback of the Examiner(s) who has/have given 'D' category recommendation in such a way that it improves the overall quality of the PhD work. (B) The Thesis is to be resubmitted and will be sent to different Examiner(s) for the evaluation.
4. The Thesis supervisor(s) recommending option 'D'	(A) In the rarest of the rare, the request of the PhD student for changing the supervisor may be considered. (B) The PhD thesis is to be reworked as per the guidance of the new Thesis supervisor. (C) The OPEN seminar is to be given again and after the successful OPEN Seminar, the thesis is to be submitted as new thesis. (D) The procedure of the thesis evaluation is to be followed considering it as new thesis.

6. ORAL EXAMINATION OF THE PHD THESIS and the ORAL EXAMINATION BOARD: The PhD oral Examination Board will consist of the following:

1. Thesis supervisor(s): In case of more than one thesis supervisor, one thesis supervisor (which will be recommended by the concerned discipline and will be notified by the Academic Office) will be the *Chairman of the Board*

2. Thesis Examiner (within India) as External Examiner

3. Other PSPC members

5. Convener, DPGC (*ex-officio*)

5. Head of the Discipline (*ex-officio*)

The date and time of the oral examination will be decided by the thesis supervisor(s) depending upon the availability of the Thesis Examiner (within India). It will be open to the IIT Indore community. A notice for same must be circulated by the Thesis Supervisor(s) to all the students and faculty in the institute well in advance.

The ***report of the Oral Examination*** must be submitted to the Academic Office in the prescribed format (**form PTS 6**).

After the successful Oral Examination or PhD Viva the student has to submit the ***hardbound copies*** of the PhD thesis incorporating all the corrections of the PhD Oral Examination Board along with the required form (**form PTS 7**) for the same.

7. HONORARIUM to the PhD THESIS EXAMINERS: Following honorarium will be paid to the PhD thesis examiners. The Head of Discipline or DPGC Convener must ensure that the payment of honorarium to Thesis examiner is made at the earliest and preferably on the day of PhD Oral Examination itself. Advance may be drawn for, on the spot payment.

	Examiner (with India)	**Examiner (outside India)**
Evaluation of the PhD Thesis	INR 8,000/-	US $ 200
Conducting the PhD Oral examination	INR 4,000/- + Travelling expenses from the workplace to IIT Indore and local hospitality	---

Procedure for Submission and Evaluation of MTech/MSc Thesis

Last date for submitting **softbound copies** of MTech/MSc thesis in the prescribed format will be **30th June**. The Oral Examination Board (ORB) for MTech/MSc thesis will consist of

1. Head or a faculty member nominated by him (Chairman)
2. The DPGC Convener
3. Members of the PSPC of the Student (which includes thesis supervisor(s), one expert from the discipline and one expert from other discipline)

The last date of conducting the **Oral Examination/Thesis Defense** of the MTech/MSc thesis will be **10th July** and grade must be submitted latest by **12th July**. The notice for MTech/MSc thesis defence should be circulated at least **4 days in advance** to the entire IIT Indore community.

The last date of submitting the **final hard bound copies** of MTech/MSc thesis after incorporating all the changes suggested by ORB along with the **No dues Certificate** (NDC) will be **17th July.** After submission of hardbound copies of the MTech/MSc thesis and NDC**, the provisional degree certificate can be issued to an MTech/MSc student.** The Date of MTech/MSc thesis will be considered as date of completion of the program.

(In case there is a holiday/vacation on the above-mentioned dates then it should be replaced by the next working day)

6.	Scope of the Course	The concept of Diaspora as a state of deterritorialization is perhaps a common theme that runs across the various implications of the term extending but not confined to ideas of exile, displacement and migration, forced or otherwise. While recognizing that there is always a hint or trace of the roots / home that defines the cultural and historical identity of the exile / migrant the course will seek to build a healthy wariness of essentializing threads of race or ethnicity that limit discussions to those that revolve around nationhood.

6.	Scope of the Course	The course will build on introductory concepts in the field of post-colonialism using them to see if a move can be made away from the advocacy of the conventional empire model. The readings of texts such as *The travels of Dean Mohammed*, *A Passage to India*, *Oroonoko*, *Mansfield Park*, *Wide Sargasso Sea*, *Heart of Darkness* and the stories of Tagore among others will strive to establish a premise for the study of postcolonial texts based on more intimate spaces such as folkways, societal ritual, language and religion, eventually helping the reader to think in terms of "imagined communities" rather than ones that are historically generated.

6.	Scope of the course	This course aims to familiarize research students with the fundamentals of theoretical vocabulary and understand the works of important theorists in the discipline. The course uses the Norton Anthology of Theory and Criticism as the overarching text to select the particular theorists and works to be covered based on the research interests of the students of a particular semester. The other seminal texts are selected keeping in mind some of the relevant questions of criticism in the discipline. Postcolonial Studies, Politics of language, translations are some of the areas covered in depth. Faculty teaching the course can add other works relevant to the broad area of literary theory for any particular semester. This can change based on individual faculty and student research areas. The aim of the course is to discuss the role of theory in literary discourse and its importance in critically examining the contexts of literary works that may lead to new ways of reading and understanding different works. The course offers an in-depth understanding of theoretical terminology that enables students to develop a sense of the strengths and weaknesses of the well-known schools of theory. Most importantly, the course aims to train them to recognize the parameters from which the terminology emerges and develop the ability to analyze incisively and offer new ways of (re)configuring meta narratives.
7.	Course Syllabus	Formalism, Reader-response theory, Rhetoric, Dialecticism, Structuralism, Post-structuralism, Post-colonialism, Translation Theories, Deconstruction, Feminist and Gender studies, Race Theory, Cultural Studies will be some of the major schools of theory covered.

3.	Credit Structure	L-T-P-Credit 2-0-2-3
4.	Name of the Concerned Discipline/ School	Psychology/Humanities & Social Sciences
5.	Pre-requisite, if any (for the students)	Basic Understanding of Psychology
6.	Course Objective	The aim of the course is to familiarise students with a wide range of theories and research investigating human factors. As an advanced course, the course normally covers all the areas specified in the syllabus, but students wishing to concentrate especially on particular topic areas may do so by agreement with the instructor as a part of project/practicum portion. The course has been developed to be as interesting and challenging as possible. The following are the objectives of the course: 1. To develop understanding of the breadth of different approaches to human factors practices. 2. To gain awareness of the principles and perspectives of human factors through the study of theories, concepts, and research. 3. To develop the ability to apply human factors research to real-world issues. 4. To understand how to critically appraise concepts, theories, and empirical evidence. 5. To be familiar with a range of research methods.
7.	Course Syllabus	**Understanding Human Factors:** Introduction and Background to Human Factors, Defining Design, System Thinking, and Sociotechnical System. **Human System Interaction: Affective and Cognitive Processes in System Development, Design, and Evaluation:** User & Interactive Systems, User Cognition, Emotion, HCI, Complex Systems, Human Error, Human Performance, Human Centered Engineering, Usability & Human-Centered Systems Design. **Cognitive Ergonomics:** Visual Cognition & Attention, Eye Movement, Visual Perception, and Computer Vision Syndrome. **Ergonomics Standards:** Displays, The EC directives, Technical standards. **Strategic Practices:** Social & Cultural Contexts, Design thinking, Business Design, Social Innovation, Democratic Design, Transformation. **Research Practitioner:** • Research Methods, Usability Evaluation, Reporting, Recent Developments. • Professional Issues: ISE, HFES; EACE, FEES, IEA, EAEFS, SEAES, SEANES, BCPE; Accreditation; Training & Employment.

5.	Pre–requisite, if any	Discrete Mathematical Structures, Design and Analysis of Algorithms, Computational Intelligence
6.	Scope of the Course	After having basic knowledge of artificial intelligence related to neural, fuzzy and evolutionary approaches, advancements in different areas are to be covered with working in a specific domain. This is by taking a case study to come up with the implementation and results.
7.	Course Syllabus	**Review on Mathematical and theoretical methods on soft computing**: neural networks. RBF structures. Self- organizing networks and methods. Fuzzy logic. Support vector machines and kernel methods. Evolutionary algorithms. **Hybrid Intelligent Systems:** Neuro-fuzzy systems. Neuro-Genetic systems, Evolving neural systems. Neuro-swarm. Hybridization with novel computing paradigms: Quantum computing, DNA computing, membrane computing. Neural dynamic logic and other methods, etc. **Learning and adaptation for novel:** Adaptive systems. Imitation learning. Reconfigurable systems. Supervised, unsupervised, Semi-supervised, reinforcement and statistical algorithms. Stability and convergence analysis. **Applications:** Image and signal processing. Ambient intelligence. process control, and manufacturing. Biometry and bioinformatics. Data mining. Internet modeling, communication and networking. Intelligent systems in education. Human–robot interaction. Time series analysis and prediction etc.

5.	Pre-Requisite, if any	UG level courses on Operating Systems, Computer Architecture and Computer Networks
6.	Scope of the Course	To study the technology behind the cloud computing methodology. The course would include many cloud computing service models namely *IaaS*, *SaaS*, and *PaaS* and cloud computing deployment models such as public Cloud, private Cloud and hybrid Cloud. Further, with the exponential growth in Cloud computing services, there is a need to understand the various issues that affect the different stakeholders of Cloud computing. The success story of the cloud computing not only depends on the underlying technology but also on the economics of the Cloud computing resource market. Hence, in this course, we would also cover the concept of Service Level Agreement (SLA), SLA matching techniques, cloud resources management, resource provisioning and sharing, pricing strategies, monitoring risk, trust, and Quality of Service (QoS) etc.
6.	Course Syllabus	**History of Cloud Computing:** Paradigms in Computing, Parallel Computing, Distributed Computing, Grid Computing, Service Computing; Service Oriented Architecture (SOA), Web Services **Cloud Computing:** Definition, Characteristics, Architecture, Components, Service Models, Deployment Models, Virtualization: Server, Storage, Network, Desktop; Hypervisor, Virtual Machine, Multi-tenancy, Opportunities and Risks **Service Level Agreement (SLA):** Definition, Types of SLA, SLA Life Cycle, Issues Related to Cloud SLA, SLA Frameworks: WS-Agreement, WSLA, WSOL, Slang, Bilateral Protocol; Translation of SLAs into Monitoring Specifications, Dynamic Creation of Monitoring Infrastructures, Penalty Management, Runtime Prediction **Cloud Security:** Cloud Security Fundamentals, Vulnerability Assessment, Security and Privacy in Cloud, Cloud Computing Security Architecture: Identity Management and Access Control, Autonomic Security; VM Specific Security Techniques **Cloud Application Programming Models:** Cloud File Systems: GFS and HDFS, BigTable, Hbase and Dynamo; Map Reduce Programming Model, Hadoop: Hadoop Fundamentals, Hama and other Hadoop Related Services **Cloud Application Development Platforms:** Xen Hypervisor, Amazon Web Service, Windows Azure, Google App Engine, Eucalyptus, Open Stack, Open Nebula
7.	Suggested Books	1. A. T. Velte, **Cloud Computing - A Practical Approach**, McGraw Hills 2. P. Wieder and J.M. Butler, **Service Level Agreements for Cloud Computing**, Springer 3. C. 4.	Name of the Concerned Discipline	Computer Science and Engineering
5.	Pre–requisite, if any	UG Level course on Software Engineering and Computer Networks
6.	Scope of the course	To understand the technical as well as management aspects of service-oriented systems. Emphasis would be on the most common realization of service-oriented systems i.e. web-services
7.	Course Syllabus	• **Introduction:** service explosion in the world, independent services, 'servitization' of products • **Service-oriented systems:** understanding the 'register, find, bind' triangle, loose coupling, Software-as-a-Service, Governance issues Practical realization of service-oriented systems via web services, basics of xml and its use in web-service implementation, http protocol, utility of web-services • **Basic web services stack:** understanding the SOAP protocol, WSDL, UDDI registry. Implementation of web services using the basic web services stack • **Representational State Transfer (REST) web services:** implementation of RESTful web services, REST constraints, comparison of this approach of web-service implementation with that of the basic web-service stack, advantages and limitation of RESTful web services • **Service composition:** understanding of the concepts of service orchestration and service choreography, static versus dynamic service composition, assessment of quality in service compositions, appropriate service selection for compositions, role of the customer in service composition
	Suggested Books	1. J. Snell, D. Tidwell, P. Kulchenko. **Programming Web Services with SOAP,** O'Reilly 2. L. Richardson, S. Ruby, D. H. Hansson. **Restful Web Services,** O'Reilly 3. B. A. Christudas, M. Barai, V. Cacello. **Service-Oriented Architecture with Java,** Packt Publishing.

5.	Pre–requisite, if any	Discrete Mathematical Structures, Design and Analysis of Algorithms, Computer Networks
6.	Scope of the Course	To understand the basic concepts of cryptography, get familiarized with encryption and authentication protocols and look at system level security. We will study block ciphers, stream ciphers, hash functions and public key cryptography and security mechanisms in networks and Internet. In the process we will learn some number theory and algebra.
7.	Course Syllabus	**Introduction:** What is cryptography, classical ciphers, cryptanalysis. **Shannon's theory:** Concept of perfect secrecy, entropy **Symmetric-key Cryptography:** Pseudorandomness, Stream ciphers, Block ciphers, Data Encryption Standards, Advanced Encryption Standards, Modes of operation **Hash-functions:** Data Integrity, Merkle-Damgard construction, Message Authentication Codes **Number Theory:** Euclidean Algorithm, Chinese Remainder Theorem, Primality Testing algorithms, Factoring algorithms **Public-key Cryptography:** RSA, Discrete log problem, Diffie-Hellman key exchange protocol, Signatures schemes Public key Infrastructure, Digital certificates **Network Security:** Network security at application,Security issues in electronic mail, IP Security, Web security, transport layer security and Secure Socket Layer, intrusion detection, malicious software, viruses, worms and related threats, firewalls, trusted systems.
8.	Suggested Books	**Suggested Textbook:** 1. D. R. Stinson: **Cryptography theory and practices**, 3rd Edition, CRC Press, (2006) 2. W. 6.	Scope of the course	To understand the principles of systems security from an applied viewpoint and obtain hands-on experience on security threats and counter-measures. To study operating systems security, advanced topics on network security, access control and digital rights management, web security and usable security. After the completion of the course, the student will have sound understanding of practical aspects of security and will be able to analyze and design the secure systems.
7.	Course Syllabus	**Introduction:** Computer Security Concepts, threats, Attacks, and Assets **Malicious Software:** Types of Malicious Software (Malware), Infected Content–Viruses, Vulnerability Exploit–Worms, Social Engineering–SPAM E-mail, Trojans, System Corruption, Zombie, Bots, Information Theft–Keyloggers, Phishing, Spyware, Stealthing–Backdoors, Rootkits. **Operating System Security:** System Security Planning, Application Security, Linux/Unix Security, Windows Security, Virtualization Security **Access Control:** Access Control Principles, Subjects, Objects, and Access Rights, UNIX File Access Control, Role-Based Access Control, Attribute based Access Control. **Database Security:** The Need for Database Security, Database Management Systems, Database Access Control, Statistical Databases, Private Information Retrieval, Cloud Security. Digital Rights Management: Multicast security, copyright protection, Digital Finger printing. **Web Security:** Secure E-mail and S/MIME, Domain Keys Identified Mail, Secure Sockets Layer (SSL) and Transport Layer Security (TLS), HTTPS, Ipv4 and Ipv6 Security, Internet Authentication Applications, Kerberos, X.509, Public-Key Infrastructure, Federated Identity Management. **Wireless Security:** Wireless Security Overview, IEEE 802.11 Wireless LAN Overview, IEEE 802.11i Wireless LAN Security. **Usable Security:** Introduction to privacy, trust and semantic security, Visualizing privacy, Web browser security and privacy, Authentication and text passwords, biometrics and graphical passwords.

4.	Name of the Concerned Discipline	Computer Science and Engineering
5.	Pre–requisite, if any	
6.	Scope of the course	Objective of this course is to understand and create artificial vision systems which can reliably extract information from images. Study of vision problems require the basic understanding of image formation, image representation, ways of analyzing the images and patterns present in them. This course aims at providing the knowledge at all these fronts.
7.	Course Syllabus	**Digital Image Processing:** Fundamentals, Types of Image Processing, Image Acquisition Methods, Human Perception of Color and Images, Transformations: Orthogonal, Euclidean, Affine, Projective etc. **Low-level Image Processing:** Image Enhancement in Spatial Domain – Histogram Processing, Contrast Stretching, Log Transformation, Gamma Correction, Smoothing and Sharpening; Logical and Arithmetic Operations, Morphological Image Processing, Image Enhancement in Frequency Domain, Fourier Transform, Convolution and Filtering, Image Restoration. **Image Feature Extraction:** Edge detection – Canny, Sobel, Prewitt, LOG, DOG, Line detector: Hough Transform; Corner detectors – Harris and Hessian Affine; Orientation Histogram, SIFT, SURF, HOG, GLOH, Scale-Space Analysis – Image Pyramids and Gaussian derivative filters, Gabor Filters and DWT. **Image Segmentation:** Edge Based Approaches to Segmentation, Region Growing, Texture Segmentation, Object Detection and Segmentation: Graph-cuts, Active Contours, Mean-Shift. **Object Recognition:** Structural Approaches, Model-based Approaches, Appearance and Shape-based Approaches, Probabilistic Paradigms. **Pattern Analysis:** Clustering: K-Means; Gaussian Mixture Model (GMM); Classification – Discriminant Function, Supervised, Semi-supervised, Unsupervised; Classifiers: Bayes, KNN, ANN models; Dimensionality Reduction: PCA, LDA, ICA; Non-parametric methods. **Motion Analysis:** Background Subtraction and Modeling, Optical Flow, KLT, Spatio-Temporal Analysis. **Applications and Performance Measures:** CBIR, CBVR, Activity Recognition, Biometrics, Document processing, Super-resolution, Augmented Reality, Security and Surveillance, Performance Evaluation Measures.

1.	Course Code	**CS 620/ CS 420**
2.	Title of the Course	**Embedded Systems**
3.	Credit Structure	L-T- P-Credits 2-1-0-3
4.	Name of the Concerned Discipline	Computer Science and Engineering
5.	Pre–requisite, if any	Programming knowledge, Computer Architecture, Operating Systems. CSE students take these subjects in their I, II and III years.
6.	Scope of the course	Embedded systems are becoming more and more ubiquitous and pervasive in our day to day life. Their applications range from domestic household appliances, health-care, defense, transportation, space technology, gaming, infotainment, mobiles, energy generation, etc. Research reports1 reveal that 99% of the microprocessors/software produced annually end up in embedded systems/applications. The course will focus on software issues in embedded systems. It will include demonstrations and getting acquainted with 8/16/32-bit micro-controller and its development environment (starter kits, appropriate compilers and flashers), interrupt programming, resource management, and peripheral interfacing & drivers. The practical part will involve demos and getting started kind of exercises to show the tangible side of taught concepts.
7.	Course Syllabus	1. Introduction to embedded systems: Embedded vs. General purpose computer Systems; Abstract Model; computer-plant interaction and real-time reactive behaviour of embedded control systems. 2. Sequential and continuous control systems; 3. Basic modeling and implementation techniques for sequential and continuous control systems - state machines, function blocks and function block diagrams, which is followed by advanced modelling techniques for complex systems, such as hierarchical and concurrent state machines and hybrid models; 4. Real-time operating systems (RTOS), Real-time kernels, Deploying applications on RTOS/Kernels.

Course Structure

of

MTech, MTech+PhD Dual Degree and

PhD Program in

Electrical Engineering and

Syllabi of Courses

Course Structure of MTech / MTech + PhD Dual Degree Program in Communications and Signal Processing (CSP)

Qualifying Degree: 1. BE/BTech or equivalent degree in Electrical or Electronics and Communication or Electronics and Instrumentation or Telecommunication or Computer Science and Engineering or Information Technology; **AND** 2. GATE qualification in Electronics and Communication (EC).

IIT graduates with 7.0 or more CPI/CGPA are exempted from GATE qualification.

Eligibility: First class in the qualifying degree i.e. (i) A minimum of 60 % marks for GEN/OBC (55% for SC/ST) category in aggregate or as specified by the university/institute **OR** (ii) A minimum CPI of 6.0 for GEN/OBC (5.5 for SC/ST) category on the scale of 10; with corresponding proportional requirements when the scales are other than on 10 (for example 4.8 for GEN/OBC category (4.4 for SC/ST) on a scale of 8) **OR** (iii) A first class as specified by the university/institute.

Selection criteria: GATE Score + Interview.

Category of Admission: (i) TA: Teaching Assistantship ((ii) **IS:** Institute Staff on part-time basis; (iii) **SW:** excellent eligible sponsored candidates (without MHRD TA ship) from the reputed R & D Organizations and Industry on full-time and part-time basis; (iv) **DF**: Candidates from the Defense Forces.

@ In addition to this course list, a student can also opt from the PG courses being offered by the other disciplines.

NOTE: 1. Request for conversion from MTech to Mtech + PhD dual degree will be considered after evaluating the research potential of the promising and motivating PG students at the end of the **third semester of their program.**

2. If a student opts for the Dual Degree Programme but cannot complete the requirements of a PhD, an **exit option** with the MTech degree can be earned at the end of the final semester of the normal M.Tech. Programme by getting the M.Tech. Research Project examined in the standard manner as per the requirements for the award of an MTech degree.

3. The enhancement in the scholarship will be from the beginning of the fifth semester or from the date on which all requirements for the award of Mtech degree are fulfilled, whichever is later**.**

5.	Pre-requisite, if any	Courses on Electronic Devices, and VLSI Systems and Technology
6.	Scope of the Course	Motivation of this course is to provide a brief background on the evaluation on the memory technologies (both optical/ electronic). In addition to that this course will cover sufficient technical knowledge on non-volatic and voltaic memories. Further an over view of emerging memory technologies and their importance towards future memory technology will be discussed.
7.	Course syllabus	**Introduction to memory devices**: Evolution and history; archival data storage; advances in optical memories. **Nonvolatile memories:** Magnetic memories, HDDs; Silicon based thin film transistor nonvolatile memories; Flash memories, classification and operation; challenges; advancements. **Volatile memories:** Random access memories, classification and operation; SRAMs; DRAMs; history and challenges. **Emerging memory technologies:** Phase Change Memory (PCM); Magnetoresistive Random Access Memory (MRAM); Ferroelectric Random Access Memory (FeRAM); Comparison and future directions.

7.	Course Syllabus	Background towards molecular electronics, surfaces and interfaces, structures and organization. Introduction to Schrodinger equation, Hartree-Fock Theory, Density Functional Theory. Molecular Solids, π-conjugated polymers, one dimensional band structure of linear conjugated polymers, optical absorption and emission in conjugated oligomers/polymers. Device motivation for interface studies, Metal-semiconductor and Metal-Insulator-Semiconductor Interface. Charge transport in conjugated polymers. Hopping and Multiple trap and release model. Interface effects viz. Dipole, doping, band bending etc. in organic semiconductor devices. Materials and Interface Engineering in Organic Light Emitting Diodes (OLEDs). OLED materials and device architecture for full color displays and solid state lighting. Theory and operation principle of Organic Field Effect Transistors (OFETs). Interface Characterization, Threshold Voltage and subthreshold swing and charge carrier mobility in OFETs. Application of OFETs in Displays. Organic Photovoltaic Devices (OPDs) using Polymer-Fullerene Bulk heterojunction thin films. Interface effects and improvement in Polymer Solar Cells (PSCs) efficiency. Introduction to some other advanced concepts viz. Organic electrochromic materials and devices, multiphoton absorbing materials and devices and Nonvolatile Organic Thin Film Memory Device.

5.	Pre–requisite, if any	Basic knowledge of Fourier analysis
6.	Scope of the Course	Many signals exhibit frequency characteristics that change over time. Examples include such as speech, marine mammal sounds, heart rate, electroencephalogram, machine vibrations, sonar, radar, and communication signals. Understanding these changes is important because they are often indicative of the underlying processes that generated the signal. Time-frequency analysis, also called time-varying spectral analysis, is a technique for studying the time-dependent spectral changes in a signal.
7.	Course Syllabus	Basics of Fourier Analysis, Spectral Theory, Fundamentals of Time-Frequency Analysis, Instantaneous Frequency and Instantaneous Bandwidth, Gabor Transform, The Short-Time Fourier Transform/Spectrogram, Time-Frequency Localization, Continuous Wavelet Transform/Scalogram, Multiresolution Analysis, Quadratic Time-Frequency Transform, Wigner-Ville Distribution, Signal Processing Applications, Image Processing Applications.

Course Structure

of

MTech, MTech+PhD Dual Degree and

PhD Program in

Mechanical Engineering and

Syllabi of Courses

Course Structure of MTech / MTech + PhD Dual Degree Program in Production and Industrial Engineering (PIE)

Qualifying Degree: 1. BE/BTech or equivalent degree in Mechanical, Production, Industrial, Manufacturing, Materials and Metallurgy, Mechatronics, or Automobile Engineering; **AND** 2. GATE qualification in Mechanical or Production and Industrial Engineering

IIT graduates with 7.0 or more CPI/CGPA are exempted from GATE/ CSIR-JRF qualification.

Eligibility: The **first class** in the qualifying degree i.e. (i) A minimum of 60 % marks for GEN/OBC (55% for SC/ST) category in aggregate or as specified by the university/institute **OR** (ii) A minimum CPI of 6.0 for GEN/OBC (5.5 for SC/ST) category on the scale of 10; with corresponding proportional requirements when the scales are other than on 10 (for example 4.8 for GEN/OBC category (4.4 for SC/ST) on a scale of 8) **OR** (iii) A first class as specified by the university/institute.

Selection criteria: GATE Score + Interview.

Category of Admission: (i) TA: Teaching Assistantship (ii) **IS:** Institute Staff on part-time basis; (iii) **SW:** excellent eligible sponsored candidates (without MHRD TA ship) from the reputed R & D Organizations and Industry on full-time and part-time basis; (iv) **DF:** Candidates from the Defence Forces.

@ In addition to this course list, a student can also opt from the PG courses being offered by the other disciplines.

NOTE: 1. Request for conversion from MTech to MTech + PhD dual degree will be considered after evaluating the research potential of the promising and motivating PG students at the end of the **third semester of their program.**

2. If the student opts for the Dual Degree Programme but cannot complete the requirements of a PhD, an **exit option** with the MTech Degree can be earned at the end of the final semester of the normal MTech Programme by getting the MTech Research Project examined in the standard manner as per the requirements for the award of an MTech degree.

3. The enhancement in the scholarship from MTech to PhD will be from the beginning of the fifth semester or from the date on which all requirements for the award of MTech degree are fulfilled whichever is later**.**

Note

1. A PhD student having **MTech/ME//MPhil** qualification has to do one semester coursework (with 2-3 PhD level courses). Minimum number of courses will be 2 PhD level courses and one PhD seminar course i.e. *(minimum coursework of 8 credits)*.
2. A PhD student having **BTech/ BE / MSc or equivalent qualification** admitted to PhD programme in an **Engineering discipline** shall do 6-8 courses of at least 3 credits each and 1-2 PhD Seminar courses of at least 2 credits each. Minimum number of courses will be 6 PhD level courses and one PhD seminar course *(minimum coursework of 20 credits).*

   * PhD Seminar course can be taken either in Autumn or in Spring Semester or both as suggested by the Faculty Advisor/Thesis Supervisor.

Mechanical Engineering Courses for Electives-I to VI *(in addition to these courses, the students can also take courses from other disciplines.)*

6.	Course Syllabus	**Basics of Measurement Systems:** Introduction, Classification of measurement systems, Errors in measurements, Statistical analysis of measured data, Regression analysis, Introduction to uncertainty, uncertainty analysis, Estimation of overall uncertainty, Presentation of data, Design of experiments. **Measurement of Fundamental Quantities:** (I) Measurement of Temperature: Science and art of temperature measurement, Temperature measurement by mechanical effects, Thermo electric thermometry, Resistance thermometry, Pyrometer, Measurement of transient temperature, systematic errors in temperature measurement, Laboratory practice. (ii) Measurement of Pressure: Manometers, Bourdon gauge, Pressure transducers, Measurement of transient pressure, Measurement of vacuum, Laboratory practice. (iii) Measurement of Flow Velocity: Pitot static and impact probes, Velocity measurement based on thermal effects, Doppler velocimeter, Laboratory practice. **Measurement of Derived Quantities:** (I) Measurement of Heat flux and Heat Transfer Coefficient: Foil type heat flux gauge, Thin film sensors, Cooled thin wafer heat flux gauge, Axial conduction, Guarded probe, Slug type sensor, Film coefficient transducers, cylindrical heat transfer coefficient probe, Laboratory practice. (ii) Measurement of Volume Flow Rate: Variable area type flow meters, Rota meter, Miscellaneous type of flow meters, Factors to be considered in the selection of flow meters, Calibration of flow meters, Laboratory practice. (iii) Measurement of Stagnation and Bulk Mean Temperature: Introduction, Shielded thermocouple stagnation temperature probe, Dual thin film enthalpy probe, flow in rectangular duct, Laboratory practice. **Measurement of Thermo-physical Properties, Radiation Properties of Surfaces and Gas Concentration:** (I) Measurement of Thermo-physical Properties: Thermal conductivity- steady and transient methods, Measurement of heat capacity, Calorific values of fuel, Viscosity of fluids, Laboratory practice. (ii) Measurement of Radiation Properties of Surfaces: Introduction, Features of radiation measuring instruments, Integrating sphere, Measurement of emissivity, Laboratory practice. (iii) Measurement of Gas Concentration: Introduction, Non separation methods, Separation methods, Laboratory practice. **Measurement of Other Engineering Quantities:** Fundamentals of measurements of force, torque, strain, vibration, noise, surface roughness, geometrical or form tolerances. **Data Acquisition, Manipulation and Presentation:** Introduction, Mechanical signals conditioning, Electrical signal conditioning, Examples from laboratory practices.

6.	Course Syllabus	**Conduction:** Derivation of energy equation for conduction in three dimensions – Initial and boundary conditions. Transient conduction-Concept of Biot number – Lumped capacitance formulation unsteady conduction from a semi-infinite solid-solution by similarity transformation method. Solution of the general 1D unsteady problem by separation of variables, Laplace equation – solution by variable separable method – concept of superposition and homogeneous boundary conditions. Numerical solution of conduction problems-Basic ideas of finite difference method – forward, backward and central differences – Discretization for the unsteady heat equation. **Convection:** Derivation of governing equation for convection. 2D laminar coquette flow and nondimensional numbers. Concept of Adiabatic wall temperature. Integral methods for momentum and thermal boundary layers. Pipe flow – concept of developed temperature profile and solutions for constant wall flux and constant wall temperature boundary conditions. Solution of entry length problem for constant wall and constant wall flux boundary conditions. Natural convection – governing equation, integral solution for flat surface. **Radiation:** Introduction. Concept of black body, derivation of black body radiation laws from first principles Need for view factors, concept of view factors, mathematical definition. Shape factor calculations. Radiosity, Irradiation method for gray diffuse enclosures. Gas Radiation.

Air stand, fuel-air and actual cycles for SI and CI engines. Engine performance parameters. Valve and port timing diagrams. **Combustion:** *In SI Engines* - Combustion initiation, Flame development and propagation, ignition lag, preignition, normal and abnormal combustion-knocking, physical and chemical aspects of knocking, effect of operating parameter and chemical structure on knocking tendency, Octane number, design considerations of combustion chamber, Stratified charge combustion, Concept of lean burning engines. *In CI Engines***-** Various stages of combustion-Vaporization of fuel droplets and spray formation **Engine Accessories:** *SI Engines* - Carburetors**,** Properties of air-fuel mixtures, mixture requirement, Main metering system, Idling system, Economizer system, acceleration pump and cold starting system. Spark plug, fly wheel, DTS-I system. Nozzle lip, venturi depression, calculation of fuel jet and venturi throat diameter for given air fuel ratio, Battery and magneto ignition system and their comparative study, firing order, Ignition timing, Petrol Injection system, electronic fuel injection, advantage and disadvantage of petrol injection. *CI Engine*- Fuel pump, types of fuel injector, fly- wheel, types of piston and properties, high pressure pipe, Governor- Necessity of governing, various methods of governing. Fuel injection system- Requirement, types of nozzle, atomization, spray penetration and spray direction, multiple point fuel injection system, injection timing, common rail fuel injection system. **Cooling and Lubrication Systems:** Cooling requirement, air cooling, liquid cooling, type of liquid cooling system, advantage and disadvantage of air cooling and water cooling system, Antifreeze mixture. Function of lubricating system, properties of lubricating oil, wet sump, dry sump and mist lubrication system. **Fuels:** Basic requirement of I.C. Engine fuels, requirement of an ideal gasoline, structure of petroleum, effect of fuel structure on combustion, volatility of liquid fuels, effect of volatility on engine performance for starting, vapor lock, acceleration, percolation, carburetor icing, and crank case dilution, Alternative fuels-Bio Diesel types, Compressed Natural Gas, Hydrogen Energy- Solid, Liquid, Gas. Fuel Cells. **Emissions:** Emissions from SI and CI engines, types of emission gasses, emission control system, types of emission control system, EGR system.

6.	Scope of the course	The objectives and scope of this course are to develop in mechanical engineering graduate students the knowledge and skills required • To establish the fundamental techniques for understanding the nonlinear control schemes used in robotic fields. • To analyze and design control system models in the state space approach. • To develop an understanding of robotic control systems and the parameters that influence their stability and performance. • To aware and get exposure on virtual and numerical environments, for designing and verifying nonlinear control schemes.
7.	Course Syllabus	Introduction and overview of robotic systems and their dynamics. Forward and inverse dynamics. Properties of the dynamic model and case studies. Introduction to nonlinear systems and control schemes. System stability and types of stability. Lyapunov stability analysis, both direct and indirect methods. Lemmas and theorems related to stability analysis. Joint space and task space control schemes: Position control, velocity control, trajectory control and force control. Nonlinear control schemes: Proportional and derivative control with gravity compensation, computed torque control, sliding mode control, adaptive control, observer based control, robust control and optimal control. Observer based on acceleration, velocity and position feedbacks. Numerical simulations using software packages namely MATLAB/MATHEMATICA. Virtual prototype making and inverse dynamic simulation on ADAMS (Multibody dynamics software).

5.	Pre–requisite, if any	Kinematics & Dynamics
6.	Scope of the Course	The objectives of this course are to develop in mechanical engineering students the knowledge and skills required • To establish the fundamental techniques for modelling dynamic systems. • To analyse and manipulate system models in the time and frequency domain. • To develop an understanding of feedback control systems and the parameters that influence their stability and performance.
7.	Course Syllabus	**Dynamic Modelling of Systems:** Introduction to Dynamics, Systems and Control. Dynamic modelling of systems. Lumped system. Modelling of translational and rotational mechanical spring-mass-damper systems. Nonlinear systems and Linearization of nonlinear systems. Numerical computations and simulations with MATLAB / MATHEMATICA, and simulations in MSC ADAMS. **Analysis of Linear Systems:** Introduction, Laplace transform, Transfer functions, System response, Stability analysis, Routh-Hurwitz criteria. Time domain analysis: Root locus method. Frequency domain analysis: Bode plot and Nyquist plot. Numerical computations with MATLAB. **Linear Feedback Control Systems:** Lead and Lag compensator, Design and analysis of linear feedback control systems using time and frequency domain techniques. Numerical computations with MATLAB. Proportional (P), proportional-derivative (PD), proportional-integral (PI) and proportional-integral-derivative (PID) controller, Gain tuning methods and modifications. Case studies on PID Controller and its applications. **Analysis of Systems in State Space:** Concept of state and state variables. State space representation of dynamic systems. State models of linear time invariant systems, State transition matrix, and Solution of state equations. Controllability and Observability. Numerical computations with MATLAB. **State Space Controllers and Observers for Linear systems:** Full state feedback controller and Pole placement technique. Design of full state feedback controller. State observer and design of state observer with controller. Numerical computations and simulations with MATLAB.

9.	Lab	Apply readily available software packages for solution of management problems. Summarize and present analysis of results in a clear and a coherent manner.

1.	Course Code	**ME 672 / ME 472**
2.	Title of the Course	**Reliability Engineering**
3.	Credit Structure	L-T- P-Credits 2-0-2-3
4.	Name of the Concerned Discipline	Mechanical Engineering
5.	Pre–requisite, if any	Basic knowledge of probability and statistics
6.	Objective of the course	To introduce the various concepts of reliability, and its applicability to different products and processes. Also, to introduce the concepts of availability and maintainability.
6.	Course Syllabus	**Fundamentals of reliability:** Scope of reliability engineering, concept of bath tub curve, types of failure data, reliability estimations, constant failure rate models, time dependent failure rate models, concept of failure on demand. **System reliability assessment:** Reliability estimation of series/parallel/mixed/complex system configurations. **Design for reliability:** Capturing user's reliability requirements, reliability and/or redundancy allocation/optimization, design methods, FMEA/FMECA, reliability testing (burn-in testing, reliability assurance testing, reliability growth testing, accelerated life testing), fault tree analysis. **Availability assessment:** Point, mission and steady state availability, Markov modeling approach for availability estimation. **Maintainability and maintenance:** Maintainability assessment, and design for maintainability, concept of maintenance, types of maintenance, maintenance optimization. **Warranty management:** Types of warranty, reliability and warranty. **Practical applications of reliability engineering to systems, products and processes:** Case studies
7.	Suggested Books	1. C. Ebeling, **An Introduction To Reliability and Maintainability Engineering,** Waveland Prentice Hall Inc. 2009, ISBN: 0070188521. 2. I. Chemistry Courses for Elective-I to VI *(in addition to these courses, students can take courses from the other disciplines also)*

S. No.	Course Code	Course Name	L-T-P-Credits
1.	CH 701	Spectroscopic Techniques	2-1-0-3
2.	CH 704	Chemistry at Surfaces and Interfaces	3-0-0-3
3.	CH 705	Materials Chemistry	2-1-0-3
4.	CH 706	Photochemistry	2-1-0-3
5.	CH 708	Catalysis: Approaches and Applications	2-1-0-3
6.	CH 709	Advanced Bioinorganic Chemistry	2-1-0-3
7.	CH 710	Molecular Modeling and Computational Chemistry	2-1-0-3
8.	CH 711	Bio-Organic and Medicinal Chemistry	2-1-0-3
9.	CH 720	Asymmetric Synthesis	3-0-0-3

NOTE:

1. A PhD student having **MSc/ BTech/ BE or equivalent qualification** has to do 5 to 7 PhD level courses of at least 3 credits each and 1-2 PhD seminar courses of at least 2 credits each. Minimum number of courses will be 5 PhD level courses and one PhD seminar course *(minimum coursework of 17 credits).*
2. A PhD student having **MTech/ME//MPhil** qualification has to do one semester coursework (with 2-3 PhD level courses). Minimum number of courses will be 2 PhD level courses and one PhD seminar course (i.e. *(minimum coursework of 8 credits)*.

* PhD Seminar course can be taken either in Autumn or in Spring Semester or both as suggested by the Faculty Advisor/Thesis Supervisor.

1.	Course Code	**CH 601**
2.	Title of the Course	**Quantum Mechanics and Group Theory**
3.	Credit Structure	L-T-P-Credit 2-1-0-3
4.	Name of the Discipline	Chemistry
5.	Pre–requisite, if any	Nil
6.	Scope of the Course	The purpose of this course is to provide an introduction to the quantum chemistry, which uses high-level mathematics as a tool to understand atomic, molecular structure and properties, as well as chemical reactivity. In addition group theory tells us about molecular shapes, symmetry and selection rules used in spectroscopy.
7.	Course Syllabus	**Quantum Chemistry:** Basic concepts of calculus, vectors and matrices, black body radiation, classical wave equation, Schrödinger wave equation, models in quantum chemistry: particle in a box, harmonic oscillator and rigid rotor, theorems in quantum chemistry, spherical harmonics, approximation methods: variation and perturbation methods, multi electron atoms, atomic term symbols, di-atomic molecules, Born-Oppenheimer approximation, LCAO and molecular orbital theory, introduction to Hartree-Fock, computational quantum chemistry. **Group Theory:** Symmetry Operations, Point Groups, Construction of Character tables, Reducible and irreducible representation, Representation of molecular orbitals, Chemical applications: molecular shapes, selection rules in spectroscopy.
8.	Suggested Books	**Text Books** 1. P. W. Atkins, **Molecular Quantum Mechanics**, Clarendon Press, Oxford, 1980. 2. I. N. Levine, **Quantum Chemistry**, 4th Edn., Prentice Hall of India Pvt. Ltd., New Delhi, 1995. 3. D. A. McQuarrie, **Quantum Chemistry**, University Science Books, 1983. **Reference Books** 1. A. K. 1.	Course Code	**CH 602**
2.	Title of the Course	**Thermodynamics, Kinetics and Electrochemistry**
3.	Credit Structure	L-T-P-Credit 2-1-0-3
4.	Name of the Discipline	Chemistry
5.	Pre–requisite, if any	Nil
6.	Scope of the Course	The objective of this course involves introduction to concepts of thermodynamics and kinetics and their application to various chemical systems.
7.	Course Syllabus	**Chemical Thermodynamics and Kinetics**: Differential calculus, properties of gases, Vander Waals and Rddlich-Kwong equation, second virial coefficients, Lennard-Jones interatomic potential, kinetic theory of gases, laws of thermodynamics, Helmholtz and Gibbs energies, Maxwell relations, phase equilibrium, chemical potentials, partial molar quantities, Gibbs-Duhems equation, solid-liquid solutions, Debye-Huckel theory, Chemical equilibrium and Van't Hoffs equation. Theories of reaction rates: application to uni-, bi- and intermolecular reactions, thermodynamic formulation of reaction rates, Kinetic isotope effect, reactions in solution-cage effect, diffusion and activation controlled reactions. **Statistical Thermodynamics:** Introduction to statistical methods, Boltzmann factor, partition function, generalized ensembles: micro-canonical, canonical and grand-canonical, applications of statistical methods to evaluate: mean energies, heat capacities, residual entropies and free energies. **Electrochemistry:** Introduction, Ion-solvent interaction, Born model and Born equation. Enthalpy of ion-solvent interaction and its calculation, solvation number, ion association, the rates of electron transfer processes, Theory of electron transfer processes: electron tunnelling, processes at electrode: electrode-solution interface, Butler-Volmer equation, current-overpotential relationship, voltametry, electrolysis.
8.	Suggested Books	**Text Books** 1.Peter A. Rock, **Chemical Thermodynamics**, University Science Books, 2003 2. T. L. 1.	Course Code	**CH 604**
2.	Title of the Course	**Molecular Spectroscopy**
3.	Credit Structure	L-T-P-Credit 2-1-0-3
4.	Name of the Discipline	Chemistry
5.	Pre–requisite, if any	Nil
6.	Scope of the Course	This course provides theoretical aspects for various spectroscopic techniques such as emission, absorption, scattering and NMR. In addition statistical mechanics provides a probabilistic approach to equilibrium properties of large numbers of degrees of freedom in atoms and molecules.
7.	Course Syllabus	**Molecular spectroscopy:** Introduction to spectral energy domains and measurement of spectra, Implications of discrete energy levels, Population of States–Boltzman Distribution, Interaction of radiation with matter, Electronic spectroscopy (UV-visible, fluorescence and phosphorescence):Simple chromophoric groups, conjugated and aromatic systems. Characteristic absorption and emission of organic and inorganic compounds. origin of line-widths in molecular spectra, Transition dipole moment and Fermi's Golden Rule, Einstein's Coefficients, Lasers and Masers; Rotational (Microwave) spectroscopy, Molecular vibrations - Infrared spectroscopy, Normal mode analysis, Raman Scattering, Selection Rules from Group Theory, Molecular electronic spectra, Photo-physical processes, Non-Linear Spectroscopy, NMR spectra: theory, relaxation process, instrumentation, chemical shift and shielding, factors contributing to magnitude of shielding, spin interactions its origin, equivalent protons, qualitative idea of energy levels of AX and A_2 systems, a few representative example.

2.	Title of the Course	**Structural Organic Chemistry**
3.	Credit Structure	L-T-P-Credit 2-1-0-3
4.	Name of the Discipline	Chemistry
5.	Pre–requisite, if any	Nil
6.	Scope of the Course	Students will become familiarized with the modern theories and instrumental techniques employed to understand the fundamentals of structure, bonding and reactivity in organic molecules.
7.	Course Syllabus	MO treatment of acyclic and cyclic conjugated systems, Huckel rule and concept of aromaticity; annulenes, heteroannulens, fullerenes (C60), alternate and non-alternate hydrocarbons, anti-aromaticity, pseudo-aromaticity, homo-aromaticity, Frost diagram, Huckel treatment – applications to ethylene, allyl, cyclopropenyl, butadiene, cyclobutadiene, Importance of antibonding orbitals in organic reactions. **Photochemistry:** Basic principles, Jablonski diagram, photochemistry of olifinic compounds, *Cis-trans* isomerization, Paterno-Buchi reaction, Norrish Type-I and II reactions, Photoreduction of ketons, di-π methane rearrangement, Photochemistry of arenas; Photoreactions in solid state, synthetic applications; cyclization of radicals **Pericyclic reaction:** Classification and stereochemical modes; Thermal and photopericyclic reactions, selection rules and stereochemistry of electrocyclic reactions, 2-component cycloadditions – antarafacial and suprafacial additions; Rationalization based on Frontier M.O. approach, correlation diagram, Dewer-Zimmermann approach, Mobius & Huckel systems; Claisen, Cope, Aza-Cope and Oxy-Cope rearrangements, Sommelet - Hauser, Ene reaction – Applications in Organic synthesis; Fluxional Tautomerism **Stereochemistry:** Effects of conformation on reactivity in acyclic compounds and cyclohexanes Conformation and reactivity of monocyclic systems-3 to 10 membered rings, 6-6, 6-5,6-4, 5-5 bicyclic systems, 6-6-6, 6-5-6, 5-6-5 and 5-5-5 tricyclic systems, enantioselective and diastereoselective synthesis, Addition to carbonyl compounds. Chirooptical properties of organic molecules: Origin, Theory of CD, ORD, their applications, haloketone rules, sector rules, helicity rules, excitation chirality. Chiral analysis by polarimeter, NMR, GC, HPLC and Capillary Electrophoresis (CE) methods, Baldwin's rules. **General Concept of Spectroscopy and their applications:** IR, NMR, MS

2.	Title of the Course	**Synthetic and Mechanistic Aspects of Organic Chemistry**
3.	Credit Structure	L-T-P-Credit 2-1-0-3
4.	Name of the Discipline	Chemistry
5.	Pre–requisite, if any	Nil
6.	Scope of the Course	To develop understanding of the intermediates involved in reactions and applications of variety of oxidizing, reducing and organometallic reagents in organic synthesis
7.	Course Syllabus	**Reactive intermediates** – Formation and stability of classical and non-classical carbonium ions, carbanions, carbenes, nitrenes, radicals and arynes; Nucleophilic, electrophilic and radical substitutions, addition and elimination reactions; Methods of determining reaction mechanisms, Kinetic isotope effect, Hard and soft acids and bases; Hammet equation. Mechanisms of some familiar name reactions: Robinson annulation, Peterson elimination, Stork enamine reaction, Mannich reaction, Sharpless asymmetric epoxidation, Barton reaction, Hofmann-Loffler-Freytag reaction, Shapiro reaction, Baeyer-Villiger reaction, Chichibabin reaction. **Oxidations in Organic Chemistry:** oxidative processes based on one-electron and two-electron oxidants, oxidations with Cr(VI) oxidants; Collin oxidation, PCC, PDC and PFC, DMSO-oxidations: Swern, Moffat, DMSO-SO_3 complex, DMSO-Ac_2O, Hypervalent iodine oxidations: Dess-Martin periodinane, IBX, iodobenzene diacetate, Oxidations with MnO_2, SeO_2, $Tl(NO_3)_3$, Ag_2O, RuO_4 and OsO_4, Shi-epoxidation. **Reductions in Organic Chemistry:** Different reductive processes, reduction with metal hydrides of B, Al, Sn and Si, catalytic and transfer hydrogenations, dissolving metal reductions, synthetically useful hydrogenolysis reactions, samarium and indium-based reducing agents, enzymatic and microbial reductions**.** **Organometallic Chemistry:** Applications of organotransition metals in organic synthesis-preparative, structural and mechanistic aspects, Davies rule, catalytic nucleophilic addition and substitution reaction, coupling reaction-Heak, stille, Suzuki coupling, Sonogashira, Zieglar natta reaction, olefin metathesis, Tebbe's Reagent, Pauson-Khand reaction, functional organometalllic compounds, use of indium and zinc. Organosilicon chemistry, synthetic uses of silyl ethers, silylenol ethers, TMSCl, TMSI, TMSCN, alkene synthesis, alkenyl, vinyl, aryl, allyl and acyl silanes, Brook rearrangement, silicon Baeyer Villiger rearrangement.

1.	Course Code	**CH 624**
2.	Title of the Course	**Total Synthesis and Natural Products Chemistry**
3.	Credit Structure	L-T-P-Credit 2-1-0-3
4.	Name of the Discipline	Chemistry
5.	Pre–requisite, if any	Nil
6.	Scope of the Course	To familiarize students with modern methods of natural product synthesis
7.	Course Syllabus	Modern approaches of synthesis of furan, thiophene, pyrrole, pyridine, quinoline, isoquinoline and indole; their reactivities, Synthesis and reactions of azidirines and azetidines. **Natural Products** Isoprene rule; Structure elucidation (by chemical and spectroscopical methods); synthesis, Biogenesis and Biosynthesis of representative examples of acyclic,12 monocyclic and bicyclic monoterpenes. Structural types – general introduction to sesqui, di-and tri-terpenoids. Familiarity with methods of structural elucidation (chemical and spectroscopical methods, biosynthesis, synthesis of alkaloids (ephedrine and atropine), **Steroids** – General methods of study and structural types, chemistry of cholesterol, hormones, bile acids, Vitamins of D-group, diosgenin. **Alkaloids**: Structure, transformation and biosynthesis of alkaloids from terrestrial and marine sources; chemistry of indole and peptide alkaloids **Carbohydrate:** Deoxysugars, amino sugars, glycal sugars and their synthetic aspects. Carbohydrates as chiral pools in organic synthesis **Total Synthesis:** Total synthesis of Longifolene, Reserpine, Juvabione, Aphidicolin and Fredericamycin A and prostaglandins (PGE2, PGF2α), Taxol. **Bio-Organic Chemistry:** Enzymes and antibodies (syntheses and applications)

7.	Course Syllabus	**Infrared Spectroscopy:** General principles, factors influencing vibrational frequencies, selection rules, Analysis of Infra-red technique, Fourier- transform IR–Spectroscopies. Introduction to terahertz spectroscopy, Application of IR and terahertz spectroscopy Spectroscopy to inorganic and organic compounds. **Raman Spectroscopy:** Principles, normal, resonance and laser Raman Spectroscopies. Structure determination by symmetry selection rules (normal coordinate analysis). Application of Raman Spectroscopy to structural chemistry. Nuclear magnetic resonance Spectroscopy. **Elctronic spectroscopy:** General principles, Electronic absorption spectra of organic and inorganic molecules, Selection rules and their implications. Instrumentation: analytical applications: qualitative and quantitative analyses. **Luminescence Spectroscopy:** Introduction, characteristics of fluorescence and phosphorescence emission, effects of solvents on fluorescence spectra. Lippert equation, Time scale of excited state molecular processes in solution, Life times and quantum yields. Basic instrumentation, The Biochemical applications of solvent effects: localization of membrane-bound and protein- bound fluorophores, Polarization of emission, Measurements of fluorescence Polarization, Extrinsic causes of fluorescence depolarization. Effect of rotational diffusion on fluorescence anisotropies: the perrin equation. Chemical and biochemical applications of anisotropy measurements. **NMR Spectroscopy:** Nuclear magnetic resonance Spectroscopy: General principles, sensitivity of the method, CW and FT-NMR, instrumentation. Application in chemical analysis (with special reference to 1H – NMR): Chemical shift, spin-spin splitting, area of peak, shift reagents, off-resonance decoupling, Nuclear Overhauser Effect, solid state and gas phase NMR spectra. **Mass Spectrometry:** Mass spectrometry: Principles, advantages and limitations of Mass Spectrometry. Instrumentation, Methods of ionization, Metastable ions. Theory of Mass Spectrometry. Structure elucidation of inorganic and organic compounds. **X-ray-diffraction and X-ray photoelectron spectroscopy:** Basics Principles and applications. **Electron Paramagetic Resonance:** Basic Principles, Isotropic hyperfine effects, Zeeman energy, anisotropy, hyperfine anisotropy, applications **Mössbauer Spectroscopy:** Fundamentals of Mössbauer spectroscopy and applications.

6.	Scope of the course	
7.	Course Syllabus	**Introduction** to nanoscale and colloidal systems, Fundamentals of surface and interfacial chemistry. Surface tension and wettability. Insoluble monolayers. **Self-assembled monolayers (SAMs):** Growth processes, Phase transitions, Mixed monolayers, applications of SAMs. Electrostatic interactions in self-assembling systems. Self-assembly of amphiphiles. Monolayers, micelles, and microemulaions. **Adsorption phenomena:** Adsorption of surfactants at solid surfaces. Langmuir adsorption and models describing multilayer adsorption. **Immobilization of biomolecules:** strategies and applications in nanobiotechnology. Enzyme responsive surface. **Nanofabrication methods:** Bottom-up methods, photolithography, scanning probe methods, soft lithography, e-beam lithography. **Chemical functionalization:** Recent advances in thiol-Au and silane chemistry. Layer-by- layer synthesis of multilayer assemblies. Applications. **Spectroscopic and Imaging techniques:** AFM, STM, SEM, Confocal microscopy, Surface enhanced Raman spectroscopy (SERS), Imaging ellipsometry, X-ray based techniques. **Heterogeneous Catalysis:** Historical Background, Catalysis, difference between homogeneous and heterogenous catalysis, reactive interfaces, effect of structures on reactivity, catalytic materials and their preparation, activity and selectivity, measurement of catalytic properties, applications in raw materials and their conversions, environmental protection and daily life, future of catalysis.
8.	Suggested Books	1. The Colloidal Domain: Where Physics, Chemistry, Biology and Technology Meet by D. Fennell Evans and Håkan Wennerström; 1999 John-Wiley and Sons, Inc. 2. 7.	Course Syllabus	**Chemistry at the Nano-dimension:** Introduction: definition of a nano system, top-down and bottom up approach, dimensionality and size dependent phenomena, properties of Individual nanoparticles: Metal nanoparticles, semi-conducting nanoparticles, metal oxide nanoparticles, composite nanostructures, optical properties. Synthesis of Nanomaterials: Solution chemical methods, Gas or vapor based methods of synthesis: CVD, MOCVD and MBE, Sol-gel processing, Bioconjugation, Toxicity and green chemistry approaches of synthesis. Carbon nanotubes: synthesis, properties and surface functionalization, zeolites and graphenes. Magnetic nanoparticles: Synthetic methods and properties, Diamagnetism, paramagnetism and superparamagnetism, proton relaxation, surface modification. Applications in magnetic seperation, development of MRI contrast agents. Characterization of Nanomaterials: Electron microscopes-Scanning Electron Microscope, Transmission Electron Microscopes, Scanning Tunneling Microscopy, Atomic Force Microscopy, nano-tweezers, Dynamic Light scattering, Surface enhanced Resonance Raman spectroscopy, ICP-mass. Applications of Nanomaterials: Chemical and biomedical detection, imaging and therapy, Energy conversion: PV solar cells and Photo electro-chemical cells, Lasers, LEDs, photonic crystals. **Metal Organic Frameworks:** Development of metal organic materials, guest removal and uptake, flexibility, topology and interpenetration, highly connected metal-organic framework, organometallic network, acentric and chiral network, application of metal-organic framework in nonlinear optics, selective absorption of gas and vapour, hydrogen, methane, carbon dioxide storage, magnetic materials. **Organic Electronics:** OLED, WOLED, Liquid crystalline materials. NLO materials (2nd and 3 rd order NLO materials), 2Photon and multiphoton process. Organic solar cell, OFET (n-channel and P-channel) materials.

5	Prerequisite if any	Undergraduate courses in inorganic chemistry
6	Learning Objectives	Main objective of this course is to give an overall unified understanding of bioinorganic chemistry by identifying the principles that have emerged in last few decades by arranging them in a logical and consistent order. This course will introduce the students the ever expanding frontier of bioinorganic chemistry by discussing some exemplary individual cases along with the principles that tie the realms of bioinorganic chemistry together.
7	Course Syllabus	Overview of bioinorganic chemistry, thermodynamic and kinetic aspects of coordination compound in bioinorganic chemistry, reaction of coordinated ligands, model complexes and concept of spontaneous self-assembly. Coordinative properties of biological molecules : proteins, nucleic acids and other metal binding biomolecules Different roles of metal ions in biology : Roles of Zn^{2+}, Mg^{2+}, Na^{+} and K^{+} in terms metalloproteins in hydrolysis exemplified by carboxypeptidase, carbonic anhydrase, α-amylase, ATPase, thermolysin, alkaline phosphatase *etc*. Roles of Fe^{2+} and Cu^{+} as biological oxygen carrier, hemoglobins (human A, erythrocruorin, chlorocruorin), hemocyanins and hemerythrins, synthetic oxygen carrier and model systems. Structural role of Zn^{2+} in DNA binding metalloprotein as zinc finger and role of Ca^{2+} in metalloregulatory proteins. Metalloenzymes in biological nitrogen cycle : molybedenum-dependent nitrogen fixation Uptake, transport and storage of essential metal ions exemplified by iron – transferrin and ferritin. Manganese catalyzed oxidation of water to oxygen : photosystem I and II. Cobalamins including Vitamin, reactions of the alkylcobalamin. Biological functions of tungsten, vanadium and chromium. Cu^{+} and Fe^{2+} in ATP synthesis – Cytochrome *c* oxidase. Metalloproteins in electron transfer – blue copper proteins and iron sulphur proteins. Role of metals ion in medicinal chemistry and as diagnostic tools, chelation therapy.

Prochirality nomenclature: Pro-R, Pro-S, Re and Si. **Selectivity in synthesis:** Stereo specific reactions (substrate stereoselectivity). Stereo selective reactions (product stereoselectivity): Enantioselectivity and diastereoselectivity. Conditions for stereoselectivity: Symmetry and transition state criteria, kinetic and thermodynamic control. Methods for inducing enantio and diastereoselectivity. **Analytical methods:** % Enantiomer excess, % enantioselectivity , optical purity, % diastereomeric excess and % diastereoselectivity. Techniques for determination of enantioselectivity: Specific rotation, Chiral 1H NMR, Chiral lanthanide shift reagents and Chiral HPLC, Chiral GC. **Part-II: Methodology of asymmetric synthesis:** Classification of asymmetric reactions into 1.substrate controlled, 2. chiral auxiliary controlled, 3. chiral reagent controlled and 4. chiral catalyst controlled. **1. Substrate controlled asymmetric synthesis:** Nucleophilic additions to chiral carbonyl compounds. 1, 2- asymmetric induction, Cram's rule and Felkin-Anh model. **2. Chiral auxiliary controlled asymmetric synthesis:** α-Alkylation of chiral enolates, azaenolates, imines and hydrazones. Chiral sulfoxides. 1, 4-Asymmetric induction and Prelog's rule. Use of chiral auxiliaries in Diels-Alder and Cope reactions. **3. Chiral reagent controlled asymmetric synthesis**: Asymmetric reductions using BINAL-H. Asymmetric hydroboration using IPC2 BH and IPCBH2. Reductions with CBS reagent. **4. Chiral catalyst controlled asymmetric synthesis**: Sharpless, Jacobsen and Shi asymmetric epoxidations. Sharpless asymmetric dihydroxylation and amino hydroxylation. Asymmetric hydrogenations using chiral Wilkinson biphosphine and Noyori catalysts. Chiral catalyst controlled Diels- Alder and Michael reactions, Organocatalytic mediated asymmetric synthesis. **Part-III: Total Synthesis of Biological Active Compounds**

Physics Courses for Elective I -VI (In addition to these courses, a student can also choose from the PhD coursess being offered by the other disciplines.)

Sr. No.	Course code	Course Name	L-T-P-Credits
1.	PH 613	Developments in early 20^{th} century in Physics	2-1-0-3
2.	PH 652	Mathematical Methods, Electrodynamics and Applications	2-1-0-3
3.	PH 671 / IPH 471	Relativity, Cosmology, and the Early Universe	2-1-0-3
4.	PH 674 / IPH 474	Basics of Radio Astronomy	2-1-0-3
5.	PH 721	Advanced Materials	2-1-0-3
6.	PH 722	X-ray Spectroscopy	1-2-0-3
7.	PH 725	Characterization of Surfaces and Interfaces of Materials	2-0-2-3
8.	PH 745	Laser Physics	2-1-0-3
9.	PH 761	Theoretical Particle Physics	2-1-0-3
10.	PH 765	Experimental Techniques in High Energy Physics	2-1-0-3
11.	PH 781	Theory of Complex Systems	2-0-2-3
12.	PH 790	Statistical Methods in Physical Sciences	2-1-0-3

NOTE: 1. A PhD student having **MSc/ BTech/ BE or equivalent qualification** has to do 5 to 7 PhD level courses of at least 3 credits each and 1-2 PhD seminar courses of at least 2 credits each. Minimum number of courses will be 5 PhD level courses and one PhD seminar course *(minimum coursework of 17 credits).*

2. A PhD student having **MTech/ME//MPhil** qualification has to do one semester coursework (with 2-3 PhD level courses) Minimum number of courses will be 2 PhD level courses and one PhD seminar course (i.e. *(minimum coursework of 8 credits)*.

* PhD Seminar course can be taken either in Autumn or in Spring Semester or both as suggested by the Faculty Advisor/Thesis Supervisor.

1.	Course Code	**PH 601**
2.	Title of the Course	**Electrodynamics**
3.	Credit Structure	L-T- P-Credits 3-0-0-3
4.	Name of the Concerned Discipline	Physics
5.	Pre–requisite, if any	Vector calculus and Special Theory of Relativity
6.	Scope of the Course	
7.	Course Syllabus	Brief review of Electromagnetism: Vector Calculus, Greens Function, Coulomb's law, Gauss Law, Laplace's equation, Poisson's equation, electrostatics with conductors, capacitors, dielectrics, Biot-Savart's law, Ampere's law, Lorentz force. Faradays' law, Lenz's law, self and mutual inductance, energy in a magnetic field. Electrodynamics: Maxwell's equations, displacement current, electromagnetic waves, plane wave solutions of Maxwell's equations. Maxwell's equations in conducting media, Poynting's vector, wave propagation through a boundary, reflection, refraction, absorption and skin-depth.General boundary value problems using special functions. Wave-guides, resonant cavities, cylindrical waveguides and optical fibers, potentials and fields, radiating systems, multipole fields and radiation, scattering and diffraction, relativistic electrodynamics, Lorentz transformations, 4-vectors, 4-momentum, mass-energy equivalence, relativistic covariance of Maxwell's equations, radiation from accelerated charges, communication and radar.
8.	Suggested Books	**Text:** 1. J. D. Jackson, **Classical Electrodynamics** (3rd edition), John-Wiley & Sons, 1998. 2. W. Greiner, **Classical Electrodynamics**, Springer International Edition. **References:** 1. D. J. Griffiths, **Introduction to Electrodynamics** (3rd edition), Prentice Hall, 1989. 2. R. P. 1.	Course Code	**PH 610**
2.	Title of the Course	**Quantum Mechanics**
3.	Credit Structure	L-T-P-Credits 3-0-0-3
4.	Name of the Concerned Discipline	Physics
5.	Pre–requisite, if any	An undergraduate course in Quantum Mechanics is preferred, though not necessary.
6.	Scope of the Course	To impart a systematic exposition of basic concepts, techniques and methods in quantum mechanics to the graduate students so that they can confidently apply them in various fields of study and research.
7.	Course Syllabus	**Fundamental Concepts** : The Stern-Gerlach experiment, Kets bras and operators, Base kets and matrix representations, Measurements, observables and the uncertainty relations, change of basis, position , momentum and translation, wave functions in position and momentum space **Quantum dynamics** : Time evolution and the Schrodinger equation, The Schrodinger versus the Heisenberg picture, Simple harmonic oscillator, Schrodinger's wave equation **Theory of angular momentum** : Rotation and angular momentum commutation relations, spin ½ systems and finite rotations, SO(3), SU(2) and Euler rotations, Density operators and pure vs mixed ensembles, Eigenvalues and eigenstates of angular momentum, Orbital angular momentum, addition of angular momenta, Tensor operators **Approximation methods** : Time independent perturbation theory (Non degenerate case), Time-independent perturbation theory (The dependent case), hydrogen like atoms (Fine structure and Zeeman effect), Variational methods, Time dependent potentials (The interaction picture), Time dependent perturbation theory, Energy shift and decay width **Scattering theory**: The Lippman-Schwinger equation, Optical theorem. Born approximation, Free particle states (Plane waves vs spherical waves), method of partial waves.
8.	Textbook	1. J.J. Sakurai , Modern quantum mechanics . 2. "Quantum mechanics" by E. Merzbacher, 3rd edition. 3. "Quantum mechanics" by A. Messiah. 4. "Quantum mechanics", Course of theoretical physics, Vol. 3, 3rd edition by L. Landau and L. Liftshitz. 5. "A Modern Approach to Quantum Mechanics" by J. Townsend. 6. "Quantum Mechanics" (Feynman lectures of physics vol. 3) by R. Feynman. 7. "Quantum mechanics" by Schiff. 8. "Lectures on Quantum Mechanics" by G Baym. 9. "Quantum Mechanics" by C. Cohen-Tannoudji, B. Diu, F. Laloë. 10. "Quantum mechanics" by A. S. Davydov. 11. "Principles of Quantum Mechanics" by R. Shankar

1.	Course Code	**PH 611**
2.	Title of the Course	**Fundamental of Quantum Mechanics**
3.	Credit Structure	L-T- P-Credits 3-1-0-4
4.	Name of the Concerned Discipline	Physics
5.	Pre–requisite, if any	An undergraduate course in Quantum Mechanics/ Modern physics is helpful, but not necessary.
6.	Scope of the Course	To build up fundamental concepts in quantum mechanics as a precursor to study its applications in various branches of physics.
7.	Course Syllabus	**Fundamental Concepts**: Wave particle duality, The Stern-Gerlach experiment, Kets, bras and operators, Base kets and matrix representations, Measurements, observables and the uncertainty relations, change of basis, position , momentum and translation, wave functions in position and momentum space **Quantum dynamics**: Time evolution and the Schrodinger equation, The Schrodinger versus the Heisenberg picture, Simple harmonic oscillator, Schrodinger's wave equation ,WKB approximation, Tunneling through a barrier **Theory of angular momentum**: Rotation and angular momentum commutation relations, spin ½ systems and finite rotations, SO(3), SU(2) and Euler rotations, Eigenvalues and eigenstates of angular momentum, Orbital angular momentum, addition of angular momenta, Wigner-Eckart theorem, Tensor operators. **Approximation methods:** Time independent perturbation theory (Non degenerate case), Time-independent perturbation theory (The dependent case), hydrogen like atoms (Fine structure and Zeeman effect), Variational methods, Time dependent potentials (The interaction picture), Fermi's Golden Rule; Selection rules; Time dependent perturbation theory, Energy shift and decay width **Identical particles**: Pauli's exclusion principle, spin-statistics connection; **Scattering theory:** The Lippman-Schwinger equation, Optical theorem. Born approximation, Free particle states (Plane vs spherical waves) **Relativistic Quantum Mechanics:** Klein-Gordon equation, Feynman-Struckelberg interpretation of negative energy states and concept of antiparticles; Dirac equation; Plane wave solution and momentum space spinors; Spin and magnetic moment of the electron; Non-relativistic reduction; Helicity and chirality; Properties of matrices; Charge conjugation; Normalisation and completeness of spinors.
8.	Suggested books	**Text Book:** 1. J. J. Sakurai, **Modern Quantum Mechanics** (2^{nd} edition), Addison Wesley, ISBN:978-0805382914. **Reference books:** 1. E. 2.	Title of the Course	**Solid state physics**
3.	Credit Structure	3-0-0-3
4.	Name of the Concerned Discipline/Discipline	Physics
5.	Pre–requisite, if any	None
6.	Scope of the Course	To expose graduate students to a broad range of theoretical concepts, ideas and approaches applied in solid state physics and condensed matter, emphasizing those based on quantum mechanics and collective phenomena. In addition, this course gives exposure to students to major current fields of research in this subject.
6.	Course Syllabus	Sommerfield theory, Crystal structure and symmetry, Reciprocal lattice, Bloch Theorem, electrons in weak periodic potential, Band structure, tight binding method, semiclassical method of electron dynamics, de Haas-van Alphen effect and other Fermi surface probes, Hartree-Fock equations, Screening, Thomas-Fermi theory, Fermi Liquid theory, classical and quantum theory of harmonic crystals, phonons, electron-phonon interactions, diamagnetism and paramagnetism, magnetic structure, ordering and properties, superconductivity and superfluids.
7	Textbook	"Solid State physics" by Ashcroft and Mermin
8.	Suggested References	1. "Introduction ot solid state physics" by Charles Kittel 2. "Condensed matter physics" by Micheal P. Marder 3. "Solid State Physics" by Grosso and Parravicini 4. "Advanced solid state physics" by Philips and Philips 5. "Theory of solids" by Ziman 6. "Introduction to superconductivity" by Tinkham 7. "Quantum phase transitions" by Subir Sachdev 8. "Condensed matter field theory" by Atlands and Simons 9. "Quantum field theory of many particle systems" by Fetter and Walecka

4.	Name of the Concerned Discipline	Physics
5.	Pre–requisite, if any	Solid state Physics, Electrodynamics
6.	Scope of the Course	
7.	Course Syllabus	**Review of Semiconductor Device Physics:** Effect of Doping on Fermi level and Concept of Junctions; Junction Characteristics and its application as a diode, transistor and field effect transistors. Application of diodes and transistors in Rectifier circuits, Filters circuits and Regulated power supplies. AC and DC transformers. Oscillators. **Optoelectronic Devices:** Introduction to interaction of radiation with matter, Solar Cells, Photo-detectors (scintillation detector), High purity Germanium Detector, GM Counter, Single Channel and Multichannel analyzer. **Digital Electronic:** Review of digital electronics including number system and Logic gates. Digital techniques and applications (registers, counters, comparators and similar circuits); A/D and D/A converters; operational amplifiers and their applications; microprocessor and microcontroller basics. **Introductory Signal Analysis:** Introduction to Signal Analysis and its applications. **Introduction to Electronic Instrumentation and Measurement techniques**: Transducers and their applications, sensors and physical principles of various types of sensors. AC, DC, and Stepper motors

1.	Course Code	**PH 660**
2.	Title of the Course	**Nuclear and Particle Physics**
3.	Credit Structure	L-T- P-Credits 3-0-0-3
4.	Name of the Concerned Discipline	Physics
5.	Pre–requisite, if any	An undergraduate course in Quantum mechanics/Modern Physics.
6.	Scope of the Course	To introduce students with the concepts and important developments in last century in our understanding of nucleus and elementary particles and their interactions.
7.	Course Syllabus	Basic nuclear properties: size, shape, charge distribution, spin and parity; Binding energy, semi-empirical mass formula; Electric and magnetic moments; Fermi gas model of nucleus; nuclear shell model; Liquid drop model; Rutherford scattering; Fission and fusion; Atomic Reactors, Nature of the nuclear force, form of nucleon-nucleon potential; Charge-independence and charge-symmetry of nuclear forces; Isospin; Deuteron problem; Evidence of shell structure, single- particle shell model, its validity and limitations; Rotational spectra; Elementary ideas of alpha, beta and gamma decays and their selection rules; Electromagnetic transitions in nuclei multipole radiation; Nuclear reactions, reaction mechanisms, compound nuclei and direct reactions; Classification of fundamental forces; Elementary particles (quarks, baryons, mesons, leptons); quark model; Bag model; Symmetries and Conservation laws; Spin and parity assignments, isospin, strangeness; Gell-Mann-Nishijima formula; C, P, and T invariance and applications of symmetry arguments to particle reactions, parity non-conservation in weak interaction; Relativistic kinematics. Particle Accelerators and Detectors; Experimental prospective of detection of elementary particles. Introduction to QCD and Quark-Gluon Plasma (Qualitative).
8.	Suggested books	1. W. E. Burcham and M. Jobes, **Nuclear and Particle Physics**, Addison Wesley Longman Ltd., Harlow, 1995. 2. B. R. Martin and G. 1.	Course Code	**PH 671/ IPH 471**
2.	Title of the Course	**Relativity, Cosmology, and the Early Universe**
3.	Credit Structure	L-T- P-Credits 2-1-0-3
4.	Name of the Discipline	Physics
5.	Pre–requisite, if any	Special Relativity, Basic Electrodynamics
6.	Scope of the Course	This course aims to introduce students to cosmology through an understanding of the General Theory of Relativity. Special emphasis will be placed on linear perturbation theory in the early universe, leading to the formation of the cosmic microwave background, as this illustrates basic undergraduate physics in the context of the frontiers of research in cosmology.
7.	Course Syllabus	1. **Introduction to General Relativity:** Einstein Equations (through Action), Newtonian approximation, Schwarzschild metric, Classic test(s) of General Relativity Schwarzchild Black Hole (Event Horizon), Raychaudhuri Equation. 2. Theory of Special Relativity 3. Friedmann equations, density parameters and cosmological models, Redshift, Particle and event horizon, Cosmic distance ladder. 4. **Cosmic Microwave Background:** Boltzmann equation, Acoustic Oscillations, Neutrino Temperature, Inhomogeneity to anisotropy, Power Spectrum, Primordial Nucleosynthesis, Structure Formation, Inflation 5. **Current Research Topics in Cosmology:** Dark Matter, Galaxy Clusters, Dark Energy, Secondary Effects in the Cosmic Microwave Background, Sakharov Condition, Inflationary theory.
8.	Suggested Books	**Text Books** 1. S. Dodelson, **Modern Cosmology**, Academic Press, 2003, ISBN: 0-1221-9141-2. 2. S. 1.	Course Code	**PH 674 / IPH 474**
2.	Title of the Course	**Basics of Radio Astronomy**
3.	Credit Structure	L-T- P-Credits 2-1-0-3
4.	Name of the Discipline	Physics
5.	Pre–requisite, if any	Basics of Electronics procedure of conducting experiments
6.	Scope of the Course	This course is intended to impart the hands-on Astronomy to students. It aims to introduce Radio Astronomy as well as basic instrumentation and Engineering in Astronomy. It also aims to introduce students to the basics of Extragalactic Astronomy and Cosmology.
7.	Course Syllabus	**Review of Electromagnetic theory:** Maxwell's equations and basics of electric and magnetic fields, Basic Electromagnetic Theory and radiation of electromagnetic waves, E & B Field Measurable quantities and Polarization. **Radio Universe and Antenna:** The Radio Universe and the Atmospheric Radio Window Brightness, Flux density and antenna fundamentals-I, Effects of the earth's atmosphere, Basics of Radiative Transfer, Antenna fundamentals–II, Antenna Fundamentals–III. **Radio Interferometry:** Introduction, Uses and Advantages, Essential Ingredients of an interferometer. **Radiometers:** from Voltages to Spectra, Galactic Astrophysics and observations. **Extragalactic Astrophysics:** Fundamentals, Galaxies, Clusters of Galaxies, A brief introduction to cosmology, Astrophysics with 21 cm emission. **Experiments:** 1. Measuring Beam Patterns – 4 sessions 2. Measuring telescope aperture efficiency – 2 sessions 3. Measuring the brightness of the sun and the moon – 2 sessions 4. Galactic Observations – 21 cm – 4 sessions 5. Extragalactic Observations – 21 cm – 6 sessions 6. Cosmological Comtinuum and spectral line observations – 4 sessions 7. Final Projects – 8-10 sessions
8.	Suggested Books	1. B. Ryden, **Introduction to Cosmology**, Addison Wesley, 2003, ISBN: 0-8053-8912-1

1.	Course Code	**PH 691**
2.	Title of the Course	**Physics Laboratory-I**
3.	Credit Structure	L-T- P-Credits 0-0-8-4
4.	Name of the Discipline	Physics
5.	Pre–requisite, if any	Basics of Safety Procedures and Conduct in Laboratories
6.	Scope of the Course	This course aims to introduce basic laboratory techniques in Physics through experiments that will be conducted as Experimental Projects. Students will be expected to attend laboratory sessions having familiarized themselves with basic theory of the experiments. Every experiment would be carried out in the form of a project, and students will be expected to submit a report for every experiment.
7.	Course Syllabus	**1. Thermal diffusivity** : teaches student how to do Fourier analysis of a periodic function of time. Theory involves the diffusion equation which gives thermal waves decaying in amplitude and changing in phase as they propagate. **2. Dielectric constant of benzene and dipole moment of acetone**: explains the difference between polar and non- polar molecules, the concept of the local electric field different from the applied field, and the application of the Clausius-Mosotti relation. **3. Verification of Curie-Weiss law for a ferroelectric using a ce- ramic capacitor**: The ceramic capacitor contains a ferroelectric material as a dielectric with a Curie temperature around 20 ^{o}C. This provides a cheap and convenient method of verifying Curie-Weiss law. **4. Thermal relaxation of a serial light bulb**: This experiment verifies the Debye's relaxation formula which is of importance in many areas. **5. B-H curve using an integrator**: Uses a hard material so that measurement of the remanent induction, coercive field and energy loss in a cycle is easy. It also uses an integrator and indicates how by integrating Farady's law one may get the flux change. **6. Calibration of a Lock in Amplifier and measurement of mutual inductance of a coil and low resistance (below 1 Ohm)**: The Lock in amplifier illustrates phase sensitive detection. One can ver- ify all laws of mutual inductance and measure MI of about 100 μhenry to an accuracy of 2 to 3% using a current less than 1 milliampere. **7. Geiger-Muller Counter:** i) Statistical nuclear counting ii) Verification of Gaussian and Poissionian Distribution. **8. Feigenbaum and Chua circuits for non-linear dynamics**: This indicates how one goes from order to chaos in a deterministic non-linear system through a process of bifurcations. The Chua circuit illustrates how a non-linear negative resistive device can be built using op-amps and illustrates bifurcation in frequencies and shows different types of attractors. **9. Tracing FM to PM transition in Ni and crystal structure transition in Shape memory alloy through resistivity measurement**: The experiments on phase transitions illustrate how resistivity can be used to trace phase transitions. **10. Percolation**: To measure the percolation threshold for conductivity and show how conductivity varies near the threshold. **11. Michelson's interferometry:** Laser diffraction (single, double and multiple slits, diffraction grating) **12. Fiber optics experiment:** numerical aperture of optical fiber, study of single and multi mode optical fibers. Calibration of an unknown source using Gama-ray spectrometer.

Courses from Discipline of Mathematics for the PG students in Mathematics [@]:

MA 714: Advanced Complex Analysis

MA 734: Fourier Analysis on Euclidean Spaces

MA 736: Wavelet Analysis

MA 742: Commutative Algebra

MA 780: Mathematical Logic

MA 782: Theory of Computations

@ In addition to this course list, a student can also opt from the PG courses being offered by the other disciplines. An MSc student can also choose elective courses from PhD course curriculum of Mathematics except the courses MA 741: Algebra, MA 711: Analysis, MA 720: Differential Equations, MA 703: Topics in Analysis.

NOTE:

1. During the second semester, students will choose their research project guide(s) and continue their research project work in the third and fourth semesters.

2. Students will submit a dissertation after the completion of their research project work as per the time schedule mentioned in the PG course curriculum.

3. The conversion from MSc to PhD program is to be considered after evaluating the research potential of the promising and motivating PG students at the end of the **third semester of their program.**

4. If the student opts for Dual Degree Programme but cannot complete the requirements of a PhD, an **exit option** with the MSc degree can be earned at the end of the final semester of the normal MSc Programme by getting the MSc Research Project examined in the standard manner as per the requirements for the award of an MSc degree.

5. The scholarship will be from the beginning of the fifth semester or from the date on which all requirements for the award of MSc degree are fulfilled, whichever is later**.**

6.	Objectives of the course	At the end of the course, students should be exposed to fundamental knowledge and problem solving skills in interpolation theory, Numerical integration, numerical solution of system of linear equations, Numerical solution of ordinary differential equations, and finite difference methods.
7.	Course Syllabus	Introduction, finite floating point arithmetic, catastrophic cancellation, chopping and rounding errors. Interpolation by polynomials, divided differences, error of the interpolating polynomial, piecewise linear and cubic spline interpolation. Numerical integration, composite rules, error formulae. Solution of a system of linear equations. Solution of a nonlinear equation, bisection and secant methods. Newton's method, rate of convergence, solution of a system of nonlinear equations. Numerical solution of ordinary differential equations, Euler and Runge-Kutta methods, multi-step methods, predictor-corrector methods, order of convergence, global errors, algebraic and shooting methods for boundary value problems. Finite difference methods, numerical solutions of elliptic, parabolic and hyperbolic partial differential equations. Eigen-value problem, power method, QR method, Gershgorin's theorem. Exposure to software packages like MATLAB.

3.	Credit Structure	L-T- P-Credits 2-0-2-3
4.	Name of the Concerned Disciplines	Mathematics and Mechanical Engineering
5.	Pre–requisite, if any	None
6.	Scope of the Course	The primary goal is to develop ability as well as awareness of reasoning and decision-making utilizing statistical data. The quality of decision making is decided by the way data and information is handled/interpreted by a researcher.
7.	Course Syllabus	**Introduction to statistics**: definitions and terminology; data classification; data collection techniques, various scales for measurement and their relevance **Descriptive statistics:** frequency distributions; measures of central tendency, Variation **Probability:** basic concepts; multiplication and addition rules, Bayes rule, Discrete probability distributions: basic concepts; Binomial, Poisson, and other discrete distributions, Continuous probability distributions: Exponential, Normal, Weibull, and other continuous distribution. **Normal probability distributions**: introductory concepts; the standard normal Distribution; central limit theorem, applications of normal distributions, approximations to discrete probability distributions **Correlation and Regression analysis:** overview of correlation; linear regression, **Hypothesis Testing:** Null and Alternative Hypothesis, Type I and Type II errors, Confidence intervals: confidence intervals for the mean (large samples and small samples) and for population proportions, p-value, z-test, t-test, F-test, etc. Analysis of Variance **Taguchi Method and Design of Experiments, Non-parametric tests, Case studies and applications to managerial decision making**

6.	Scope of the course	Problems in Numerical Linear Algebra arise in a wide variety of scientific and engineering applications including the control theory, the analysis of electrical networks, and the modeling of chemical processes. This course will cover the analysis and implementation of algorithms used to solve linear algebra problems. We will study algorithms for linear systems solution, linear least-square problems, and eigenvalue and singular value problems. Further, we study the sensitivity and stability analysis of the above algorithms to improve efficiency of problems by using various structures of matrices.
6.	Course Syllabus	Floating point error, Round off error, Gram-Schmidt orthonormal process, Modified Gram-Schmidt orthonormal process, **Solution of linear system:** Triangular systems and Inverse of a triangle matrix, Gauss elimination and LU Factorization method, QR factorization, QR Algorithm. Rank deficient least square problems, SVD, Moore Penrose inverse, Linear iterative methods – Convergence results for Jacobi & Gauss - Seidel and relaxation method. Stationary & non stationary iterative methods Convergence analysis of the Richardson method, the gradient method, the Conjugate gradient method. Method based on Krylov subspace Arnoldi method, the GMRES, The Lanczos method. Approximation of Eigen value: Power method, Inverse iteration, Sensitivity analysis of Eigen values and Eigen vectors, canonical forms of matrices, Reduction to Hessenberg and tridiagonal form, conditioning of numerical algorithms. Applications to control, H_∞ control, Distance problems. Analysis of electric network. Finite Difference analysis of ordinary differential equation- Beam bending problem. Finite difference analysis of partial differential equation-Heat equation. Applications to Internet search engine-Google Matrix.

NOTE:

1. A PhD student having **MTech/ME//MPhil** qualification has to do one semester coursework (with 2-3 PhD level courses). Minimum number of courses will be 2 PhD level courses and one PhD seminar course i.e. *(minimum coursework of 8 credits)*.
2. A PhD student having **MSc/ BTech/ BE** or equivalent qualification has to do 5 to 7 PhD level courses of at least 3 credits each and 1-2 PhD seminar courses of at least 2 credits each. Minimum number of courses will be 5 PhD level courses and one PhD seminar course *(minimum coursework of 17 credits).*

* PhD Seminar course can be taken either in Autumn or in Spring Semester or both as suggested by the Faculty Advisor/Thesis Supervisor.

Courses for the Electives-I to VI (In addition to this course list, a student can also opt from the PG courses being offered by other disciplines.)

5.	Pre–requisite, if any	None
6.	Scope of the Course	This course will give a comprehensive introduction to the fundamental and major aspects of biomedical imaging systems used currently. The fundamental physics and engineering of each imaging modality will be discussed.
7.	Course Syllabus	Radiation and interaction with matter, principle of diagnostic biomedical optical imaging. Radiation dosimetry, risk and protection. Radiography, mammography and fluoroscopy. Principle of ultrasound imaging and current status. Image analysis, image processing, image reconstruction theory, computed tomography system. Magnetic Resonance Imaging (MRI): principle of nuclear magnetic resonance, MR imaging, functional MR imaging, application of MR imaging. Single Photon Emission Computed Tomography (SPECT) principle, Positron Emission Tomography (PET).

6.	Scope of the Course	This course is designed to teach the basics of Physics, sufficient for BSBE graduate students. The fundamental physics of Biological phenomena will be discussed. It will also prepare students to learn and apply biophysical approaches to understand biochemical, biotechnological and medical problems.
7.	Course Syllabus	Origin and evaluation of life. Discussion about various stages of evolution. Single cell machinery to multi-cellular organs. Structure of biomolecules. Elements of building blocks for macromolecules. Weaker interatomic interactions. Hydrogen bond and hydrophobic interactions. Amphiphilic molecular behavior in aqueous environments. Structures and physics of amino acids and proteins. Conformational transitions of proteins (folding and unfolding of proteins), Ramachandran plot. Physics of nucleic acid, membranes and membrane physics. Dynamics of biomolecules: diffusion, vibrations versus conformational transitions. Interaction of biomolecules with electromagnetic radiation. General characteristic of a cell. Cytoskeletal organizations and constituents molecules and their mechanism. Ion channels and ion pumps, osmotic pressure of cells. Cellular energetics: chloroplast and mitochondria. Cells as thermodynamic machines. Active transport. Bioelectricity, heart dynamics, anatomy of nerve cells, conducting properties of neurons. Structure and function of synapse.

5.	Pre–requisite, if any	Basic Biology and Basic Biochemistry (Undergraduate level).
6.	Scope of the Course	The course is designed to provide graduate students a broad background view on virus history, classification, structure, life cycle, virus-host interactions. The course is designed primarily in the context of animal virology. There will be emphasis on viral reverse genetics in designing successful vaccines. The course further aims provide a brief career road map to the students to become a successful virologist.
7.	Course Syllabus	Virus history: Discovery of viruses, Major viral epidemics in human history (Eg. Influenza, HIV, Polio, SARS, Ebola), Milestones in virology research, Emerging infectious viral diseases. Virus classifications. Nano life: A quick view on virus structure and classification: General characteristics of viruses, diversity, shapes, sizes, and components of genomes. Virus life cycle in host cell. Assembly and packaging of virus particles. Strategies how virus packages its genome and exits the living cell. Virus-host interaction: Concepts of co-evolution of viruses and humans. Virus entry, replication. Consequences of virus infection. Mechanisms to invade host defense. Strategies on counter attack. Overview on anti-viral therapy. Reverse Genetics: Reverse genetics in virology: Generation of recombinant virus from cDNA. Focus on negative strand RNA viruses recovery and genome manipulations. Customizing and designing viral vaccine candidates through reverse genetics. Virotherapy: Use of viruses for treatment of diseases. Creating oncolytic virus for cancer treatment. Gene therapy through viral vector mediated gene expression. Viral Immunotherapy: Principles and implications.

Course Structure for MTech / MTech + PhD Dual Degree Program in Materials Science and Engineering

Qualifying Degree: 1. BE/BTech or equivalent degree either in Mechanical/ Electrical/ Electronics/ Chemical/ Metallurgy/ Materials Science/ Automobile Engineering or **M.Sc** in Chemistry/ Physics/Material Science or Applied Electronics/equivalent **AND** 2. GATE/CSIR-JRF qualification in relevant areas.

IIT graduates with 7.0 or more CPI/CGPA are exempted from GATE/ CSIR-JRF qualification.

Eligibility: First class in the qualifying degree i.e. (i) A minimum of 60 % marks for GEN/OBC (55% for SC/ST) category in aggregate or as specified by the University/Institute **OR** (ii) A minimum CPI of 6.0 for GEN/OBC (5.5 for SC/ST) category on the scale of 10; with corresponding proportional requirements when the scales are other than on 10 (for example 4.8 for GEN/OBC category (4.4 for SC/ST) on a scale of 8) **OR** (iii) A first class as specified by the University/Institute.

Selection criteria: GATE Score/ CSIR-JRF or Equivalent Fellowship + Interview.

Category of Admission: (i) TA: Teaching Assistantship (ii) **IS:** Institute Staff on part-time basis; (iii) **SW:** excellent eligible sponsored candidates (without MHRD TA ship) from reputed R & D Organizations and Industry on full-time and part-time basis.

@ In addition to this course list, a student can also opt from the PG courses being offered by other disciplines.

NOTE: 1. Request for conversion from MTech to MTech + PhD dual degree will be considered after evaluating the research potential of the promising and motivating PG students at the end of the **third semester of their program.**

2. If the student moves to the Dual Degree Programme, but cannot complete the requirements of a PhD, an **exit option** with the MTech degree can be earned at the end of the final semester of the normal MTech Programme by getting the MTech Research Project examined in the standard manner as per the requirements for the award of an MTech degree.

3.The enhancement in the scholarship from MTech to PhD will be from the beginning of the fifth semester or from the date on which all requirements for the award of MTech degree are fulfilled, whichever is later.

6.	Scope of the course	The main objective of this course is to provide training in few selected topics in numerical techniques that is relevant for a Master's student in MSE. This course can be used as a tool to translate the language of continuous mathematics into discrete calculations that can be easily handled by present day computers.
7.	Course Syllabus	**Numerical methods and Special functions for data analysis:** Iterative methods and their convergence, Newton methods and modifications of newton methods, rank and row echelon form, secant, Eigenvalues and Eigenvectors, Existence and uniqueness of solutions, Elementary Row Operations, Gaussian Elimination, LU decomposition. Fourier analysis, Fourier transform, Bessel Functions, Fourier-Bessel series expansion, Fourier-Bessel transform, Green's function, Spherical harmonics,Cubic splines and Runga-Kutta methods. **Applied statistics and error analysis:** Introduction to Probability Theory, Sample space & events, axioms of Probability, Joint and Conditional Probabilities, Baye's Theorem, random variables, cumulative distribution function, probability density function, reliability and failure rates, MTBF and lifetime prediction. Normal and Gaussian distribution, normal approximation to a binomial distribution, central limit theorem, t-distribution, and introduction of analysis of variance, method of least squares, existence of outliers, chi square test, correlation and regression. Error analysis, propagation of errors, classification and probabilistic estimation of errors **Introduction to numerical simulations and Physical concepts related to materials science:** Computer Simulations at different time scales, electronic structure of materials using Quantum Mechanics, atomic/molecular structure using molecular dynamics/montecarlo methods, segment structure using mesoscale dynamics and material structures using Finite element methods, Finite Difference and Finite volume methods **S**tructure property relationships at different length scales, Stress-strain relations, Deformation process, Phase transitions, Dimensional effects on nanoscale materials, 1 and 2-D numerical simulations of discrete electronic devices.

1.	Course Code	**MSE 620**
2.	Title of the Course	**Modeling and Management of Corrosion**
3.	Credit Structure	L-T-P-Credits 3-0-0-3
4.	Name of the Concerned Discipline	Materials Science and Engineering
5.	Pre–requisite, if any	None
6.	Scope of the Course	To expose students towards modeling of corrosion
7.	Course Syllabus	Modelling tools, mathematics for mdeliling, finite element approach. Examples of the use of modelling in corrosion life predition. Corrosion modelling to predict the effectiveness of corrosion control measures. Computer simulation to predict current and potential distributions under different conditions and strategies to be trialled to find the most effective solution. Modern numerical methods of fracture mechanics, in particular, crack propagation and assess crack-like defects and learn how to use to predict fatigue life and how to model cracks in built up structure to model and assess multiple site damage. Computer modelling of Electrochemical and many processes and coatings to components and structures to predict their performance to learn how modelling can help improve your corrosion control solutions. Corrosion sensor technology with corrosion structural effects modeling to enable the transition from periodic corrosion inspections to an efficient, focused prognostics and health monitoring (PHM) system. Corrosion modeling in oil & gas applications, especially in cathodic protection design, inhibitors feeding. Design of corrosion in concrete. High temperature corrosion life prediction of components General management approach for better organization. Basis of corrosion management. Tools of corrosion management. Organizational policies and their implementation. Corrosion management begins with design, effective corrosion control methodologies and their implementation. Corrosion monitoring and its importance in corrosion management. Periodic health monitoring and maintenance, Risk based design and identification of vulnerable components. Role of failure analysis and its importance in corrosion management by using its input in better design and control policies.

4.	Name of the Concerned Discipline	Materials Science and Engineering
5.	Pre–requisite, if any	None
6.	Scope of the Course	To expose students towards high temperature corrosion
7.	Course Syllabus	Difference between ambient temperature corrosion and High temperature corrosion, basics of oxidation, thermodynamic criterion, Ellingham diagram, nomographic representation of oxidation potential, oxide layer growth mechanisms and measurement techniques, thermogravimetric techniques, isothermal and cyclic oxidation, concept of activation energy and rate constants, defects in oxides, Wagner hauffe rules, diffusion in oxides, fick's laws, kirkendal diffusion, temperature effect of diffusion, marking studies in oxide layers and oxidation mechanisms using tracer studies. Thin layer oxidation, Cabrera Mott theory, Ely Wilkensin theory and theories based upon ion migration, electron jump and role of oxide structure. Thick layer oxidation, Wagner's Theory. Oxidation of pure metals, Ni, Fe, Co, Ti, Zr, Nb. Multioxide layer theory, oxidation of alloys, internal oxidation, selective oxidation, breakaway oxidation, catastrophic oxidation, oxidation of steels, stainless steels, superalloys. Oxidation in mixed environment, sulphidation, carburization, metal dusting. Hot Corrosion with examples from gas turbines and coal based power plants. Criteria of corrosion protection at high temperatures. Oxide growth stresses, scale spallation. Active element effect. Development of alloys for Gas turbine and aerospace applications, selection of materials for high temperature application.
