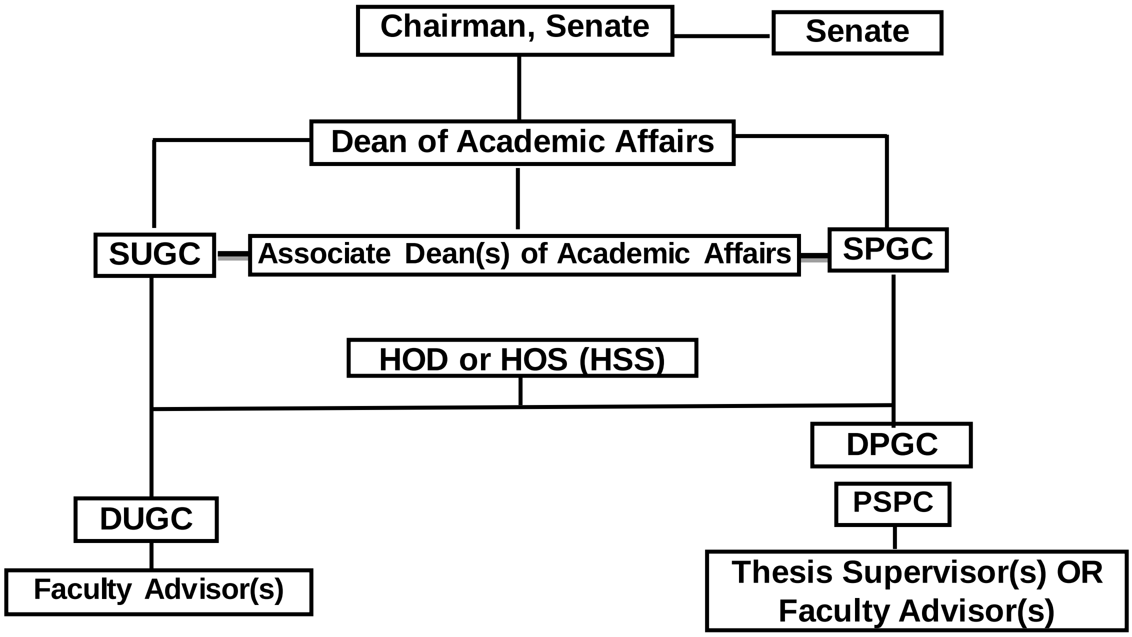
| 11. | Course Structure of M.Tech., M.Tech. + Ph.D. Dual Degree and Ph.D. Program in Metallurgy Engineering and Material Science (MEMS) and Syllabi of Courses | 329 |
| 12. | Course Structure of 2-year M.Sc., M.Sc. + Ph.D. Dual Degree and Ph.D. program in Chemistry and Syllabi of Courses | 395 |
| 13. | Course Structure of 2-year M.Sc., M.Sc. + Ph.D. Dual Degree and Ph.D. program in Physics and Syllabi of Courses | 441 |
| 14. | Course Structure of 2-year M.Sc., M.Sc.+ Ph.D. Dual Degree and Ph.D. Program in Mathematics and Syllabi of Courses | 481 |
| 15. | Course Structure of PG and Ph.D. Program in Biosciences and Biomedical Engineering (BSBE) and Syllabi of the Courses | 534 |
| 16. | Course Structure of 2-year M.Sc. and M.Sc.+ Ph.D. Dual Degree and Ph.D. Program in Astronomy, Astrophysics and Space Engineering and Syllabi of Courses | 601 |
| 17. | Course Structure of PG and Ph.D. Programs in Center for Electric Vehicles and Intelligent Transport Systems (CEVITS) and Syllabi of Courses | 635 |
| 18. | Course Structure of Ph.D. Program in Centre for Advanced Electronics (CAE) and Syllabi of Courses | 646 |
| 19. | Courses and Syllabi by Center of Innovation, Incubation, Entrepreneurship and Industry Relations (CIIEIR) | 650 |
| 20. | Course Structure and syllabus of M.Tech. in Applied Optics and Laser Technology | 653 |
| 21. | Course Structure of PG and Ph.D. Programs in Center of Futuristic Defense and Space Technology (CFDST) and Syllabi of Courses | 656 |
| 22. | Course Structure of PG and Ph.D. Programs in Centre for Rural Development and Technology (CRDT) and Syllabi of Courses | 664 |

## Organization Structure for Academic Matters



**Committees for Academic Matters of the PG Students**

**Department/Discipline Post-Graduate Committee (DPGC):** Each department/ discipline/inter-disciplinary research program has a DPGC to deal with all the academic matters of its PG and Ph.D. students. The committee members and its convener are appointed by the concerned Head. The Thesis supervisor(s) or Faculty advisor(s) of a PG/Ph.D. student report the academic matters related to that PG/Ph.D. student to the concerned DPGC. Its composition and scope of work are described below:

| Composition of DPGC | Scope of Work |
|---|---|
| 1. **Members:** 3-4 faculty members representing all the major specializations of that discipline and PG/Ph.D. Student Representative nominated by the Students Gymkhana (for non-evaluation item only).<br>2. **Convener:** One of the members of DPGC appointed by the concerned Head.<br>3. **Appointing authority:** The concerned Head. | 1. To deal with issues related to **academic Programs, PG and Ph.D. curriculum and courses, academic performance, academic indiscipline, academic malpractices** of individual PG student and send its recommendations to the SPGC.<br>2. Assessment of the **academic Programs** and suggests appropriate **revisions or modifications or improvements** to Academic Senate through SPGC.<br>3. Revising the PG and Ph.D. curriculum.<br>4. Starting of new PG Programs and courses and recommending same to the SPGC.<br>5. Cases of **Early-termination** of the PG and Ph.D. students of the concerned Departments/Disciplines.<br>6. Any other issue related to PG and Ph.D. students. |

**Senate Post-Graduate Committee (SPGC):** This is an Institute level committee for dealing with the academic matters of the PG and Ph.D. students based on the recommendations of the concerned DPGC and submit its recommendations to the Senate. Its composition and scope of work are described below:

| Composition of SPGC | Scope of Work |
|---|---|
| **1. Members:**<br>(A) Conveners DPGC of all the disciplines, HSS and all the centers<br>(B) One PG and one Ph.D. student representative nominated by the Students Gymkhana(for non-evaluation item only).*<br>2. **Convener:** Nominated by the Senate<br>3. **Member Secretary:** DR/AR (Academics) *ex-officio* | 1. To discuss the issues recommended by the DPGCs covering the **academic programs, PG and Ph.D. curriculum and courses, academic indiscipline, academic malpractices** and send its recommendations to the Senate.<br>2. Based on the recommendations of the DPGC, and assessment of the **academic programs,** suggest appropriate **revisions or modifications or improvements** to Senate.<br>3. Discussing the revision of the PG and Ph.D. curriculum based upon the recommendations of the DPGC and recommending same to the Senate.<br>4. Discussion on the starting of new PG programs.<br>5. Discussion on starting of new PG and Ph.D. courses and recommending same to the Senate.<br>6. Cases of **Early-termination** of the PG and Ph.D. students keeping in view the recommendations of the concerned DPGC.<br>7. Any other academic issue related to the PG and Ph.D. students. |

**to be excused from those meetings or part of meeting in which certain academic performance issues of the students are to be discussed*

## Rules and Policies for PG and Ph.D. program

1. **Teaching Assistantship (TA) Work:** ALL the Full-time M.Tech. and Ph.D. students irrespective of their category of admission (i.e. **MHRD/ Institute TA, external agency Fellowship Awardees (FA) / Sponsored (SW)** have to do Teaching Assistantship (TA) duties assigned by the Institute or Competent Authority **to the extent of 8-12 hours of work per week**.

   Under the TA duties, a M.Tech./ Ph.D. student is supposed to assist the concerned faculty member (to be known as TA Supervisor) in the academic work related to conducting of practical classes, tutorial classes, preparing assignments/tutorials and their solutions, invigilation duties, etc. and the other academic work assigned by the concern TA Supervisor or the Competent authority.

   TA **must NOT** be assigned **confidential work** such as setting up question papers of different examinations and quizzes, final evaluation of answer sheets of different exams, and finalizing the grades, etc. Under no circumstances,

   TAs **cannot** be assigned the duties of taking lecture classes of any course.

   Monthly release of M.Tech./ Ph.D. scholarship/Fellowship requires submission of TA work report in the specified format duly signed by the TA Supervisor and Thesis supervisor or Faculty Advisor.

2. **Release of M.Tech., M.S. (Research) and Ph.D. Scholarship/ Fellowship:** Each M.Tech./ M.S. (Research)/ Ph.D. student must be present in the Institute at least during the working hours on all working days unless he/ she has been sanctioned for entitled leave. Each M.Tech./ M.S. (Research)/ Ph.D. student has to sign an attendance register daily during the specified time kept in the office of the concerned Discipline/ School/ institute.

3. The scholarship/ fellowship of the M.Tech./ M.S. (Research)/ Ph.D. students admitted under different category shall be processed for payment on the monthly basis by the respective Head, only after receiving a report from the concern TA supervisor and/ or thesis supervisor/ advisor duly signed by him/ her (as the case may be).

4. **Maximum Duration of Ph.D./ M.Tech./ M.S. (Research) Scholarship for TA category students:**
   a. **Maximum duration of Ph.D. scholarship will be FIVE years from date of joining the Ph.D. program or date of Ph.D. thesis submission, whichever is earlier.** Ph.D. student under Institute Teaching Assistantship category, on satisfactory annual progress for four years of his/ her Ph.D. program be eligible for the Ph.D. scholarship during the fifth year of Ph.D. program, based on his/ her request for extension of scholarship on a half-yearly basis, subject to rigorous evaluation at the end of four years and no case of violating any rules, regulations, academic ethics, and discipline policy of the Institute should be pending against a Ph.D. student. In all other cases, continuation of scholarship during the fifth year of Ph.D. program may be considered from the Research Project Fund/ RDF/ CPDA of concerned Thesis Supervisor.

      In no circumstance will the Institute Teaching Assistantship be extended beyond five years.

In case of unsatisfactory performance, where a fellowship needs to be stopped temporarily or permanantly for any student, the Thesis Supervisor(s), PSPC members and DPGC-Convener have to recommend it to Head of department. Head should communicate the decision to Finance and Accounts Section with a copy to the Academic Office.

b. **Maximum duration of Scholarship for M.Tech.** student is **two years** or **date of viva whichever is earlier.**

c. The maximum duration excludes the time period for which a student does not get the scholarship from the Institute due to receipt of internship/ fellowship/ scholarship/ honorarium paid by external agency.

d. A Ph.D. student can leave the institute to take up an employment or Post-doc fellowship after submitting his/her Ph.D. thesis and the No Dues certificate. In such cases, the Ph.D. scholarship of the student, if he/she is getting it, will be stopped w.e.f. from the date of Ph.D. thesis submission or joining for employment of Post-doc, whichever is earlier.

e. The Ph.D. scholarship of last month will be released after Ph.D. viva and submission of No Dues Certificate by the Student.

f. For any such issues related to Ph.D./ M.Tech./ M.S., the student should move his/ her application through his/ her Thesis Supervisor(s), Convener of DPGC and the Head of his/ her discipline/ school.

g. Scholarship options for Female students during Maternity Leave (ML):

**Option 1:** No scholarship during ML and full scholarship beyond the maximum scholarship time period* for the duration of ML @ scholarship applicable during ML.
**Option 2:** 25% of the applicable scholarship rate during ML and 75% of the scholarship for the duration beyond the maximum scholarship time period* for the duration of ML @ scholarship applicable during ML.
**Option 3:** Full scholarship during ML and no scholarship beyond the maximum scholarship time period* (only for those female students who are only earning member for their dependents. Income proof of husband/ dependents must be enclosed with the application form).

In case a female student completes her Ph.D./ M.Tech./ M.S.(Research) program within the applicable maximum scholarship duration* even after availing ML then the scholarship not paid because of choosing option 1 and option 2 can be released after submission of her Ph.D./ M.Tech./ M.S.(Research) thesis.

* 5 years for Ph.D. and 2 years for M.Tech./ M.S.(Research) program from the date of joining the respective program or date of thesis submission whichever earlier.

5. **Ph.D. Course Credit Requirements:** The minimum and maximum number of courses and credits for the different categories will be as follows.

In addition to the course requirements mentioned below, each Ph.D. student has to do a **compulsory** course **HS 641: English Communication Skills** having contact hours (L-T-P) of

2-0-2 to improve his/her English language communication skill **within its FIRST YEAR of joining the Ph.D. program**. This course will have grades as **Pass (PP) or No Pass (NP)** i.e. it will not affect the CPI of the student.

**Category I:** Ph.D. students with **M.Tech./ M.E./ M.Phil. Or equivalent qualification** shall do 2-3 Ph.D. level courses of at least 3 credits each and 1 Ph.D. seminar course of at least 2 credits.

Minimum number of courses will be 2 Ph.D. level courses and one Ph.D. seminar course (i.e. *(minimum coursework of 8 credits)*.

**Category II:** Ph.D. students having **M.Sc./ M.A./ M.Com./ M.B.A./ B.Tech./ B.E. or equivalent qualification** admitted to a **Science or HSS discipline** shall do 5-7 courses of at least 3 credits each and 1-2 Ph.D. seminar courses of at least 2 credits each.

Minimum number of courses will be 5 Ph.D. level courses and one Ph.D. seminar course *(minimum coursework of 17 credits).*

**Category III:** Ph.D. students having **B.Tech./ B.E./ M.Sc. or equivalent qualification** admitted to Ph.D. Program in an **Engineering discipline** shall do 6-8 courses of at least 3 credits each and 1-2 Ph.D. Seminar courses of at least 2 credits each.

Minimum number of courses will be 6 Ph.D. level courses and one Ph.D. seminar course *(minimum coursework of 20 credits).*

6. **Duration of Ph.D. Coursework:** All the Ph.D. students are required to do course work, which shall normally be completed:
   a. Within **one semester** from the date of joining by the students having **M.Tech./ M.E./ M.Phil. or equivalent qualification**.
   b. Within the **first two semesters** from the date of joining by the students having **B.Tech./ B.E./ M.Sc./ M.A./ M.Com./ M.B.A. or equivalent qualification.**
   c. All the Ph.D. students MUST complete their course under normal circumstances **within ONE year** of joining the Ph.D. program.
   d. For any variation other than the requirements mentioned in (a)-(c), **permission from the Senate Post Graduate Committee (SPGC)** will be required which will consider the recommendations of the Discipline Post Graduate Committee (DPGC) while deciding on the matter.

7. **Minimum CPI requirement:** Each Ph.D. student must maintain a **minimum CPI of 6.0 at the end of each semester** for continuation in the program. Below this CPI, the Ph.D. student will be placed on **Academic Probation** (AP) which is **one time exercise** during the entire duration of the Program with maximum deduction of Scholarship up to 50%. **During Academic Probation**, the Ph.D. student must secure a CPI of 6.0 for continuation in the Ph.D. Program otherwise the student will be discontinued from the program.

An M.Sc./ M.Tech. student can graduate if he/she earns credits in all the prescribed courses of study (i.e. with CPI 4.0) but, an M.Tech. student should maintain a minimum CPI of 6.0 for continuation of Scholarship under TA category of admission. The faculty members of the concerned discipline/school should ensure that generally a PG student does not graduate with minimum CPI of 4.0.

Senate in its **$14^{th}$ meeting held on 20 February 2018** has decided that any **M.Sc. student** who secures CPI less than 3.0 at the end of any semester will be discontinued from his/ her M.Sc. program with an exception that Senate Chairman may consider the appeal of such student to continue in M.Sc. based upon genuineness of the appeal.

Senate in its **$14^{th}$ meeting held on 20 February 2018** has decided that any **M.Tech. and M.S. (Research)** student who fails to secure minimum CPI of 5.0 and 6.0 respectively at the end of any semester will be discontinued from M.Tech. and M.S. (Research) program with an exception that Senate Chairman may consider the appeal of such student under exceptional circumstances to continue in M.Tech. or M.S. (Research) program based upon genuineness of the appeal. ***Any M.Tech. student securing CPI in range of 5.0 to 6.0 to be placed on Academic Probation with 25% deduction in the M.Tech. scholarship. Full scholarship will be resumed once M.Tech. student secures CPI 6.0 or more.***

8. **Policy for Auditing a Course:**

a. If a student **formally registers** to audit a course through proper course registration and wants Audit grade (AU) to be printed on his/her gradesheets for that course, then the concerned student

(i) Must meet the class attendance criteria of that course as announced by the course coordinator **AND**

(ii) Must appear in all the components of the evaluation and secure a pass grade (i.e. non-FR) grade at the end of the semester. Otherwise audit of a course will be considered an **informal arrangement** between the concerned student and the concerned Course Coordinator for attending the course classes for the sake of enhancement of knowledge/information/skills and in such cases no grade will be shown in the grade sheet for such audited course. No re-exam will be conducted for audit courses.

b. The number of **formal or informal audit registered student** cannot be used to satisfy **the minimum student criteria to run a course**.

9. **Confirmation of Registration for Ph.D. Degree:** Ph.D. students shall be granted **Confirmation of Registration for the Ph.D. degree** from the first working day of the semester following the one in which they have successfully completed the required course work.

10. **Selection of Thesis Supervisor:** A M.Sc. and M.Tech. student has to formally select his/ her thesis supervisor(s) after completing the **required course-work**.

A Ph.D. student has to formally select his/her Thesis Supervisor(s) either within **ONE semester** of joining the Ph.D. Program or after completing the **required course-work.**

One thesis supervisor will be from the discipline and other supervisor(s) can be taken from within/outside the Discipline/Institute. **Maximum number of thesis supervisors** should NOT be more than **three** under normal circumstances.

Until a M.Sc., M.Tech. or Ph.D. student finally and formally selects his/ her thesis supervisor, the concerned ***Head*** will be the **Faculty Advisor** to the student. The faculty advisor will provide guidance and advice concerning academic, professional, and personal growth of the assigned students. The guidance to the students will enable them to complete their course of study in a smooth and satisfactory manner.

11. **Constitution of PG Student's Progress Committee (PSPC):** Progress of thesis work of each M.Sc., M.Tech. and Ph.D. student will be monitored through a committee called **PG Student's Progress Committee (PSPC)**.

    **Composition of PSPC:** The PSPC will consist of the thesis supervisor(s), one faculty within the discipline and other faculty/expert within/outside the discipline. One of the thesis supervisors will be the Convener of the PSPC. Visiting Faculty Members and Fellowship Holders can only be Co-Supervisor.

    The process of constituting the PSPC can be initiated by a PG/Ph.D. student once the Thesis Supervisor(s) is (are) finalized. The respective DPGC convener recommends the PSPC to HOD and subsequent recommendations are reviewed and approved by the SPGC convener and notified by the Academic Office.

    At a time, no Thesis Supervisor should guide more than 3 TA category Ph.D. students. The Thesis Supervisor of the Ph.D. student who has completed FIVE years and he/ she is yet to submit the Ph.D. Thesis, will not be allowed to take new Ph.D. students.

    **Procedure for Change of Thesis Supervisor(s):** For Change of thesis supervisor(s), the concerned student should write an application addressed to DOAA which should be routed through proper channel. The application should have written consent of the existing Thesis Supervisor(s) and new Thesis Supervisor(s) with the recommendation of DPGC Convener and Head of the concerned discipline/school/center, ADOAA(PG & PhD) for approval by DOAA.

    The form should be accompanied with PSPC constitution form and if required new PSPC members may also be suggested.

    In case, a new co-supervisor is not from IIT Indore then the duly filled “Form for selecting a co-supervisor from an external or sponsoring organization” on the letter head of his/her parent Organization/Institute/University must also be attached along with the application.

    Request for change of PSPC of any PhD student will not be considered once the student enters into the 4th year of his/her PhD program.

12. **Finalization of the PG/ Ph.D. thesis Topic:** Once the thesis topic of a M.Sc., M.Tech. and Ph.D. student is decided then it should be brought to DPGC for formal approval and institute-wide circulation to avoid the duplication of the thesis work.

13. **Monitoring the Progress of the PG/ Ph.D. Student:** The PSPC will monitor the progress of the thesis work of the M.Sc., M.Tech. and Ph.D. student through a **Comprehensive Evaluation of Research Progress (CERP).**

    For the Ph.D. student, the **first CERP** is to be conducted within one year of joining the Ph.D. Program.

    Based on the CERP, the PSPC will evaluate the progress of the work of the Ph.D. student in terms of satisfactory or unsatisfactory. The progress report duly recommended by the PSPC members must be submitted online to the Academic Office for further action latest by **$30^{th}$**

**April** for the Ph.D. students registered in the Ph.D. Program in the **Autumn Semester** and by **31st October for** the Ph.D. students registered in the Ph.D. Program in the **Spring Semester.**

In case the CERP report of a student is found **unsatisfactory** then he/ she will have to give another CERP before the PSPC within maximum THREE months from the corresponding CERP. If second time CERP is also unsatisfactory, then matter must be reported to the SPGC Convener for further action.

If required, the Thesis Supervisor(s) may arrange additional CERP between two **consecutives successful CERP**.

14. **Eligibility for Ph.D. Thesis Submission:** A Ph.D. student can submit his/ her Ph.D. thesis ONLY after minimum specified time for Ph.D. thesis submission AND meeting the minimum publication criteria.

    **Minimum Publication Criteria:** He/she has **at least *three*** publications from his/ her Ph.D. thesis in the SCI or other equivalent indexed journals having good impact factor. The list of publications submitted along with report of Open Seminar and Ph.D. Synopsis should **clearly mention the publications from the Ph.D. thesis work** and other publications during Ph.D.

    *The above-prescribed minimum publication criteria can be relaxed by the Senate Chairman based upon recommendation of the concerned Thesis Supervisor(s), Head and Dean, Academic Affairs on the merit of the application.*

15. **Minimum and Maximum Time for Ph.D. Thesis Submission: Minimum time period** for submission of Ph.D. thesis will be TWO years for **Category-I** and TWO and HALF years for **Category-II** and **Category-III** from the **Confirmation of Registration for the Ph.D. degree**.

    **Maximum time period** for submitting the Ph.D. thesis for full-time Ph.D. program will be **FIVE years** from the date of admission to the Ph.D. program. Request for further extension beyond the maximum duration must be sought from the Senate Chairman through proper channel.

16. **Course codes and grades for M.Sc., M.Tech., M.S. (Research) and Ph.D. Seminar and Thesis:** The codes for the M.Sc./ M.Tech. seminar is XX 698 (XX 697 for M.S.) and for Ph.D. Seminar course is **XX 797** (for the autumn semester) and **XX 798** (for the spring semester). The course **code of the Ph.D. thesis** will be **XX 899 and** course **codes of the M.Sc./ M.Tech. Research Projects** will be **XX 799 (3rd Sem) and XX 800 (4th Sem)** where XX is the code of the discipline (i.e. CS, EE, ME, HS, CH, MA, PH, BSE, MSE, etc.). Ph.D. thesis will be awarded **SS** as satisfactory and **US** as unsatisfactory, while the M.Sc. M.S. (Research) and M.Tech. thesis will be awarded letter grade.

17. **Grading of Ph.D. Thesis (XX 899) and consequences of unsatisfactory performance:** After successful completion of the required course work, a Ph.D. student will register for Ph.D. Thesis course (course code XX 899) every semester till completion of the Ph.D. program. It will be awarded Satisfactory (SS) or unsatisfactory (US) grade at the end of every semester by the concerned Ph.D. Thesis supervisor(s).

***Unsatisfactory performance in Ph.D. Thesis course in a semester may lead to temporarily stopping of Ph.D. scholarship until the student attains satisfactory grade in his/her Ph.D. Thesis course. If a Ph.D. student accumulates more than two US grades in XX 899 during his/her Ph.D. program, then that student may face early discontinuation from the Ph.D. program.***

18. **Policy for Class Attendance:** The weight-age for attendance is considered as 10 marks out of total 100 marks.

    Keeping marks for attendance is solely up to the discretion of the course coordinator. He/she may not keep marks for attendance, but if they keep marks for attendance, the below-mentioned proposed scheme must be implemented:

    a. Those students who have an attendance percentage of 80 and above (i.e., >=80%) would be awarded complete ten marks (i.e., 10/10).
    b. Students whose attendance percentages lie between 50 to 80 (50% - 80%) have their attendance score calculated as the ratio of their attendance percentage points and the threshold attendance percentage requirement, multiplied by 10. This hence guarantees a range of 6.25 to 10 marks attainable.
       For example, if the attendance threshold percentage is 80% and the student attends 60% of the classes, the student would be awarded a score of (60/80)*10=7.5 marks on 10.
    c. For students with border line attendance (for example: 49% or 79%), it is solely up to the course coordinator to consider the student for 50% minimum attendance or the threshold attendance of 80%.
    d. Students whose attendance percentages lie below 50 (i.e., <50%) would not be allowed to appear for the end-semester exams, would get an XX grade and would have to repeat the course. However, this decision of awarding XX grade is solely up to the discretion of the course coordinator.
    e. If any student misses classes for institute events like FLUXUS or to represent IIT Indore (in BAJA, ROBOCON etc.) or due to medical reasons, the students ought to be granted attendance for the missed classes as per the discretion of the course coordinator (on production of supporting documents or notification by the Academic Office/DOSA/Student Gymkhana as per the underlying reason).

**20. Policy for the Components of Evaluation**

a. As per the Institute policy, mid semester examination (MSE) and end semester examination (ESE) are the **essential components of the evaluation** with a **minimum weightage** of 20% and 40% and **maximum weightage** of 40% and 60% respectively.
b. Other components of evaluation such as quizzes, term paper, term project, home assignments, viva, etc. can constitute maximum weightage up to 40% ONLY.
c. MSE and ESE are to be conducted as per the scheduled exam time table and as per the notified seating plan.
d. The question papers for the MSE and ESE (even for open-book and take-home type) are to be submitted in the Academic Office within one working day in advance for distribution to all the invigilators for a particular MSE or ESE as per the seating plan.
e. **Only home assignments during the entire semester without MSE and ESE are NOT allowed to evaluate the students registered in a particular course. This is against the institute norms, dilutes the academic standards of the Institute and highly unfair to the students. The faculty members must desist from such practices.**

f. Any deviation from this policy without prior approval will be considered very seriously.

**21. Policy for Open-Book and Take-Home Exam**

a. The concerned faculty has to declare well in advance in the class about the **Open-book or Take-home exams** to the students. The faculty should also declare as to what will be allowed in the Open-book exams i.e. lecture notes, handouts, data handbook, data sheets, etc. The question paper must contain the detailed instructions for the **Open-Book Exam** so that there is no confusion to the invigilators.

b. The **Open-book exam** will be of same duration as per the institute norms for the MSE or ESE or quiz. For any deviation from this, approval from DOAA is to be taken.

c. Both Open-book and Take-home exams are to be conducted on the **scheduled day as per the exam time table** using the IIT Indore answer sheets only.

d. The **question papers** for both types of exams should be of such standards that they demand the necessity of having Open-book or take-home exam.

e. The question paper should be submitted to the Academic Office which distributes them to different invigilators according to the seating plan for the exam.

f. Other Details for the **Take-home exam**.

(i) The Take-home exam generally should be of **maximum 24 hours duration** only. For any duration more than this, prior approval from DOAA needs to be taken.

(ii) T**o maintain the fairness of take-home exams and t**o **avoid mass copying**, the questions should be **open-ended type** which cannot be solved by a group of students. To achieve this objective, the faculty is required to make **different sets of question papers equal in number to the number of the students registered in his/her course**. The concerned faculty should also inform the Academic Office as to which student is to be given which set of question paper so that students do not interchange the question paper after taking it to home.

(iii) Students should be asked to collect the Question paper from the Academic Office during the specified time only.

(iv) The answer sheets must be submitted to the Academic Office within the stipulated time along with the question paper. The concerned faculty will collect the answer sheet from the Academic Office as done in case of regular exams.

g. Any deviation from this policy without prior approval will be considered very seriously.

**22. Policy regarding Rescheduling of Mid Semester Exam (MSE) and End Semester Exam (ESE) and other Components of Evaluation:** Following policy is followed to deal with the request of re-scheduling the MSE, ESE and other components of evaluation scheduled as per the Academic Calendar:

a. Since, the schedules of MSE and ESE for both Autumn and Spring semester is known in 6-8 months in advance, therefore, the **students should NOT participate and/or organize any event/competition which clashes with dates of MSE and ESE**.

b. Requests of the students to reschedule MSE and ESE will NOT be considered for any **unapproved participation/event**s which clashes with the dates of MSE and ESE.

c. Faculty members will not entertain direct requests of the students to reschedule MSE, ESE and other exams for their unapproved participation/event.

d. Request for rescheduling the exams for **approved events/ participation** duly recommended by Students Gymkhana and DOSA must be sent to the Convener, Time Table Committee well in advance before the exam schedule is notified.

e. The MSE and ESE will **be pre-poned** and not **post-poned** in following extreme cases when there is clashes with the declared dates of MSE and ESE:

a. Interviews for IIMs admission
b. Medical emergency of the student for self
c. Approved participation in those Events/ Competitions which are recommended by the Students Gymkhana and DOSA. Deviation from this shall be treated on the merit of the case.
f. The concerned Faculty member / Course Coordinator should submit the question papers for such pre-poned exams to the Academic Office for conducting such exams.
g. The student will have to return the question papers along with the answer sheet for such pre-poned exams.
h. In a rare case if any exam however cannot be re-scheduled and a student still misses then he/she will be treated absent and awarded ZERO marks for such missed exams. (NB: ***It is compulsory to appear in ESE of a course. A student absent in the ESE of a course, is to be awarded the FR grade irrespective his/her performance in-semester components of evaluation***)
i. For better planning of the Academic Calendar (AC), the Student Gymkhana must inform the Academic Office about the reputed important Competitions and Events in which students are likely to participate at the time of preparation of the Academic Calendar. The Academic Office will try to take care of the events/participation as informed by the Students Gymkhana while preparing AC.

**23. System of evaluation and award of grades:** At the end of every semester, a student is awarded a grade based on his/her performance in examination, in every course registered by him/her. These grades are described by the letter grade and have numerical equivalent called the grade points as given below:

| Letter grade | Grade point | Remark |
|---|---|---|
| AP | 10 | Awarded to the students with exceptional performance in the course |
| AA | 10 | |
| AB | 9 | |
| BB | 8 | |
| BC | 7 | |
| CC | 6 | |
| CD | 5 | |
| DD | 4 | |
| FR | 0 | Credit not earned<br>• For compulsory course: Repeats the course<br>• For an elective course: Repeat or replace the course |
| XX | 0 | |
| PP | - | Pass (for non-credit course) |
| NP | - | Not Pass (for non-credit course) |
| AU | - | Pass (for audit course) |
| SS | - | Satisfactory (for Ph.D. thesis) |
| US | - | Unsatisfactory (for Ph.D. thesis) |

a. Scale of marks to award the above mentioned grades will be decided by the concerned Course Coordinator. However, grades will be authenticated by School Post Graduate Committee (SPGC) before releasing the grades. Course coordinator(s) should not reveal the grades to students before authorization by SPGC. They may show the Answer Sheets and marks to the students.

b. For AP grade upper cap is 2% with class strength of 25 or above i.e. for a class strength of 25 to 50, 1 student can be awarded AP grade.
c. Upper cap for AA grade is 15% (including 2% of AP grade), it can be rounded-off to higher integer number in case of fractional number, i.e. 6.1 can be made 7.
d. Highest grade that can be awarded to a student repeating a course [on account of earning FR or XX grade in that course in previous semester(s)] is BB.
e. Minimum grade for earning credits in a course is DD.

## 24. Rules and Regulations for 5 Year B.Tech. + M.Tech. program

**A. Eligibility:**

i. Only those B.Tech. students of IIT Indore are eligible to apply for B.Tech. + M.Tech. program who have completed all the prescribed courses of their B.Tech. program till the 6$^{th}$ Semester and secured a minimum CPI of 7.00 at the end of 6$^{th}$ Semester without earning any FR/ XX grade in any of the courses registered by him/her till 6$^{th}$ semester.
ii. There should not have been any disciplinary cases and/or penalty imposed or contemplated against the student. Student should not have been punished for any type of misconduct/ misbehavior/ indiscipline/ irregularities, and use of unfair means.

**B. Other Conditions:**

i. Those students who have been admitted for the dual degree program are not eligible for the campus placement activities in their 4$^{th}$ year.
ii. A student admitted to this 5-Year B.Tech. + M.Tech. program **will not have any exit option.** He/she will get the degree at the end of 5$^{th}$ year by fulfilling all the prescribed requirements of this program.
iii. The admitted students will be exempted from Internship, B.Tech. Project (BTP), English Communication Skills course (HS 641). However, they have to fulfill their minimum requirements in their M.Tech. Electives, PG Seminar course and M.Tech. Research Project work.
iv. The **last date of application** generally will be 31$^{st}$ March and list of selected candidates will be declared by 2$^{nd}$ week of May.

**C. Intake:** to be as decided by the discipline for each of its M.Tech. Program. This will be in addition to the seats sanctioned for the regular M.Tech. program.

**D. Selection Criterion and Shortlisting:** To be decided by the concerned discipline.

**E. Scholarship:** As per the MHRD norms from their 9$^{th}$ semester onwards provided the student has CPI $\geq$ 7.0 at the end of 8$^{th}$ Semester. Or else, after qualifying the GATE exam. If a student fails to fulfill either of these conditions, then the student will not be eligible for any MHRD scholarship.

**F: Fee:** Fee structure of M.Tech. program will be applicable from the 7$^{th}$ semester onwards.

## 25. Award of M.Sc./ M.Tech. degree to the internally converted students of dual degree Program (M.Sc. + Ph.D. and M.Tech. + Ph.D. )

The internally converted students of dual degree Program will be awarded the M.Tech./ M.Sc. degree with the wordings as follows:

"Indian Institute of Technology Indore upon recommendation of the Senate hereby confers the degree of M.Tech./ M.Sc. in recognition of completion of the prescribed requirements for the said degree (and partial fulfillment towards the M.Tech./ M.Sc. and Ph.D. dual degree program)."

For such students, the research component of their Master's project work may be included as part of their Ph.D. thesis, when they continue research on the same area and topic as their Master's thesis.

26. **A. Medal for graduating students of the Masters' Program:** There are two Institute Silver Medals for PG program. One will be awarded to the best performing M.Tech. student and other to the best performing M.Sc. student among all the graduating students, using following approved procedure:

- Each discipline will nominate top two candidates of its Master's program based on his/her CPI in coursework, CPI in thesis, overall CPI, research output for consideration of award to Silver medal. This should be immediately done after final viva of the PG thesis are completed but before 15th July.
- An evaluation committee consisting of Heads (or a faculty member nominated by the concerned Head) of those discipline which have PG program and an external expert from a reputed Institute/ Industry would be constituted by Dean, Academic Affairs.
- The nominated PG students will submit a short summary of their thesis work highlighting major innovation/research contribution and will also make presentation of their thesis work before the evaluation committee.
- The evaluation committee based on its evaluation would submit its recommendations for the best performer in the Master's program to Chairman, Senate through Dean, Academic Affairs for approval.

**B. Buti Foundation Gold Medal:** For a female student securing the highest CPI among graduating students of all the two-year PG programs.

**C. Medal for Best All Rounder Award:** There is one Institute Silver Medals for Best All Rounder Award. A committee approved by the Senate Chairman will call the nominations for the award of medal and will evaluate them on the basis of parameters approved by the Senate.

Following is the distribution of weightage for the different Components of the Evaluation:

- **Academics / Curricular activities: (30% for A(i) and A(ii) combined)**

(i) Credit Work
(ii) Research Work/ PG Thesis/BTech Project

- **Co-Curricular and Extra-Curricular Activities: (70%)**

(i) Position of Responsibilities held at institute level (15%)
(ii) Awards at National/International Level/ Social work/ Incubation and Entrepreneurial activities (15%)
(iii) Outstanding achievements in Cultural activities (10%)
(iv) Outstanding achievements in Science and Technology related activities (10%)
(v) Outstanding achievements in Games and Sports related activities (10%)
(vi) Outstanding achievements in Co-Curricular/Extra Curricular activities (10%)

In addition to above, for PG students of those department(s) where PG thesis component is not there, the grade points of course work done in lieu of PG thesis should be considered. Extra one mark should be given for each 'AP' grade obtained in a credited course for each nominated student.

**D. VPP Menon Medal of excellence for the Best Ph.D. dissertation by a woman Student**

**Guidelines:**

- A nomination form will be circulated to all faculty members.
- The Ph.D. scholar should submit the nomination to the HOD through her Research Supervisor

- HOD should nominate only 1 nomination to the committee from the respective Department. The HOD can formulate a department level committee for the nomination.
- Scholar defending her thesis during August 1st to June 5th of an academic year will be eligible to apply for the award in the upcoming convocation.
- The minimum criteria for the nomination of the Ph.D. thesis should be
    a) Examiners decision on considering the thesis for the Ph.D. award as per the academic office form : at least one
    b) At least one "A" evaluation grade from the Indian/International examiner in the thesis evaluation report.
    c) Thesis should not have got C or D in the thesis evaluation report.
    d) There should not be any disciplinary action pending/ taken against the student

- As the best research work publication/ outcome may take some time after the PhD submission, student may be given option of applying for this medal up to 01 year after the award of the degree.

**The committee comprising of the following members will be evaluating the nominations**

1) Nomination from Dean R&D among the two Associate Dean R&D's *
2) Nomination from Dean Academic among the two Associate Dean Academics*
3) Three External experts (Representing one expert from each School)
4) Dr. Nirmala Menon, Associate Professor, Humanities and Social Science, IIT Indore (In case the concerned faculty's student gets nominated, Prof. Nirmala Menon can nominate another faculty on her behalf.)

*If both associate deans from a section have their student on the nomination list, then the Dean should nominate another faculty colleague whose student is not applying for the award

**27. Rules for Institute Staff (IS) or Sponsored (SW) or Defense Forces (DF) categories doing PG and Ph.D. programs:**

Candidates from **Institute Staff (IS) category** or **Sponsored (SW) or Defense Forces (DF) category** can enroll for PG and Ph.D. programs of the Institute as **part-time** candidates subject to following rules and regulations which can be amended from time to time as per the requirement:

a. An IS category applicant must be a **permanent Institute employee** since last two years at the time of application. While, the **Sponsored category** applicant should have minimum two-year work experience in a **reputed Industrial/Research Organization**. Candidates under DF category should be serving officer in the Defense Forces of India.

b. The **part-time candidate** will not be entitled for payment of any fellowship/stipend during the entire academic program.

c. The IS category applicant is required to submit a "No-Objection Certificate (NOC)" from the Head of the concerned department/section while, SW and DF category applicant should submit the NOC from the Competent Authority of his/her parent organization along with his/her application in the prescribed form. ***Officials sponsored by Central Government, State Government and PSU are exempted from submission of sponsorship letter*** but ***have to submit NOC and other required documents.***

d. (A) The **NOC of the IS category** applicants should clearly state that:
    - The candidate is allowed to pursue the academic program on **part-time** basis.
    - The admission to the academic program will not affect his/her discharging of the assigned duties from the Institute.

    (B)The **NOC of SW and DF category** applicant should clearly state that:

- The sponsoring organization shall fully relieve him/her of his/her duties in the organization during the **time period of required course work** (for **Part-Time**) **/ entire duration** (for **Full-Time**) of the academic Program.

e. The **Part-time Sponsored** category students will have to do the required course work on full-time residential basis.

f. The SW and DF **category** candidate may be permitted to have **one thesis/ reporting supervisor** from his/her parent organization after consent from the Principle Thesis Supervisor (i.e. a faculty from IIT Indore). The Principal Supervisor will be solely responsible for ensuring the fulfillment of all the academic requirements as per the Institute Rules and Regulations. The supervisor of SW and DF category candidate must have the qualifications and experience as follows:
   - With Ph.D. qualification should have a minimum of 5 years post-Ph.D. experience in a reputed Industrial/Research/Defense Organization; OR

   - With M.Tech./ME/MPhil or equivalent qualification should have minimum **10 years post-PG qualification experience** in a reputed Industrial/Research/Defense Organization; OR

   - With B.E./ B.Tech./ M.C.A./ M.B.A./ M.Sc./ M.Com./ M.A. or equivalent qualification should have minimum **15 years post-qualification** experience in a reputed Industrial/ Research/ Defense Organization.

g. The eligibility and process of application, admission process, registration fee, registration process, academic rules and regulations and other academic procedures will be same as applicable to full-time category students.

h. IIT Indore will have exclusive copyright on the Ph.D./ PG thesis of the Sponsored category students while Patents and innovations will be governed by the IPR policy of IIT Indore.

i. The Institute reserves the right to cancel/ renew the admission to PG/ Ph.D. program of Institute Staff (IS) and Sponsored (SW) candidate in case of change of employment.

**Details of the other specific conditions for Part-time Ph.D. and PG Programs:**

| | **Ph.D. Program (part-time)** | **PG Program (part-time)** |
|---|---|---|
| **Minimum duration of required course work** | Same as full-time candidates as mentioned in the Institute Rules and Procedures for and PG and Ph.D. programs. | |
| **Maximum duration of the required course work** | i) TWO semesters with M.Tech./ M.E./ M.Phil. or equivalent qualification from the date of joining the program.<br>ii) THREE semesters with M.Sc./ M.A./ M.Com./ M.B.A./ B.Tech./ B.E. or equivalent qualification from the date of joining the program. | FOUR semesters from the date of joining the program. |
| **Minimum time required for thesis submission** | **SIX months** more as compared to the **full-time** candidates i.e. **30 months** for M.Tech./ M.E./ M.Phil. or equivalent qualification and **36 months** for B.Tech./ B.E./ M.Sc./ M.A./ M.Com./ M.B.A. or equivalent qualification from the *date of confirmation in the Ph.D.* | Three years from date of joining the program. |

| | | |
|---|---|---|
| | *program*. (i.e. from the first working day of the next semester in which the student successfully completes his/ her required course work). | |
| **Maximum duration of the program** | 7 Years from date of joining the program. | 4 Years from date of joining the program. |
| **Expectations from IS category candidates** | The Institute expects at least two year continuous service from the date of completion of the Ph.D. program. | The Institute expects at least one year continuous service from the date of completion of the PG program. |

The forms required for Institute Staff (IS), Sponsored (SW) and Defense Forces (DF) College Teacher (CT) and QIP category students for doing PG and Ph.D. program at IIT Indore are available at https://academic.iiti.ac.in/phdforms.php.

## 28. Rules for Full-time M.Tech., MS (Research), and Ph.D. Program under College Teacher (CT) category:

**Eligibility requirements (ER)**

a. The College/Institute/University from which the faculty member is sponsored should be **amongst top 200 NIRF ranked College or Institute or University in respective category** in the immediate preceding year. The NIRF ranking will not be mandatory for faculty members sponsored from Government Engineering College/ Institution/University.
b. The applicant must be **Permanent Employee of the sponsoring College/ Institute/ University**. The Sponsoring Organization must mention in the No Objection-cum-Sponsoring-Experience Certificate (attached below) that it will continue to pay remuneration to the candidate for the entire duration of his/ her academic program on Full-time basis.
c. For admission to the Ph.D. program applicant should have **at least one publication** in SCI indexed journal, proceedings of peer reviewed ranked international conferences/ chapter in a book published by reputed international or national publishers or should a patent or should have developed state-of-the-art patentable and/ or transferable technology. However, this criterion is not mandatory for the admission to MTech and MS (Research) programs.
d. Candidate will be admitted as **Full Time candidate (For M.Tech. 2 years, for MS (Research) 2 years [extendable maximum for 6 months], and for Ph.D. 3 years).** The Sponsoring Organization will certify in the No Objection-cum-Sponsoring-Experience Certificate that the candidate will be relieved from all the duties and responsibilities from the Institute to enable him to complete the academic program on Full-time basis within the prescribed duration. If extension for more duration is required, then the candidate should submit application through his/her Sponsoring Organization to the competent authority of IIT Indore for consideration.

**Minimum Educational Qualification (MEQ):**

As per the M.Tech., MS (Research), Ph.D. advertisement of the concerned Discipline/ School/ Center in which is she/ he interested to apply.

**Other Rules and Regulations**

a. Candidates admitted under this category will be required to pay registration fee on semester basis as applicable to Full-time student of IIT Indore with following exemptions:

i. Group Insurance Premium per annum (per semester for Ph.D. students) and Medical Fee, if the candidate is not availing medical facilities of the Institute.
ii. Mess Security Deposit and Dining charges, if the candidate is not availing dinning facility of the Institute.
iii. Hostel Security Deposit and Accommodation Charges, if the candidate is not availing hostel facility of the Institute

b. All the rules and regulations of concerned academic program of IITI will be applicable to CT category students.
c. Course-work, selection of thesis supervisor(s) and constitution of PG/ Ph.D. Student Progress Committee (PSPC) to be done as per applicable rules and regulations of IITI.
d. Comprehensive Evaluation of Research Progress (CERP) will be conducted as per the policy of the institute for Full-time Ph.D. student. In case the candidate is allowed to convert as Part-time Ph.D. student then CERP will be conducted in every 6 months before last date of Ph.D. thesis (i.e. XX 899) grade submission in that respective semester.
e. Maximum duration for completion of Ph.D. program will be five years as applicable to Full-Time Ph.D. student of IIT Indore.
f. No Objection-cum-Sponsoring-Experience Certificate from the Sponsoring University/ College/ Institution for Ph.D. Applicant under College Teacher Category (CT) must be submitted on letterhead of the Institute (format of form is available at https://academic.iiti.ac.in/phdforms.php)

**29. Rules for Ph.D. Program (Part Time) under College Teacher (CT) category**

**Eligibility Requirements (ER):**

a. The applicant should be a faculty member from a **Government Engineering College of Madhya Pradesh**.
b. The applicant must be a **Permanent Employee** of the sponsoring College/ Institute.
c. For admission to the Ph.D. program applicant should have **at least one publication** in SCI indexed journal or proceedings of peer reviewed ranked international conferences/ chapter in a book published by reputed international or national publishers or should have a patent or should have developed state-of-the-art patentable and/ or transferable technology.
d. Selected applicants will be admitted as Part Time candidates in Ph.D. program for a maximum duration of 7 years, out of which **candidate will be required to complete the required course work in-person at IIT Indore campus. The duration of the course work will be One Semester (for M.Tech./ M.E./ M.Phil. or equivalent qualified) and Two Semester (for M.Sc./ M.A./ M.Com./ M.B.A./ B.Tech./ B.E. or equivalent qualified) from the date of joining the program.** After completing the required course work, research work can be continued by them at their respective Institution/ College.
e. The sponsoring institute should permit the selected employee to visit IIT Indore during Vacations and Holidays to continue and complete PhD research work. For the duration of PhD, the candidate should be spared from other administrative work during vacations.

f. The Sponsoring Organization must mention in the No Objection-cum-Sponsoring-Experience Certificate that it will continue to pay remuneration to the candidate for the entire duration of his/ her Ph.D. program on Part Time basis.

g. The Sponsoring Organization will certify in the No Objection-cum-Sponsoring-Experience Certificate that the candidate will be relieved from the duties and responsibilities from the Institute to enable him to complete the required course work within the prescribed duration. If extension for more duration is required, then the candidate should submit application through his/her Sponsoring Organization to the competent authority of IIT Indore for consideration.

**Minimum Educational Qualification (MEQ):**

As per the Ph.D. advertisement of the concerned Department/ School/ Center of IIT Indore in which she/ he is interested to apply.

**Other Rules and Regulations:**

a. Candidates admitted under this category will be required to pay registration fee on semester basis as applicable to Full-time student of IIT Indore with following exemptions:

i. Group Insurance Premium per annum (per semester for Ph.D. students) and Medical Fee, if the candidate is not availing medical facilities of the Institute.

ii. Mess Security Deposit and Dining charges, if the candidate is not availing dinning facility of the Institute.

iii. Accommodation Charges, if the candidate is not availing hostel facility of the Institute

b. All the rules and regulations of concerned academic program of IITI will be applicable to College Teacher Part-time category students.

c. Course work, selection of thesis supervisor(s) and constitution of Ph.D. Student Progress Committee (PSPC) to be done as per applicable rules and regulations of IITI.

d. Comprehensive Evaluation of Research Progress (CERP) will be conducted as per the policy of the institute for Full-time Ph.D. students.

e. No Objection-cum-Sponsoring-Experience Certificate from the Sponsoring University/ College/ Institution for Ph.D. Applicant under College Teacher Category (CT) must be submitted on letterhead of the Institute (format of form is available at https://academic.iiti.ac.in/phdforms.php)

**30. Policy for temporary withdrawal of students from Academic Program on grounds misconduct and violation of institute rules:** Any student found guilty for misconduct and violation of institute rules then he/ she will be withdrawn temporarily up to two semesters from his/ her Academic Program on recommendation of the Disciplinary Action Committee.

If such offence is very serious or an offence is repeated frequently then the concerned student will be withdrawn completely from the academic program based on recommendation of the Disciplinary Action Committee.

**31. Policy for FA to TA conversion.**

The Ph.D. students who join as Fellowship Awardee (in Projects), and in case of non-submission of the thesis before the completion of the project, students will be allowed for TA scholarship, equivalent to the duration they spent in the Project as a Ph.D. student or maximum five years, whichever is earlier. The fulfillment of the requirement of GATE qualification and maximum 3 TA Ph.D. student rule will be applicable as earlier. At the time of admission of Ph.D. student under the category FA (Project), minimum funding for 1.5 years must be ensured by the concerned Thesis Supervisor(s) and the Department.

**Procedure for Submission of Ph.D. thesis**

**1. ELIGIBILITY FOR Ph.D. THESIS SUBMISSION:** A Ph.D. student can submit his/ her Ph.D. thesis ONLY after meeting the requirements mentioned in (1A) **AND** 1(B),

**(1A) Minimum Publication Criteria:** He/she has **at least *three*** publications from his/ her Ph.D. thesis in the SCI or other equivalent indexed journals having good impact factor. The list of publications submitted along with report of Open Seminar and Ph.D. Synopsis should **clearly mention the publications from the Ph.D. thesis work** and other publications during Ph.D.

*The above-prescribed minimum publication criteria can be relaxed by the Senate Chairman based upon recommendation of the concerned thesis supervisor(s), Head and Dean, Academic Affairs on the merit of the application.*

**AND**

**(1B) MEETS THE MINIMUM TIME REQUIREMENT CRITERIA: Minimum time period** for submission of Ph.D. thesis from the date of **Confirmation of Registration to the Ph.D. degree (i.e.** from the **first working day of the semester** following the one in which they have successfully completed the **required course work**) is

(a) TWO years under **Category-I** (Ph.D. students with **M.Tech./ M.Phil. Or equivalent qualification**),

(b) TWO and HALF years under **Category-II (**Ph.D. students having **M.Sc./ M.A./ M.Com./ M.B.A. or equivalent qualification** admitted to a **Science or HSS discipline)** and **Category-III** (**B.Tech./ M.Sc. or equivalent qualification** admitted to Ph.D. Program in an **Engineering discipline**)

**2. OPEN SEMINAR:** Before submitting the Ph.D. thesis, an **OPEN SEMINAR** is to be given by the concerned Ph.D. student about his/ her Ph.D. thesis work and in the presence of the Ph.D. Student's Progress Committee (PSPC). This seminar will be OPEN to the entire IIT Indore Community and notice of this will be sent by the Thesis Supervisor(s) one week in advance. ***Before the OPEN SEMINAR, the Ph.D. student will send the draft of synopsis of his/her Ph.D. thesis to ALL the PSPC members.***

The PSPC may suggest the Ph.D. student to incorporate all those feasible comments/suggestions received during the OPEN SEMINAR which can improve the quality of the Ph.D. Thesis. The report of the successful Open Seminar must be submitted by the Thesis Supervisor(s) in the **prescribed form** (**Form-PTS 1**) well in advance before the student proceeds to submit his/ her Ph.D. Synopsis and the Ph.D. Thesis.

**3. SUBMISSION OF Ph.D. SYNOPSIS and THESIS:** After conduct of **SUCCESSFUL OPEN SEMINAR**, the Ph.D. student through his/her thesis supervisor(s) has to submit the following:

(a) One copy of **synopsis** of his/ her **Ph.D. thesis (both in softcopy and hard copy)** within **maximum 15 days** from the date of the Open Seminar along with the **required Certificates** (**Form-PTS 2**). The synopsis should be a **concise summary** (including the figures, tables, few references, and list of publications) of the Ph.D. thesis. It should not contain more than **8-12 pages** of A4 size with the text typed in **12 pt. Times New Roman font having 1.5 spacin**g.

The **primary objective** of the synopsis is to enable the reader to judge whether, prima facie there exists a case for accepting the proposed Ph.D. thesis for the award of the Ph.D. degree. The synopsis should therefore, clearly list the contributions resulting from the investigations carried out by the candidate, which has led to the advancement of knowledge in the field of investigation.

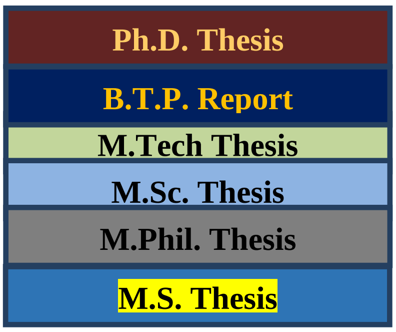
In order to fully appreciate the candidate's contribution, it is necessary to put it in a proper context. Therefore, it is **recommended that the synopsis** should contain a brief account of the existing knowledge and the inadequacy or gaps in this knowledge that led the candidate to the formulation of the problem of his/ her investigation. A few references, needed in this respect should be included but their number should normally, not exceed ten. List of publications (including published, accepted, submitted in the refereed journals and conferences) or Patents (granted or applied) from the Ph.D. thesis work should be included.

In case the Ph.D. student gets employment and wants to submit the synopsis and Ph.D. thesis from outside the institute after successful open seminar then the request can be made in the prescrbied format (**form-PTS 2a**)

(b) One soft copy and/or required number of spiral bound copies (if needed for external examiner(s)) of the **Ph.D. thesis** along with the *required form* (**Form-PTS 4**) within **maximum ONE month** from the date of the Open Seminar along with its editable softcopy in the CD/ DVD and by e-mail. The Ph.D. thesis must be written in the prescribed format as mentioned below:

**Printing Format:** BOTH SIDE PRINTING
**Paper:** Executive Bond
**Font:** Times New Roman
**Line Spacing:** 1.5

| **Program** | **Color of cover page** | **Font color on cover** |
|---|---|---|
| *Ph.D.* | *Maroon* | *Golden* |
| *BTP* | *Navy Blue* | *Golden* |
| *M.Tech.* | *Pistachio Green* | *Black* |
| *M.Sc.* | *Sky Blue* | *Black* |
| *M.Phil.* | *Light Gray* | *Black* |
| M.S. | Aqua Blue | Black |



4. **Ph.D. THESIS EXAMINERS:** Thesis will be evaluated by the two External Examiners. Ph.D. thesis supervisor(s) will suggest details of TWO or FOUR *examiners within India* and TWO or FOUR *examiners from outside India* in the *prescribed format* (**Form-PTS 3**) for evaluating the Ph.D. thesis:

   Form PTS-3: List of Suggested Examiners for Evaluation of the Ph.D. Thesis will be obtained in following given options:

   **Option-1:** Thesis Supervisor will submit Form PTS-3 with list of four examiners (2 national and 2 international) with consent emails from examiners to evaluate the Thesis.

**<u>Option-2:</u>** List of eight examiners (4 national and 4 international) without consent email.

The proposed Ph.D. thesis examiners should have Ph.D. qualification and should be

(a) Professor in an Institute/ University of international/ national repute, OR
(b) Professor emeritus of international/ national repute but active in his/her research field, OR
(c) Scientist-F or above in a recognized research organization, OR
(d) An individual having minimum 10 years of post-Ph.D. industrial experience.

***Same external examiner should not be proposed at least for a period of TWO years, after having examined thesis of a Ph.D. student under the same Thesis Supervisor.***

From the list of suggested examiners, the Chairman, Senate@ in consultation with the Dean, Academic Affairs* will give order of preference to these examiners. The **Ph.D. synopsis** will be sent to the Ph.D. thesis examiners in the order of preference for getting their consent to evaluate the Ph.D. thesis within SEVEN days of receipt of such request. If NO consent or reply is received within SEVEN days from the first examiner, then the Ph.D. synopsis will be sent to the next examiner and so on.

From the list of suggested examiners, if NO examiner agrees to evaluate the Ph.D. thesis then the concerned Ph.D. thesis supervisor(s) will be asked to suggest new examiners.

** (a) If Dean, Academic Affairs (DOAA) is the Ph.D. thesis supervisor, then Director may consult Dean R & D (DORD).*
*(b) If both DOAA and DORD are the Ph.D. thesis supervisors, then Director may consult DOFA.*
*@ If the Director is the Ph.D. thesis supervisor then DOFA in consultation with DOAA may select the Ph.D. thesis examiners.*

The names of the selected examiners will be kept confidential till the Ph.D. Oral Examination is conducted successfully.

5. **EVALUATION OF THE Ph.D. THESIS BY THE EXAMINERS:** The Ph.D. thesis examination board will consist of the Thesis Supervisor(s) and the thesis examiners selected as mentioned in (4). The softcopy and hardcopy of the Ph.D. thesis will be sent to ALL the examiners.

The examiners will be requested to send the evaluation report of the Ph.D. thesis **within TWO months** from the receipt of the Ph.D. thesis in the prescribed format (**Form-PTS 5**).

If the evaluation report is **not** received within a period of two months, then a reminder will be sent to the examiner(s) for sending the evaluation report within **next two weeks**. In exceptional cases, the examiner(s) can be given **maximum one month additional time** for the Ph.D. thesis evaluation i.e. maximum within three months the evaluation report should be received.

*In unfortunate case of death of an examiner, a new examiner will be selected and the process of evaluation of the Ph.D. thesis will be started afresh.*

The Ph.D. examiner will be asked to recommend ONLY one of the following four options along with the detailed report/feedback justifying his/her recommendation.

**(A)** The thesis in its present form is satisfactory for the award of the Ph.D. Degree.

**(B)** The thesis is recommended for the award of the Ph.D. degree subject to the clarification of the queries/ comments before the Ph.D. Oral Examination Board. If the Ph.D. Oral Examination Board deems it appropriate, the same may be incorporated in the thesis based on the discussions during the viva-voice examination. The revised thesis need not be sent to the examiner.

**(C)** The thesis needs to be revised as per suggestions enclosed and the thesis be sent for re-evaluation.

**(D)** The thesis be rejected.

<table>
<tr><th>Recommendation of the Thesis Examiners including the Thesis Supervisor(s)</th><th>Action to be taken</th></tr>
<tr><td>1. A and/or B</td><td>(A) Oral Examination can be conducted and the required action to be taken if any recommendation is of 'B' category.</td></tr>
<tr><td>2. Any one examiner recommending option 'C'</td><td>(A) The thesis is to be REVISED as per the suggestions of the examiner who has recommended 'C' option. The Revised thesis to be resubmitted and will be sent 'ONLY' to that examiner.<br>(B) The Oral examination to be conducted only when, there is a change in the recommendation.</td></tr>
<tr><td>3. Examiner(s) recommending option 'D'</td><td>(A) The thesis is to be REWORKED and REVISED in consultation with the Thesis Supervisor(s) incorporating the comments/feedback of the Examiner(s) who has/have given 'D' category recommendation in such a way that it improves the overall quality of the Ph.D. work.<br>(B) The Thesis is to be resubmitted and will be sent to different Examiner(s) for the evaluation.</td></tr>

The revised Ph.D. thesis must be submitted along with the recommendation of the concerned PSPC, DPGC Convener and the Head.</td></tr>
</table>

**6. ORAL EXAMINATION OF THE Ph.D. THESIS and the ORAL EXAMINATION BOARD (OEB):** The Ph.D. oral Examination Board will consist of the following:

a. Chairman, nominated by the Chairman, Senate from the four names suggested by the thesis supervisor(s).
b. Thesis supervisor(s)
c. Thesis Examiner (within India) as External Examiner
d. Other PSPC members

The date and time of the oral examination will be decided by the Chairman (OEB) in mutual consultation with thesis supervisor(s) and other members of OEB as well as depending upon the availability of the Thesis Examiner (within India). It will be open to the IIT Indore community. A notice for same must be circulated by the Chairman (OEB) to all the students and faculty in the institute at least one week in advance.

As per the approval of the Senate Ph.D. viva can be conducted beyond regular working hours or beyond weekdays with prior permission and subject to ensuring proper advance information/ publicity and ensuring considerable attendance of the audience other than members of Oral Examination Board in the viva. Attendance of the audience to be recorded and to be submitted along with the report of Ph.D. viva.

**Guidelines for OEB chairman for conducting Ph.D. viva:**

1. Thesis supervisor(s) will suggest four names at the level of Associate Professor and above for consideration of OEB Chairperson.
2. Deans and HoDs should not be suggested for OEB Chairperson.
3. Chairperson of the OEB will contact the external examiner for fixing the date and time of the PhD viva. The schedule must be finalized in such a way that it is convenient to all the members of OEB and enable them attend the PhD viva in person.
4. OEB Chairperson should ensure that all reports of the examiners, rebuttal /corrections, and the revised thesis are shared with the OEB members before the PhD viva.
5. OEB Chairperson should ensure that all the members of OEB, including the ex-officio, are given equal importance and chance to ask questions in a PhD Viva.
6. OEB chairperson should ensure that all the members of OEB sign the PhD viva report and it is submitted to the Academic Office on the day of PhD viva itself.

The ***report of the Oral Examination*** must be submitted to the Academic Office in the prescribed format (**form PTS 6**).

After the successful Oral Examination or Ph.D. Viva, the student has to submit the ***soft copies*** of the Ph.D. thesis incorporating all the corrections of the Ph.D. Oral Examination Board along with the required form (**form PTS 7**) for the same. The students will be required to submit a soft copy of thesis in PDF format, with signature of the concerned student and Thesis Supervisor on the certificate, to the Central Library and Department Library. If required a Hard Copy of the thesis can be submitted to the concerned Thesis Supervisor. The central library and the department library should maintain the database accessible to the institute community.

**7. HONORARIUM to the Ph.D. THESIS EXAMINERS:** Following honorarium will be paid to the Ph.D. thesis examiners. The Head of Discipline or DPGC Convener must ensure that the payment of honorarium to Thesis examiner is made at the earliest and preferably on the day of Ph.D. Oral Examination itself. Advance may be drawn for, on the spot payment.

| | Examiner (with India) | Examiner (outside India) |
|---|---|---|
| Evaluation of the Ph.D. Thesis | INR 8,000/- | US $ 200 |
| Conducting the Ph.D. Oral examination | INR 4,000/- + Travelling expenses from the workplace to IIT Indore and local hospitality | --- |

**Procedure for Submission and Evaluation of M.Tech./ M.Sc. Thesis**

Last date for submitting **softbound copies** of M.Tech./ M.Sc. thesis in the prescribed format will be **30th June along** with form **PGTS-1**. The Oral Examination Board (OEB) for M.Tech./ M.Sc. thesis will consist of

1. Head or a faculty member nominated by him (Chairman)
2. The DPGC Convener
3. Members of the PSPC of the Student (which includes thesis supervisor(s), one expert from the discipline and one expert from other discipline)

The last date of conducting the **Oral Examination/ Thesis Defense** of the M.Tech./ M.Sc. thesis and report of Oral Examination along grade awarded in the PG thesis must be submitted latest by the **last date as per the Academic Calendar** in the prescribed form **PGTS-2**. The notice for M.Tech./ M.Sc. thesis oral examination should be circulated at least **5 days in advance** to the entire IIT Indore community.

The last date of submitting the **soft copies** of M.Tech./ M.Sc. thesis after incorporating all the changes suggested by OEB along with the **No dues Certificate** (NDC) will be **30 June** along with **form PGTS-3.** After submission of hardbound copies of the M.Tech./ M.Sc. thesis and NDC**, the provisional degree certificate can be issued to an M.Tech./ M.Sc. student.** The date of M.Tech./ M.Sc. thesis oral examination will be considered as date of completion of the program. The students will be required to submit a soft copy of thesis in PDF format, with signature of the concerned members of the OEB on the certificate, to the Central Library and Department Library. If required a Hard Copy of the thesis can be submitted to the concerned Thesis Supervisor. The central library and the department library should maintain the database accessible to the institute community.

*(In case there is a holiday/ vacation on the above-mentioned dates then it should be replaced by the next working day)*

## Procedure for Submission and Evaluation of MS (Research) Thesis

**1. ELIGIBILITY FOR MS (RESEARCH) THESIS SUBMISSION**: Students of MS (Research) can submit his/ her thesis ONLY after meeting the requirements mentioned below:
a. Successful completion of course work and research work.
b. Student must have one journal publication in SCI index from his/ her MS (Research) thesis for completion of the degree.
***"In view of situation of COVID-19, Senate resolved in its 23rd meeting held on 5 June 2020 to exemption from the minimum criteria of publication for MS (Research) Batch-2018. This is only for AY 2019-20, 2020-Spring Semester."***

**2. SUBMISSION OF SYNOPSIS AND SOFTBOUND COPY OF THESIS:** Student will submit softcopy of synopsis and softbound copy of thesis to the Academic Office along with prescribed format (Form-MSRTS-1) latest by 30 June.

**3. LIST OF SUGGESTED EXAMINERS FOR MS (RESEARCH) THESIS:** Thesis supervisor(s) will suggest two/four External Examiners (within India) in the prescribed format (MSRTS-2) for evaluating the MS (Research) thesis in the given two options.

Form MSRTS-2: List of Suggested Examiners for Evaluation of the MS (Research) Thesis will be obtained in following given options:

**Option-1:** Thesis Supervisor will submit Form MSRTS-2 with list of two Indian examiners with consent emails from examiners to evaluate the Thesis.

**Option-2:** List of four Indian examiners as per the existing practice without consent email.

The proposed MS (Research) thesis examiners should have Ph.D. qualification and should be:

(a*) Associate Professor/ Professor in an Institute/ University of international/ national repute, OR*
*(b) Professor emeritus of international/ national repute but active in his/her research field, OR*
*(c) Scientist-F or above in a recognized research organization, OR*
*(d) An individual having minimum 10 years of post-Ph.D. industrial experience.*

***Same external examiner should not be proposed at least for a period of TWO years, after having examined thesis of a MS (Research) student under the same Thesis Supervisor.***

From the list of suggested examiners, the Chairman, Senate@ in consultation with the Dean, Academic Affairs* will give order of preference to these examiners. The MS (Research) synopsis will be sent to the external examiners in the order of preference for getting their consent to evaluate the MS (Research) thesis within SEVEN days of receipt of such request. If NO consent or reply is received within SEVEN days from the first examiner, then the MS (Research) synopsis will be sent to the next examiner and so on.

From the list of suggested examiners, if NO examiner agrees to evaluate the MS (Research) thesis then the concerned MS (Research) thesis supervisor(s) will be asked to suggest new examiners.

**(a) If Dean, Academic Affairs (DOAA) is the MS (Research) thesis supervisor, then Director may consult Dean R & D (DORD).*
*(b) If both DOAA and DORD are the MS (Research) thesis supervisors, then Director may consult DOFA.*
*@ If the Director is the MS (Research) thesis supervisor then DOFA in consultation with DOAA may select the thesis examiners.*

The names of the selected examiners will be kept confidential till the MS (Research) Oral Examination is conducted successfully.

**4. EVALUATION OF THE MS (RESEARCH) THESIS BY THE EXAMINERS:** The MS (Research) thesis will be evaluated by the External Examiner selected as mentioned in above. The softcopy and hardcopy of the MS (Research) thesis will be sent to ALL the examiners.

The examiners will be requested to send the evaluation report of the MS (Research) thesis within one month from the receipt of the MS (Research) thesis in the prescribed format
(Form-MSRTS-3).

If the evaluation report is not received within a period of one month, then a reminder will be sent to the examiner(s) for sending the evaluation report within next one week. In exceptional cases, the examiner(s) can be given maximum one-month additional time for the MS (Research) thesis evaluation i.e. maximum within two months the evaluation report should be received.

In case report not received from existing an examiner, a new examiner will be selected and the process of evaluation of the MS (Research) thesis will be started afresh.

The MS (Research) examiner will be asked to recommend ONLY one of the following four options along with the detailed report/feedback justifying his/her recommendation.

**(A)** The thesis in its present form is satisfactory for the award of the MS (Research) Degree.
**(B)** The thesis is recommended for the award of the MS (Research) degree subject to the clarification of the queries/ comments before the MS (Research) Oral Examination Board. If the MS (Research) Oral Examination Board deems it appropriate, the same may be incorporated in the thesis based on the discussions during the viva-voice examination. The revised thesis need not be sent to the examiner.
**(C)** The thesis needs to be revised as per suggestions enclosed and the thesis be sent for reevaluation.
**(D)** The thesis be rejected.

| Recommendation of the Thesis Examiners including the Thesis Supervisor(s) | Action to be taken |
|---|---|
| 1. A and/or B | (A) Oral Examination can be conducted and the required action to be taken if any recommendation is of 'B' category. |
| 2. Any one examiner recommending option 'C' | (A) The thesis is to be REVISED as per the suggestions of the examiner who has recommended 'C' option. The Revised thesis to be resubmitted with recommendations of Thesis Supervisor(s), PSPC members, DPGC Conveners and Head. It will be sent 'ONLY' to that examiner. (B) The Oral examination to be conducted only when, there is a change in the recommendation. |
| 3.Examiner(s) recommending option 'D' | (A) The thesis is to be REWORKED and REVISED in consultation with the Thesis Supervisor(s) incorporating the comments/feedback of the Examiner(s) who has/have given 'D' category recommendation in such a way that it improves the overall quality of the MS (Research) work. (B) The Thesis is to be resubmitted and will be sent to different Examiner(s) for the evaluation. The Revised thesis to be resubmitted with recommendations of Thesis Supervisor(s), PSPC members, DPGC Conveners and Head. |
| 4. The Thesis supervisor(s) recommending option 'D' | (A) In the rarest of the rare, the request of the MS (Research) student for changing the supervisor may be considered. (B) The MS (Research) thesis is to be reworked as per the guidance of the new Thesis Supervisor. |

**5. EVALUATION OF THE MS (RESEARCH) THESIS BY THE EXAMINERS:** The Oral Examination Board (OEB) for MS (Research) thesis will consist of

1. Chairman, nominated by the Chairman, Senate from the names suggested by the thesis supervisor(s).
2. External Examiner
3. Thesis Supervisor
4. PSPC members
5. Head or a faculty member nominated by the Head

The date and time of the oral examination will be decided by the OEB Chairman depending upon the availability of the other members of the OEB. **Only External Examiner may attend the viva online**. It will be open to the IIT Indore community. A notice for same must be circulated by the OEB Chairman to all the students and faculty members in the institute at least one week in advance. The report of the Oral Examination must be submitted to the Academic Office in the prescribed format (Form-MSRTS-4).

The last date of submitting the final copy of MS (Research) thesis after incorporating all the changes suggested by OEB along with the No dues Certificate (NDC) with prescribed format (MSRTS-5) will be one week.

After submission of final copy of the MS (Research) thesis and (NDC), the provisional certificate can be issued to MS (Research) student. The date of MS (Research) thesis oral examination will be considered as date of completion of the program. The students will be required to submit a soft copy of thesis in PDF format, with signature of the concerned members of the OEB on the certificate, to the Central Library and Department Library. If required a Hard Copy of the thesis can be submitted to the concerned Thesis Supervisor. The central library and the department library should maintain the database accessible to the institute community.

**HONORARIUM TO THE MS (RESEARCH) THESIS EXTERNAL EXAMINERS:** Following honorarium will be paid to the MS (Research) thesis examiners.

| | **Examiner (with India) Examiner** |
|---|---|
| Evaluation of MS (Research) thesis and conduct of Oral Examination | INR 5,000/- |

# Course Structure
# of
# PG and Ph.D. Program in
# Humanities and Social Sciences
# and Syllabi of Courses

**Course Structure of MS (Research), MS (Research) + Ph.D.**
**in the Humanities and Social Sciences (from AY 2021-22)**

**Minimum Educational Qualification:** Four year degree or Masters' degree (MA/ MSc or Equivalent) or Five-year integrated degree (with first division as defined by the awarding Institute/ University for Indian applicants and equivalent to International applicants, as assessed by the Institute) in any subject. *Relaxation of 5% in qualifying degree is applicable for SC, ST and PwD category applicants.*

**Eligibility Requirement:**
**(a) International Students**: Valid and relevant TOEFL or IELTS
**(b) Indian Students**: A valid GATE Score in HSS.

**Categories of Admission:**
**(a) International Students:** (i) International self-financed **(ISF)** students; (ii) International students sponsored by non-government organizations or by a reputed industry (**ISW**); (iii) International students sponsored by foreign government or its organizations or through mutual collaborative programs of India with other countries (**GSW**)
**(b) Indian Students:** i) **TA:** Teaching Assistantship; ii) **DF**: Candidates sponsored by the Defense Forces; (iii) **SW:** Sponsored by a reputed Industry or Research organization; (iv) **CT:** College Teacher as per Institute defined Criteria; (v) **IS**: Institute Staff of IIT Indore on part-time basis.

**Duration of the Program:** 2 years (on full-time basis) with extendable by maximum one semester.

**Total Intake:** 5 seats for TA category with reservation roaster as per GOI norms. And eligible candidates of **Non-TA category** from DF, SW, CT, and IS categories (without scholarship).

**Scholarship:** As per MOE notification for MS Program

**Evaluation:** Students are expected to identify their Thesis Supervisor(s) at the time of admission and latest by the end of August so that PG student progress committee (PSPC) can be formed and students can start the research work early into the program. Progress of the MS Thesis will be monitored by Comprehensive Evaluation of Research Progress (CERP) to be conducted at the end of every semester. There has to be one publication from the MS (R)Thesis for graduation. Final evaluation of MS (R) thesis will be done by at least one External Examiner.

| **Course code** | **HS 410/ HS 610** |
| **Title of the course** | **Media Studies** |
| Credit Structure | L - T - P - Credits<br>2-1-0-3 |
| Name of the Concerned Department | Humanities & Social Sciences |
| Pre-requisite, if any | NA |
| Scope of the course | The emergence and proliferation of new/digital/web-based media over the last two decades compels us to establish, investigate and reconfigure the idea of what old and new media are and if they could be understood independent of one another. In this course, we will conceptualise Media Studies, exploring their historical and theoretical provenance. We shall assess how and why media aggregate, appropriate and comment upon other media, and how ways of seeing and listening are consolidated via other media. We will try to establish a dialogue across old and new media, sound- and image-based representation in media, and media as technology vis-à-vis media as infrastructure. |
| Course Syllabus | New vs Old Media_<br>Platform Economy/Capitalism and Algorithmic Governance_<br>Immediacy and Hypermediacy in Mediation_<br>Liveness in News Television and Public Scandals_<br>Media in terms of the history of Infrastructure_<br>Media and Modernization Theory_<br>Attention Economy (Capital, Attention and Cinema in Industrial Economies)_<br>Convergence Culture (Hardware vs Software convergence_<br>Post-Cinema Perspectives on the Future of Media. |

## Course Structure for Ph.D. Program in English

**(A) Semester-I (Autumn / Spring)**

| Sr. No. | Course code | Course Title (L-T-P-Credits) | L-T-P-Credits |
|---|---|---|---|
| 1 | HS xxx | Elective-I | x-x-x-3 |
| 2 | HS xxx | Elective-II | x-x-x-3 |
| 3. | HS xxx | Elective-III | x-x-x-3 |
| 4 | HS 797 * / HS 798* | Ph.D. Seminar Course | 0-2-0-2 |

**(B) Semester-II (Spring / Autumn)**

| Sr. No. | Course code | Course Title (L-T-P-Credits) | L-T-P-Credits |
|---|---|---|---|
| 1 | HS xxx | Elective-IV | x-x-x-3 |
| 2 | HS xxx | Elective-V | x-x-x-3 |
| 3 | HS xxx | Elective-VI | x-x-x-3 |
| 4 | HS 798 * / HS 797* | Ph.D. Seminar Course | 0-2-0-2 |

**English course for the Elective-I to VI** *(in addition these courses students can take courses from the other disciplines also)*

| S. No. | Course Code | Course Title | Contact Hours (L-T-P-C) |
|---|---|---|---|
| 1. | HS 600 | Data Analysis and Technical Writing | 2-1-0-3 |
| 2. | HS 642/ HS 442 | Language and Mind | 2-1-0-3 |
| 3. | HS 643 / IHS 443 | Contemporary Short Fiction | 2-1-0-3 |
| 4. | HS 645/ HS 445 | Advanced Discourse Studies | 2-1-0-3 |
| 5. | HS 655/ HS 445 | Digital Humanities | 2-0-2-3 |
| 6. | HS 656 | Applied Linguistics | 2-0-2-3 |
| 7. | HS 741 | Black Literary Cultures and the Slave Tradition | 2-1-0-3 |
| 8. | HS 742 | Twentieth Century and the European Novel | 2-1-0-3 |
| 9. | HS 743 | Indian English Fiction | 2-1-0-3 |
| 10. | HS 744 | South Asian Diaspora Literature | 2-1-0-3 |
| 11. | HS 745 | Post-Colonial Theory and Criticism | 2-1-0-3 |
| 12. | HS 746 | Translation Studies | 2-1-0-3 |
| 13. | HS 747 | Advanced Literary Theory | 2-1-0-3 |

Note:

1. A Ph.D. student having **M.Sc./ B.Tech./ B.E. or equivalent qualification** has to do 5 to 7 Ph.D. level courses of at least 3 credits each and 1-2 Ph.D. seminar courses of at least 2 credits each. Minimum number of courses will be 5 Ph.D. level courses and one Ph.D. seminar course *(minimum coursework of 17 credits).*
2. A Ph.D. student having **M.Tech./ M.E./ M.Phil.** qualification has to do one semester coursework (with 2-3 Ph.D. level courses). Minimum number of courses will be 2 Ph.D. level courses and one Ph.D. seminar course (i.e. *(minimum coursework of 8 credits)*.

* Ph.D. Seminar course can be taken either in Autumn or in Spring Semester or both as suggested by the Faculty Advisor/Thesis Supervisor.

|---|---|
| **Course code** | **HS 642/ HS 442** |
| **Title of the course** | **Language and Mind** |
| Credit Structure | L - T - P – Credits<br>2-1-0-3 |
| Name of the Concerned Discipline | Humanities & Social Sciences |
| Pre-requisite, if any | NA |
| Scope of the course | The course aims to build interest of students in the field of language and mind. Language is considered to be the most accessible output of the working of the mind and raises some very important questions for a phenomenon unique to human beings. The course addresses some fundamental questions including how language is represented in our minds, how children acquire language so quickly and effortlessly, the connection between language and thought among others. |
| Course Syllabus | **Nature of Language:** Language as an object of scientific study, essential components of Language, Standard and non-standard languages, basic universal features in phonological, morphological and syntactic systems of language.<br>**Biological Foundations:** Is Language unique to humans? Animals learning language, Nature versus Nurture Debate for Language, Language Acquisition Device, Poverty of Stimulus, Principles and Parameters, Critical Period Hypothesis, Case Studies of Feral Children and language savants, Linguistic Relativism.<br>**Language in the Brain:** Language in the human brain, contra-lateralization, and language centres in the brain, aphasia and its types, specific language impairment, brain plasticity, fundamental differences between first and second language acquisition, sign language. |
| Suggested Books | 1. J. F. Kess, ***Psycholinguistics: Psychology, Linguistics, and the Study of Natural Language***, John Benjamins Publishing, Amsterdam, The Netherlands, 1992, 9789027235848<br>2. N. | 1. | Course Code | **HS 643/ IHS 443** |
| 2. | Title of the Course | **Contemporary Short Fiction** |
| 3. | Credit Structure | L-T- P-Credits<br>2-1-0-3 |
| 4. | Name of the Concerned Discipline/School | English/HSS |
| 5. | Pre–requisite, if any | NIL |
| 6. | Scope of the course | This course aims to familiarize students with the genre of the short story, a form of writing that has been around ever since human beings began to write the stories. Students will learn to understand the features of the short story and read selected short works written in the 20th century from different cultures across the world. Translations of stories in different languages will allow students to recognize the various modes of crafting and narrating short stories across the world. Examples of novellas or the 'long' short story will also be discussed. |
| 7. | Course Syllabus | Discussion of short stories, history of the short story, introduction to prominent short story authors from different cultures and their writings, identify and describe the different features of the genre, story and plot structure, critical writing in the genre, comparison of structure and form with other genres of literature. |
| 8. | Suggested Books | 1. D. Halpern (edited), **The Art of the Story: An International Anthology of Contemporary Short Stories**, Penguin 2000.<br>2. N. Chimamanda Ngozi and J. Lahiri (Edited), **The Global Anthology of Short Stories**, New Internationalist Publishing, May 2009.<br>(Selected 10-12 stories from both these collections)<br>**Background Readings:**<br>1. M H Abrams **Glossary of Literary terms,** Wadsworth Publishing, 2011.<br>2. Selected electronic articles that I will provide links to or copies from time to time. |

| 3. | Credit Structure | L-T-P-Credits<br>2-1-0-3 |
| 4. | Name of the Concerned Discipline | English |
| 5. | Pre–requisite, if any | NIL |
| 6. | Scope of the course | The course will make an attempt at examining the varied ways in which the notion of India has been explored by the various practitioners of Indian English fiction. Through an analysis of some of the representative Indian fiction in English and close reading of some relevant excerpts from the texts, some of the issues which may be discussed in some detail in the class are: "anxiety of Indianness", "the role of target audience in the author's depiction of India", "India as a nation state", "postcolonial India", "urban-rural divide in India", "portrayal of marginalized India on the basis of caste, class, religion, gender, region", "stereotypes and realities in depicting India", "India of Indian English Fiction versus India of Regional Language Literatures", "Indian identity", "notions of 'local', 'global', 'glocal'",etc. The list of texts mentioned are only indicative and other relevant texts could be included to explore these issues further or to bring in new perspectives. The background readings will be helpful in familiarizing the students with some of the issues at hand and their complexities. |
| 7. | Course Syllabus | Rao, Raja. *Kanthapura;* Narayan, R. K. *Malgudi Days;* Anand, Mulk Raj. *Untouchable;* Singh, Khushwant. *A Train to Pakistan;* Desani, G. V. *All About H. | | | |
|---|---|---|
| 1. | Course Code | **HS 744** |
| 2. | Title of the Course | **South Asian Diaspora Literature** |
| 3. | Credit Structure | L-T-P-Credits<br>2-1-0-3 |
| 4. | Name of the Concerned Discipline | English |
| 5. | Pre–requisite, if any | NIL |
| 6. | Scope of the course | The concept of Diaspora as a state of deterritorialization is perhaps a common theme that runs across the various implications of the term extending but not confined to ideas of exile, displacement and migration, forced or otherwise. While recognizing that there is always a hint or trace of the roots / home that defines the cultural and historical identity of the exile / migrant the course will seek to build a healthy wariness of essentializing threads of race or ethnicity that limit discussions to those that revolve around nationhood. |
| 7. | Course Syllabus | Paranjape, Makarand. *In Diaspora: Theories, Histories, Texts*. New Delhi: Indialog Publications, 2001; Bose, Neilesh, Ed. *Beyond Bollywood and Broadway: Plays from the South Asian Diaspora*. Bloomington: Indiana University Press, 2009 (selected plays); Baldwin, Shauna Singh. *We Are Not in Pakistan*. New Delhi: Rupa, 2009; Refiq, Fauzia, Ed. *Aurat Durbar: Writings by Women of South Asian Origin.* Toronto: Second Story Press, 1995; Diane McGifford, Ed. *Geography of Voice: Canadian Literature of the South Asian Diaspora*. Toronto: TSAR, 1992; Ghosh, Amitav. *The Shadow Lines*. London: BlooM.S.buy, 1988;<br>Kureishi, Hanif. *The Buddha of Suburbia*. New York: Viking, 1990; Mathur, Anurag. *The Inscrutable Americans*. Kolkata: Rupa & Co, 1991. |
| 8. | Suggested Books | 1. Mishra, Vijay. *The Literature of the Indian Diaspora: Theorizing the Diasporic Imaginary*. New York: Routledge, 2007.<br>2. Nasta, Susheila. *Home Truths: Fictions of the South Asian Diaspora in Britain*. London: Palgrave Mcmillan, 2001.<br>3. | 3. | Credit Structure | L-T-P-Credits<br>2-1-0-3 |
| 4. | Name of the Concerned Discipline | English |
| 5. | Pre–requisite, if any | NIL |
| 6. | Scope of the Course | The course will build on introductory concepts in the field of post-colonialism using them to see if a move can be made away from the advocacy of the conventional empire model. The readings of texts such as *The travels of Dean Mohammed*, *A Passage to India*, *Oroonoko*, *Mansfield Park*, *Wide Sargasso Sea*, *Heart of Darkness* and the stories of Tagore among others will strive to establish a premise for the study of postcolonial texts based on more intimate spaces such as folkways, societal ritual, language and religion, eventually helping the reader to think in terms of "imagined communities" rather than ones that are historically generated. |
| 7. | Course Syllabus | 1. Ashcroft, Bill, Gareth Griffiths, and Helen Tiffin. *The Empire Writes Back: Theory and Practice in Post-colonial Literatures.* New York: Routledge, 1989.<br>2. *The Post-Colonial Studies Reader*. New York: Routledge, 1995.<br>3. Loomba, Ania. *Colonialism/ Postcolonialism*. New York: Routledge, 1998.<br>4. Bhabha, Homi K. *The Location of Culture*. | | | |
|---|---|---|
| 1. | Course Code | **HS 747** |
| 2. | Title | **Advanced Literary Theory** |
| 3. | Credit Structure | L-T- P-Credits<br>2-1-0-3 |
| 4. | Name of the Discipline | English |
| 5. | Pre–requisite, if any | NIL |
| 6. | Scope of the course | This course aims to familiarize research students with the fundamentals of theoretical vocabulary and understand the works of important theorists in the discipline. The course uses the Norton Anthology of Theory and Criticism as the overarching text to select the particular theorists and works to be covered based on the research interests of the students of a particular semester. The other seminal texts are selected keeping in mind some of the relevant questions of criticism in the discipline. Postcolonial Studies, Politics of language, translations are some of the areas covered in depth. Faculty teaching the course can add other works relevant to the broad area of literary theory for any particular semester. This can change based on individual faculty and student research areas. The aim of the course is to discuss the role of theory in literary discourse and its importance in critically examining the contexts of literary works that may lead to new ways of reading and understanding different works. The course offers an in-depth understanding of theoretical terminology that enables students to develop a sense of the strengths and weaknesses of the well-known schools of theory. Most importantly, the course aims to train them to recognize the parameters from which the terminology emerges and develop the ability to analyze incisively and offer new ways of (re)configuring meta narratives. |
| 7. | Course Syllabus | Formalism, Reader-response theory, Rhetoric, Dialecticism, Structuralism, Post-structuralism, Post-colonialism, Translation Theories, Deconstruction, Feminist and Gender studies, Race Theory, Cultural Studies will be some of the major schools of theory covered. |

## Course Structure for Ph.D. Program in Psychology

### (A) Semester-I (Autumn / Spring)

| Sr. No. | Course code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1 | ZZ xxx | Elective-I | x-x-x-3 |
| 2 | ZZ xxx | Elective-II | x-x-x-3 |
| 3. | ZZ xxx | Elective-III | x-x-x-3 |
| 4 | HS 797 * / HS 798* | Ph.D. Seminar Course | 0-2-0-2 |

### (B) Semester-II (Spring / Autumn)

| Sr. No. | Course code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1 | ZZ xxx | Elective-IV | x-x-x-3 |
| 2 | ZZ xxx | Elective-V | x-x-x-3 |
| 3 | ZZ xxx | Elective-VI | x-x-x-3 |
| 4 | HS 798 * / HS 797* | Ph.D. Seminar Course | 0-2-0-2 |

**Psychology courses for Electives-I to VI** *(in addition to these courses, students can also take courses from other disciplines, in consultation with the thesis supervisor/faculty advisor and the concerned course coordinator.)*

| S.No. | Course Code | Course Title | Contact Hours (L-T-P-C) |
|---|---|---|---|
| 1. | HS 600 | Data Analysis and Technical Writing | 2-1-0-3 |
| 2. | HS 671 | Human Factors and Higher Cognitive Processes | 2-0-2-3 |

Note:

1. A Ph.D. student having **M.Sc./ B.Tech./ BE or equivalent qualification** has to do 5 to 7 Ph.D. level courses of at least 3 credits each and 1-2 Ph.D. seminar courses of at least 2 credits each. Minimum number of courses will be 5 Ph.D. level courses and one Ph.D. seminar course *(minimum coursework of 17 credits).*
2. A Ph.D. student having **M.Tech./ME//MPhil** qualification has to do one semester coursework (with 2-3 Ph.D. level courses). Minimum number of courses will be 2 Ph.D. level courses and one Ph.D. seminar course (i.e. *(minimum coursework of 8 credits)*.

* Ph.D. Seminar course can be taken either in Autumn or in Spring Semester or both as suggested by the Faculty Advisor/Thesis Supervisor.

| | | |
|---|---|---|
| 1. | Course Code | **HS 671** |
| 2 | Title of the Course | **Human Factors and Higher Cognitive Processes** |
| 3. | Credit Structure | L-T-P-Credit<br>2-0-2-3 |
| 4. | Name of the Concerned Discipline/ School | Psychology/Humanities & Social Sciences |
| 5. | Pre-requisite, if any (for the students) | Basic Understanding of Psychology |
| 6. | Course Objective | The aim of the course is to familiarise students with a wide range of theories and research investigating human factors. As an advanced course, the course normally covers all the areas specified in the syllabus, but students wishing to concentrate especially on particular topic areas may do so by agreement with the instructor as a part of project/practicum portion. The course has been developed to be as interesting and challenging as possible. The following are the objectives of the course:<br>1. To develop understanding of the breadth of different approaches to human factors practices.<br>2. To gain awareness of the principles and perspectives of human factors through the study of theories, concepts, and research.<br>3. To develop the ability to apply human factors research to real-world issues.<br>4. To understand how to critically appraise concepts, theories, and empirical evidence.<br>5. To be familiar with a range of research methods. |
| 7. | Course Syllabus | **Understanding Human Factors:** Introduction and Background to Human Factors, Defining Design, System Thinking, and Sociotechnical System.<br>**Human System Interaction: Affective and Cognitive Processes in System Development, Design, and Evaluation:** User & Interactive Systems, User Cognition, Emotion, HCI, Complex Systems, Human Error, Human Performance, Human Centered Engineering, Usability & Human-Centered Systems Design.<br>**Cognitive Ergonomics:** Visual Cognition & Attention, Eye Movement, Visual Perception, and Computer Vision Syndrome.<br>**Ergonomics Standards:** Displays, The EC directives, Technical standards.<br>**Strategic Practices:** Social & Cultural Contexts, Design thinking, Business Design, Social Innovation, Democratic<br>Design, Transformation.<br>**Research Practitioner:** |

| | | |
|---|---|---|
| | | • Research Methods, Usability Evaluation, Reporting, Recent Developments.<br>• Professional Issues: ISE, HFES; EACE, FEES, IEA, EAEFS, SEAES, SEANES, BCPE; Accreditation; Training & Employment. |

|---|---|
| **Course Code** | **HS 680** |
| **Title of the Course** | **Sociology of Religion** |
| Credit Structure | L-T-P-Credit<br>2-1-0-3 |
| Name of the Concerned Department | Humanities & Social Sciences |
| Pre-requisite, if any | None |
| Course Objective | This course on religion equips students with essential theoretical and empirical insights to understand religion comprehensively from diverse sociological viewpoints. It attempts to examine religion scientifically in the light of prominent and compelling scholarly works in the field of sociology of religion. Given the standard and focus of this course, it is primarily meant for Post Graduate students, preferably Ph.D. students, in the school of humanities and social sciences. |
| Course Syllabus | **Society and Religion: Theoretical Foundations**<br>The evolution of the sociology of religion, Sacred & Profane, Totemism, Protestantic Ethic and the Spirit of Capitalism, Religion and Ideology, Religion and rationality, The Sacred Canopy, Elementary Forms of Religious Life.<br>1. Religion as Social Action (Max Weber), Political Economy of Religion (Karl Marx), Sociology of Religious Experience (Emile Durkheim), Religion as Cultural System (Clifford Geertz), Holy terrors – thinking about religion after 9/11.<br>**The Secularization Debate:**<br>Sacred and Secular: Religions and Politics, Secularization Theory, Public Religions in the Modern World, Religion and Comparative Politics, Politics of Religion, Secularization as declining religious authority, Secularization, R.I.P.<br>**Religious Particulars Vs Universals Debate**:<br>Construction of religion as Anthropological category, Anthropological conceptions of religion, Genealogies of religion: Discipline and reasons of power in world religions, The culture of disbelief.<br>**Religion, Fundamentalism & Violence**:<br>Clash of civilizations, Global rise of religious violence, Fundamentalist language and politics, Three model of religious violence, Taming the Gods in Democracy. |

| **Course code** | **HS 682** |
| **Title of the course** | **Medical Humanities: Texts and Contexts** |
| Course Category | Institute Elective |
| Credit Structure | L - T - P - Credits<br>3-0-0-3 |
| Name of the Concerned Department | School of Humanities and Social Sciences |
| Pre-requisite, if any | Nil |
| Scope of the course (Objectives) | This course understands Medical Humanities as humanistic inquiry and expression at the intersection of medicine and culture. This interdisciplinary field not only includes the work of physicians and surgeons, health practitioners, nurses, but also of social workers, health advocates, sanitary reformers, and literary critics who analyse poems and novels. |
| Course Outcomes | 1. Understand that concepts such as **disease, illness, and health** in the history of medicine have both biological and cultural determinants.<br>2. Medical Humanities works at the intersection of different discourses from the biological to the social, economic, political, and aesthetic, that influence health and shape our perceptions of physical and psychological wellbeing. Students will be expected to reflect on illness, health, and medicine. |
| Course Content | **1. Introduce students to the field of Medical Humanities** as a broad umbrella under which to study the influence of medico-scientific ideas and practices on society.<br>**2. Examine anatomical and medical illustration of bodies** (from Vesalius to Gunter von Hagens), definitions of mental illness (from hysteria to environmental illness), response to old and new plagues, and approaches to pain, dying, and caregiving.<br>**3. Read literary and visual texts** to see the cultural, ecological, environmental, occupational, and behavioural patterns that determine our ideas of disease and mental health. |
| Suggested Books | **Textbooks:**<br>**1. Fictions of Immortality:** Shelley, Mary. *Frankenstein; or The Modern Prometheus* (1818) UK: Penguin Classics. ISBN 10- 0141439475<br>**2. | The scope of the course | This course is a systematic exploration of approaches to research in history and how the discipline has been influenced by other subjects in the humanities and social sciences.<br>1. How is research in history done?<br>2. How is the historian's construction of the past any different from the public perception of a historical event?<br>3. Is interdisciplinarity in history possible?<br>4. What is the relationship between history, the humanities, and social sciences? |
| Course Syllabus | 1. **What is History**<br>2. **Kinds of History** (global, cultural, social, economic, military, history of art)<br>3. **Historical Knowledge** (standards, quality, reliability, frameworks)<br>4. **Historical Theory** (historical truth, power, limits of objectivity, the challenge of postmodernism)<br>5. **Sources** (written texts, paintings, epigraphy, numismatics)<br>6. **Public History** (the ownership of the past, moral judgements and multiple audiences)<br>7. **Periodisation** (Historical time, dividing the past, events and descriptions)<br>8. **History and other disciplines** (Sociology, Philosophy, Anthropology and Literature) |

# PG and Ph.D. Program in
# Computer Science and Engineering
# and Syllabi of Courses

## Course Structure of M.S. (Research) Program in Computer Science and Engineering with an option to convert to M.S. (Research) + Ph.D. dual degree program (From AY 2018-19)

**Minimum Educational Qualification:** Four-year Bachelor's degree or five-year integrated degree (with first division as defined by the awarding Institute/ University for Indian applicants and equivalent to International applicants, as assessed by the Institute) in Computer Science and Engineering or Information Technology. *Relaxation of 5% in qualifying degree is applicable for SC and ST category applicants.*

**Qualifying Examination:**
**(a) International Students:** Valid score of TOEFL or IELTS and valid score of GRE.
**(b) Indian Students:** Valid GATE qualification in Computer Science and Information Technology (CS).

**Categories of Admission:**
**(a) International Students:** (i) International self-financed **(ISF)** students; (ii) International students sponsored by non-government organizations or by a reputed industry **(ISW)**; (iii) International students sponsored by foreign government or its organizations or through mutual collaborative programs of India with other countries **(GSW)**
**(b) Indian Students:** Teaching Assistantship **(TA)**; (ii) Highly motivated sponsored candidate **(SW)** on full-time basis from highly reputed R & D organizations such as DRDO, ISRO, BHEL, C-DAC, ADE, ADA, etc. and highly reputed Industries; (iii) Defense Forces **(DF)**: Candidates sponsored by the Defense Forces; (iv) Regular institute staff **(IS)** of IIT Indore on part-time basis only.
***Candidates of SW, DF and IS categories will not be provided any scholarship.***

**Duration of Program:** 2 years on full-time basis with maximum extension of one semester.

**Evaluation of Research Work and Thesis:** Students are expected to identify their Thesis Supervisor(s) within one month of joining the program so that PG Student Progress Committee (PSPC) can be formed and student can start research work from beginning of the program. Progress of the M.S. thesis will be monitored by PSPC through CERP to be conducted at the end of every semester with preferably Mid Semester evaluation also. Final evaluation of M.S. thesis will be done by at-least one External Examiner. Student must have one journal publication in SCI index from his/ her M.S. thesis for completion of the degree. Final evaluation of MS thesis will be done by at-least one Professor or equivalent level External Examiner from outside the Institute but within India. Student must have one journal publication in SCI index from his/ her MS thesis for completion of the degree.

**1st Year: Semester-I**

| Course code | Course Name | Contact hours (L-T-P) | Credits |
|---|---|---|---|
| CS 611/ CS 411 | Advanced Algorithms | 2-0-2 | 3 |
| CS XXX | Elective-I | X-X-X | 3 |
| ZZ XXX | Elective-II | X-X-X | 3 |
| CS 697 | PG Seminar course | 0-2-0 | 2 |
| CS 791 | M.S. Thesis (Stage-1) | 0-0-14 | 7 |
| **Total minimum credits earned during the semester** | | | 18 |
| **Additional course (as per the requirement basis)** | | | |
| HS 641 | English Communication Skills | 2-0-2 | Non-credit course (with PP/NP grade) |

**1st Year: Semester-II**

| Course code | Course Name (L-T-P-Credits) | Contact hours (L-T-P) | Credits |
|---|---|---|---|
| CS 792 | M.S. Thesis (Stage-2) | 0-0-36 | 18 |

### 2nd Year: Semester-III

| Course Code | Course Title | Contact hours (L-T-P) | Credits |
|---|---|---|---|
| CS 793 | M.S. Thesis (Stage-3) | 0-0-36 | 18 |

### 2nd Year: Semester-IV

| Course Code | Course Title | Contact hours (L-T-P) | Credits |
|---|---|---|---|
| CS 794 | M.S. Thesis (Stage-4) | 0-0-36 | 18 |
| **Total minimum credits to be earned during the program** | | | **72** |

### CSE courses for Electives- I and II @

| S. No. | Course Code | Course Title | Contact hours (L-T-P-C) |
|---|---|---|---|
| 1. | CS 603 | Machine Learning | 2-0-2-3 |
| 2. | CS 606/ CS 406 | Data Mining and Data Warehousing | 2-0-2-3 |
| 3. | CS 609/ CS 409 | Advanced Topics in Database Management Systems | 2-1-0-3 |
| 4. | CS 612/ CS 412 | Pattern Recognition | 2-0-2-3 |
| 5. | CS 614/ CS 414 | Cloud Computing and Applications | 2-1-0-3 |
| 6. | CS 616/ CS 416 | Service Oriented Systems | 2-1-0-3 |
| 7. | CS 617/ CS 417 | Cryptography and Network Security | 2-0-2-3 |
| 8. | CS 618/ CS 418 | Systems and Usable Security | 2-1-0-3 |
| 9. | CS 619/ CS 419/ ICS 419 | Computer Vision | 2-1-0-3 |
| 10. | CS 620/ CS 420 | Embedded Systems | 2-1-0-3 |
| 11. | CS 622/ CS 422 | Numerical Simulation | 2-1-0-3 |
| 12. | CS 630/ CS 430 | Data Center Networking | 2-1-0-3 |
| 13. | CS 632/ CS 432 | Reinforcement Learning | 2-0-2-3 |
| 14. | CS 334/ CS 434/ CS 634 | Wireless Networks and Applications | 2-1-0-3 |
| 15. | CS 701 | Selected Topics in Advanced Algorithms | 2-1-0-3 |

@ In addition to this course list, a student can also opt from the PG courses being offered by the other disciplines.

**Regarding Conversion to M.S. (Research) and Ph.D. dual degree program**

1. Request for conversion from M.S. (Research) to M.S. (Research)+Ph.D. dual degree will be considered after evaluating the research potential of the promising and motivated M.S. (Research) students at the end of the **third semester of their program.**

2**.** If the student opts for the Dual Degree Program but cannot complete the requirements of a Ph.D., an **exit option** with the M.S. (Research) Degree can be earned at the end of the final semester of the normal M.S. Program by getting the M.S. (Research) Thesis will be examined in the standard manner as per the requirements for the award of an M.S. (Research) degree.

**3.** The enhancement in the scholarship from M.S. (Research) to Ph.D. will be from the beginning of the fifth semester or from the date on which all requirements for the award of M.S. (Research) degree are fulfilled, whichever is later**.**

**Course Structure of M.Tech. Degree Program in Computer Science and Engineering with an option to convert to M.Tech. + Ph.D. dual degree program (from AY 2023-24)**

**Minimum Educational Qualification:** Four-year Bachelors degree in Computer Science and Engineering, Information Technology, Electronics and Communication Engineering or Electronics Engineering or Electrical Engineering (with first division/ first class/ as defined by the awarding Institute/ University or Equivalent grade for Indian applicants and equivalent to International applicants, as assessed by the Institute). Relaxation of 5% in qualifying degree is applicable for SC, ST and PwD category applicants.

**Qualifying Examination:**
**(a) Indian Students:** Valid GATE qualification in CS.
**(b) International Students:** Valid score of GRE /TOEFL/IELTS or equivalent.

**Categories of Admission:**
**(a) Indian Students:** Teaching Assistantship **(TA)**; (ii) Highly motivated sponsored candidate **(SW)** on full-time basis from highly reputed R & D organizations such as DRDO, ISRO, BHEL, C-DAC, ADE, ADA, etc. and highly reputed Industries; (iii) Defense Forces **(DF)**: Candidates sponsored by the Defense Forces; (iv) Regular institute staff **(IS)** of IIT Indore on part-time basis only.
***Candidates of SW, DF and IS categories will not be provided any scholarship.***
**(b) International Students:** (i) International self-financed **(ISF)** students; (ii) International students sponsored by non-government organizations or by a reputed industry **(ISW)**; (iii) International students sponsored by foreign government or its organizations or through mutual collaborative programs of India with other countries **(GSW)**

**Duration of Program:** 2 years on full-time basis.
**Number of intakes:** 15

**Course Structure of 2-Year Full Time M. Tech. Program**

**1st Year: Semester-I**

| Course Code | Course Title | Contact hours (L-T-P) | Credit |
|---|---|---|---|
| CS 636 | Mathematics-I: Linear Algebra and Probability | 2-1-0 | 3 |
| CS 639 | Computing Foundations: Operating Systems | 1-0-2 | 2 |
| CS 641 | Computing Foundations: Compiler Design | 1-0-1 | 1.5 |
| CS 643 | Computing Foundations: Computer Architecture | 1-0-1 | 1.5 |
| CS 411/ CS 611 | Advanced Algorithms | 2-1-0 | 3 |
| ZZ XXX | Elective-1 | X-X-X | 3 |
| CS 653 | Programming Lab | 1-0-4 | 3 |
| | | **Total minimum credits earned during the semester** | **17** |
| **Additional course (as per the requirement basis)** | | | |
| HS 641 | English Communication Skills | 2-0-2 | PP/NP |

**1st Year: Semester-II**

| Course Code | Course Title | | Contact hours (L-T-P) | Credit |
|---|---|---|---|---|
| CS 637 | Mathematics-II: Theory of Computation and Graph Theory | | 2-1-0 | 3 |

| CS 800 | M. Tech. Research Project (Stage-II) | 0-0-36 | 18 |
| **Total minimum credits to be earned during the semester** | | | **18** |
| **Total minimum credits to be earned during the program** | | | **70** |

@ In addition to this course list, a student can also opt from the PG courses being offered by the other disciplines.

**NOTE:** 1. Request for conversion from M.Tech. to M.Tech. + Ph.D. dual degree will be considered after evaluating the research potential of the promising and motivated PG students at the end of the **third semester of their program.**

**2.** If a student opts for the Dual Degree Program but cannot complete the requirements of a Ph.D., an **exit option** with the M.Tech. degree can be earned at the end of the final semester of the normal M.Tech. Program by getting the M.Tech. Research Project examined in the standard manner as per the requirements for the award of an M.Tech. degree.

3. The enhancement in the scholarship will be from the beginning of the fifth semester or from the date on which all requirements for the award of M.Tech. degree are fulfilled, whichever is later**.**

**Course Structure for Ph.D. Program in Computer Science and Engineering**
**(from AY 2010-11 to AY 2012-13)**

**(A) Semester-I (autumn / spring)**

| Sr. No. | Course code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1 | CS 701 | Selected Topics in Advanced Algorithms | 2-1-0--3 |
| 2 | ZZ xxx | Elective-I | x-x-x-3 |
| 3 | ZZ xxx | Elective-II + | x-x-x-3 |
| 4 | CS 797* / CS 798* | Ph.D. Seminar Course | 0-2-0-2 |

**(B) Semester-II (spring / autumn)**

| Sr. No. | Course code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1 | ZZ xxx | Elective - III + | x-x-x-3 |
| 2 | ZZ xxx | Elective - IV + | x-x-x-3 |
| 3 | CS 798* / CS 797* | Ph.D. Seminar Course | 0-2-0-2 |

**Computer Science & Engineering courses for Elective**

| S.No. | Course Code | Course Title | Contact Hours (L-T-P-C) |
|---|---|---|---|
| 1 | CS 606 / CS 406 | Data Mining and Data Warehousing | 2-0-2-3 |
| 2 | CS 609 / CS 409 | Advanced Topics in Database Management Systems | 2-1-0-3 |
| 3 | CS 614 / CS 414 | Cloud Computing and Applications | 2-1-0-3 |
| 4 | CS 616 / CS 416 | Service Oriented Systems | 2-1-0-3 |
| 5 | CS 617 / CS 417 | Cryptography and Network Security | 2-1-0-3 |
| 6 | CS 618 / CS 418 | Systems and Usable Security | 2-1-0-3 |
| 7 | CS 619 / CS 419 | Computer Vision | 2-1-0-3 |

For rest elective courses, the student should choose any PG-level course from other disciplines/schools in consultation with the thesis supervisor/faculty advisor and the concerned course coordinator.

Note:
+ Additional elective course is to be taken by the students with B.Tech./BE/M.Sc. qualification only.
* Depending upon the semester of admission (CS 797 for Autumn Semester and CS 798 for the Spring Semester).
Core courses are compulsory.

## Course Structure for Ph.D. Program in Computer Science and Engineering
## (w.e.f. AY 2013-14)

### (A) Semester-I (autumn / spring)

| Sr. No. | Course code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1 | ZZ xxx | Elective-I | x-x-x-3 |
| 2 | ZZ xxx | Elective-II | x-x-x-3 |
| 3 | ZZ xxx | Elective-III | x-x-x-3 |
| 4 | CS 797* / CS 798* | Ph.D. Seminar Course | 0-2-0-2 |

### (B) Semester-II (spring / autumn)

| Sr. No. | Course code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1 | ZZ xxx | Elective – IV | x-x-x-3 |
| 2 | ZZ xxx | Elective - V | x-x-x-3 |
| 3 | ZZ xxx | Elective - VI | x-x-x-3 |
| 4 | CS 798* / CS 797* | Ph.D. Seminar Course | 0-2-0-2 |

**NOTE**

1. A Ph.D. student having **M.Tech./ M.E./ M.Phil.** qualification has to do one semester coursework (with 2-3 Ph.D. level courses). Minimum number of courses will be 2 Ph.D. level courses and one Ph.D. seminar course i.e. *(minimum coursework of 8 credits)*.
2. A Ph.D. student having **B.Tech./ B.E./ M.Sc. or equivalent qualification** admitted to Ph.D. Program in an **Engineering discipline** shall do 6-8 courses of at least 3 credits each and 1-2 Ph.D. Seminar courses of at least 2 credits each. Minimum number of courses will be 6 Ph.D. level courses and one Ph.D. seminar course *(minimum coursework of 20 credits).*

* Ph.D. Seminar course can be taken either in Autumn or in Spring Semester or both as suggested by the Faculty Advisor/Thesis Supervisor.

**CSE courses for Electives-I to VI** *(in addition to these courses students can also take courses from other disciplines)*

| S. No. | Course Code | Course Title | Contact Hours (L-T-P-C) |

| 19. | CS 635/ CS 435 | Deep Learning | 2-0-2-3 |
| 20. | CS 701 | Selected Topics in Advanced Algorithms | 2-1-0-3 |

| | | |
|---|---|---|
| 1. | Course Code | **CS 601 / CS 401** [from AY 2014-15 onwards] |
| 2. | Title of the Course | **Soft Computing** |
| 3. | Credit Structure | L-T-P-Credits<br>2-0-2-3 |
| 4. | Name of the Concerned Discipline/Discipline | Computer Science and Engineering |
| 5. | Pre–requisite, if any | Discrete Mathematical Structures, Design and Analysis of Of Algorithms, Computational Intelligence |
| 6. | Scope of the Course | After having basic knowledge of artificial intelligence related to neural, fuzzy and evolutionary approaches, advancements in different areas are to be covered with working in a specific domain. This is by taking a case study to come up with the implementation and results. |
| 7. | Course Syllabus | **Review on Mathematical and theoretical methods on soft computing**: neural networks. RBF structures. Self- organizing networks and methods. Fuzzy logic. Support vector machines and kernel methods. Evolutionary algorithms.<br>**Hybrid Intelligent Systems:** Neuro-fuzzy Systems. Neuro-Genetic systems, Evolving neural systems. Neuro-swarm. Hybridization with novel computing paradigM.S.: Quantum computing, DNA computing, membrane computing. Neural dynamic logic and other methods, etc.<br>**Learning and adaptation for novel:** Adaptive systems. Imitation learning. Reconfigurable systems. Supervised, unsupervised, Semi-supervised, reinforcement and statistical of Algorithms. Stability and convergence analysis.<br>**Applications:** Image and signal processing. Ambient intelligence. process control, and manufacturing. Biometry and bioinformatics. Data mining. Internet modeling, communication and networking. Intelligent systems in education. Human–robot interaction. Time series analysis and prediction etc. |
| 8. | Suggested Books | **Book:**<br>1. Jang, Roger and Mizutani, "Neuro-Fuzzy and Softcomputing: A Computational Approach to learning and Machine Intelligence", Pearson.<br>2. R. John and Ralph Birkenhead, SoftComputing Techniques and Applications (Advances in Intelligent and Softcomputing), 2000, Springer-Verlag.<br>3. F.O. Karray, C. W. De Silva, SoftComputing and Intelligent System Design: Theory, Tools and Applications, Addison Wesley; 1st Ed. 2004.<br>**Other References:**<br>1. IEEE Transactions on Fuzzy Systems<br>2. ACM Transactions on Knowledge Discovery from Data (TKDD)<br>3. The journal of pattern recognition society, ELSEVIER<br>4. The journal of Neurocomputing, ELSEVIER<br>5. IEEE Transactions on Evolutionary Computation<br>6. IEEE Transactions on Neural Networks Learning Of Algorithms<br>7. Other web resources will be posted on the course website from time to time. |

| | |
|---|---|
| **Course code** | **CS 603/ CS 403** |
| **Title of the course** | **Machine Learning** |
| Credit Structure | L - T - P - Credits<br>2-0-2-3 |
| Name of the Concerned Discipline | Computer Science & Engineering |
| Pre-requisite, if any | Artificial Intelligence/Computational Intelligence |
| Scope of the course | This course provides a broad introduction to machine learning, datamining, and statistical pattern recognition. Topics include: (i) Supervised learning (parametric/non-parametric algorithms, support vector machines, kernels, neural networks). (ii) Unsupervised learning (clustering, dimensionality reduction, recommender systems, deep learning). (iii) Best practices in machine learning (bias/variance theory_ innovation process in machine learning and AI). The course will also draw from numerous case studies and applications, so that candidate's also learn how to apply learning algorithms to build different intelligent systems. |
| Course Syllabus | Introduction, Machine Learning and AI, Motivations for Studying ML, Supervised and Unsupervised learning, Linear prediction, Maximum likelihood Regularizers, basis functions and cross-validation, Optimisation, Linear and Logistic Regression, Gaussian Discriminant Analysis, Support Vector Machines, Decision Trees, Neural networks architectures and its advances, Ensemble Methods, Clustering, Naive Bayes, Bayesian Statistics, K-Means, Gaussian Mixture Models, Learning Theory, Model Selection. |
| Suggested Books | 1. C. M. Bishop, ***Pattern Recognition and Machine Learning,*** Springer, Heidelberg, 2006, 978-0-387-31073-2<br><br>2. T. Mitchell, ***Machine Learning***, McGraw Hill, 1997 (new chapters on line, 2006), New York, 1997, 978—0071154673<br><br>3. Duda, Hart and Stork, ***Pattern Classification*** *(2nd ed.),* Wiley Interscience, US, 2000, 978-8126511167 |

|---|---|
| Course Code | **CS 614/ CS 414** |
| Title of the Course | **Cloud Computing and Applications** |
| Credit Structure | L-T-P-Credits<br>2-1-0-3 |
| Name of the Concerned Discipline | Computer Science & Engineering |
| Pre-Requisite, if any | UG level courses on Operating Systems, Computer Architecture and Computer Networks |
| Scope of the Course | To study the technology behind the cloud computing methodology. The course would include many cloud computing service models namely *IaaS*, *SaaS*, and *PaaS* and cloud computing deployment models such as public Cloud, private Cloud and hybrid Cloud. Further, with the exponential growth in Cloud computing services, there is a need to understand the various issues that affect the different stakeholders of Cloud computing. The success story of the cloud computing not only depends on the underlying technology but also on the economics of the Cloud computing resource market. Hence, in this course, we would also cover the concept of Service Level Agreement (SLA), SLA matching techniques, cloud resources management, resource provisioning and sharing, pricing strategies, monitoring risk, trust, and Quality of Service (QoS) etc. |
| Course Syllabus | **History of Cloud Computing:** ParadigM.S. in Computing, Parallel Computing, Distributed Computing, Grid Computing, Service Computing; Service Oriented Architecture (SOA), Web Services<br>**Cloud Computing:** Definition, Characteristics, Architecture, Components, Service Models, Deployment Models, Virtualization: Server, Storage, Network, Desktop; Hypervisor, Virtual Machine, Multi-tenancy, Opportunities and Risks<br>**Service Level Agreement (SLA):** Definition, Types of SLA, SLA Life Cycle, Issues Related to Cloud SLA, SLA Frameworks: WS-Agreement, WSLA, WSOL, Slang, Bilateral Protocol; Translation of SLAs into Monitoring Specifications, Dynamic Creation of Monitoring Infrastructures, Penalty Management, Runtime Prediction<br>**Cloud Security:** Cloud Security Fundamentals, Vulnerability Assessment, Security and Privacy in Cloud, Cloud Computing Security Architecture: Identity Management and Access Control, Autonomic Security; VM Specific Security Techniques<br>**Cloud Application Programming Models:** Cloud File Systems: GFS and HDFS, BigTable, Hbase and Dynamo; Map Reduce Programming Model, Hadoop: Hadoop Fundamentals, Hama and other Hadoop Related Services<br>**Cloud Application Development PlatforM.S.:** Xen Hypervisor, Amazon Web Service, Windows Azure, Google App Engine, Eucalyptus, Open Stack, Open Nebula |
| Suggested Books | 1. A. T. Velte, **Cloud Computing - A Practical Approach**, McGraw Hills<br>2. P. Wieder and J.M. Butler, **Service Level Agreements for Cloud Computing**, Springer<br>3. C. Buan, **Cloud Computing - Web Based Dynamic IT Services**, Springer<br>4. Tanenbaum and V. Steen, **Distributed Systems: Principles and ParadigM.S.**, Pearson<br>5. David E.Y. Sarna, **Implementing and Developing Cloud Computing Applications**, CRC Press<br>6. R. Krutz and R. D. Vines, **Cloud Security**, Wiley-India<br>7. T. |---|---|
| Course Code | **CS 617 / CS 417** |
| Title of the Course | **Cryptography and Network Security** |
| Credit Structure | L-T-P-Credits<br>2-1-0-3 |
| Name of the Concerned Discipline/Discipline | Computer Science and Engineering |
| Pre–requisite, if any | Discrete Mathematical Structures, Design and Analysis of Algorithms, Computer Networks |
| Scope of the Course | To understand the basic concepts of cryptography, get familiarized with encryption and authentication protocols and look at system level security. We will study block ciphers, stream ciphers, hash functions and public key cryptography and security mechanisM.S. in networks and Internet. In the process we will learn some number theory and algebra. |
| Course Syllabus | **Introduction:** What is cryptography, classical ciphers, cryptanalysis.<br>**Shannon's theory:** Concept of perfect secrecy, entropy<br>**Symmetric-key Cryptography:** Pseudorandomness, Stream ciphers, Block ciphers, Data Encryption Standards, Advanced Encryption Standards, Modes of operation<br>**Hash-functions:** Data Integrity, Merkle-Damgard construction, Message Authentication Codes<br>**Number Theory:** Euclidean Algorithm, Chinese Remainder Theorem, Primality Testing algorithms, Factoring algorithms<br>**Public-key Cryptography:** RSA, Discrete log problem, Diffie-Hellman key exchange protocol, Signatures schemes Public key Infrastructure, Digital certificates<br>**Network Security:** Network security at application, Security issues in electronic mail, IP Security, Web security, transport layer security and Secure Socket Layer, intrusion detection, malicious software, viruses, worM.S. and related threats, firewalls, trusted systems. |
| Suggested Books | **Suggested Textbook:**<br>1. D. R. Stinson: **Cryptography theory and practices**, 3rd Edition, CRC Press, (2006)<br>2. W. Stalling: **Cryptography and Network security Principles and Practices**, 4th or 5th Edition PHI, 2006/2010<br>**Other References:**<br>1. A. Menezes, P. Oorschot, S. | | |
|---|---|
| Course Code | **CS 620/ CS 420** |
| Title of the Course | **Embedded Systems** |
| Credit Structure | L-T- P-Credits<br>2-1-0-3 |
| Name of the Concerned Discipline | Computer Science and Engineering |
| Pre–requisite, if any | Programming knowledge, Computer Architecture, Operating Systems.<br>CSE students take these subjects in their I, II and III years. |
| Scope of the course | Embedded systems are becoming more and more ubiquitous and pervasive in our day to day life. Their applications range from domestic household appliances, health-care, defense, transportation, space technology, gaming, infotainment, mobiles, energy generation, etc.<br>Research reports1 reveal that 99% of the microprocessors/software produced annually end up in embedded systems/applications. The course will focus on software issues in embedded systems. It will include demonstrations and getting acquainted with 8/16/32-bit micro-controller and its development environment (starter kits, appropriate compilers and flashers), interrupt programming, resource management, and peripheral interfacing & drivers. The practical part will involve demos and getting started kind of exercises to show the tangible side of taught concepts. |
| Course Syllabus | 1. Introduction to embedded systems: Embedded vs. General purpose computer Systems; Abstract Model; computer-plant interaction and real-time reactive behaviour of embedded control systems.<br>2. Sequential and continuous control systems;<br>3. Basic modeling and implementation techniques for sequential and continuous control systems - state machines, function blocks and function block diagraM.S., which is followed by advanced modelling techniques for complex systems, such as hierarchical and concurrent state machines and hybrid models;<br>4. Real-time operating systems (RTOS), Real-time kernels, Deploying applications on RTOS/Kernels. |
| Suggested Books | 1. David E. Simon, **Embedded Systems Primer**, Addison-Wesley, 1999, 020161569X / 9780201615692.<br>2. |---|---|
| **Title of the Course** | **Natural Language Processing** |
| Credit Structure | L - T - P - Credits<br>2-0-2-3 |
| Name of the Concerned Department | Computer Science & Engineering |
| Pre-requisite, if any | NA |
| Scope of the Course | The course is an introductory course in the natural language processing field. This is meant to get students familiar with the text processing techniques as well as more advanced techniques for text processing such as question answering, text summarization, parsing, semantic role labelling, etc. |
| Course Syllabus | Introduction NLP tasks in syntax, semantics, and pragmatics. Applications such as information extraction, question answering, and machine translation. The problem of ambiguity. The role of machine learning. Brief history of the field. N-gram Language Models The role of language models. Simple N-gram models. Estimating parameters and smoothing. Evaluating language models. Part Of Speech Tagging and Sequence Labeling Lexical syntax. Hidden Markov Models (Forward and Viterbi algorithms and EM training). Basic Neural Networks Any basic introduction to perceptron and backpropagation LSTM Recurrent Neural Networks "Understanding LSTM Networks" optionally the<br>original paper Long Short Term Memory. Syntactic parsing Grammar formalisms and treebanks. Efficient parsing for context-free grammars (CFGs). Statistical parsing and probabilistic CFGs (PCFGs). Lexicalized PCFGs. Neural shift-reduce dependency parsing Semantic Analysis Lexical semantics and word-sense disambiguation. Compositional semantics. Semantic Role Labeling and Semantic Parsing. Information Extraction (IE) Named entity recognition and relation extraction. IE using sequence labeling. Machine Translation (MT) Basic issues in MT. Statistical translation, word alignment, phrase-based translation, and synchronous grammars. |

|---|---|
| **Course code** | **CS 426 / CS 626** |
| **Title of the course** | **Foundations of Cyber-Physical Systems** |
| Credit Structure | L - T - P - Credits<br>2-1-0-3 |
| Name of the Concerned Department | Computer Science and Engineering |
| Pre-requisite, if any | Suitable for UG final/ Grad/ PhD students who studied courses of Discrete Mathematics, Automata Theory, Programming, Operating Systems |
| Scope of the course | This course aims to introduce the basics of Cyber Physical Systems, distinguishing characteristics that sets them apart from their other embedded system incarnations. The essential topics covered would be: Pnueli's Cactus model, real-time Vs. hybrid Vs. reactive systems, formal methods for rigorous analysis of CPS, concurrency, distributed algos (centralised as well as decentralised variants), Disentanglement of their complex nuances with decentralisation. The emphasis would be from systems specification, design and formal analysis perspectives. |
| Course Syllabus | 1. Dynamical systems: Continuous Vs Discrete behaviour, Hybrid behaviour, Reactive Systems, CPS key features, Synchronous Vs. Asynchronous paradigms.<br>2. Control routine patterns: Different control cycle actuations, Event/ Time - triggered, Static cyclic scheduling.<br>3. Scheduling: Realtime Scheduling policies, Rate-monotonic, Deadline-monotonic, Utilisation-based Schedulability.<br>4. Kernels: Real-time kernels and Kernel-based system development.<br>5. Specification languages: State machines (deterministic, nondeterministic), structural vs behavioural specification<br>6. Correctness Analysis: Requirements specification via Live, Safe and Precedence properties, Timed Processes & Protocols, Timed Automata, Hybrid Automata (Linear vs Non-linear), Mechanised Proof techniques, Deductive verification, 7. CPS Designs: From various application domains and CPS Case Studies. |

|---|---|
| Course code | **CS 627/ CS 427** |
| Title of the course | Advanced Computer Networks |
| Credit Structure | L-T-P–Credits 2-1-0-3 |
| Name of the Concerned Discipline | Computer Science and Engineering |
| Pre-requisite if any | Computer Networks (UG Level Course)<br>Operating Systems (UG Level Course) |
| Scope of the Course | This course will give a background on design principles of highperformance networking devices like switches and routers. It will introduce advanced topics and recent trends in Computer Networks like Software Defined Networking, Data Center Networks, Information Centric Networking and Future Internet. The Learning outcomes are:<br>1. Introduce PG/UG students to the recent advances and state-of-theart Computer Networking topics (Architecture/Protocol/Systems), and also develop understandings on the future research aspects in networking to help guide the students towards potential MTech/MS/PhD work.<br>2. Provide insights on the principles and design decisions behind networking aspects, Internet technologies and future research.<br>3. Expose students to hands-on exercises, work on network simulators and help them design and implement the networking protocols and applications. |
| Course Syllabus | High Performance Switching and Routing:<br>1. IP Address Lookup- Trie-based Algorithms, Hardware Lookup.<br>2. Quality of Service: Need for Packet Classification, Different Classification Methods, TCAM based Classification, Differentiated Service, Traffic Polishing, Traffic Shaping, Packet Scheduling, Queue Management Techniques.<br>3. Packet Switching: Switching Overview, Switching Fabric, Buffering in Switch Fabric, Multiplane and Multistage Switching Network Softwarization:<br>1. Software Defined Networking (SDN): Control and Data Plane Separation. Network Operating System (SDN Controllers), Intent based Networking (IBN), Southbound Interface (OpenFlow) and OpenVSwitch.<br>2. Programmable Networking Devices: P4, Smart Switches, and SmartNICs.<br>3. Network Virtualization: VirtIO, SR-IOV, and Network Function Virtualization (NFV).<br>Data Centre Networking:<br>1. Networking Topologies: Fat-Tree, Clos, Leaf-Spine, Docker and Container Networking Interface (CNIs), Kubernetes. Switching in Data Centre Networking, Virtual Switches.<br>2. High-Performance Computing Networks: HPC System Architectures, HPC Networking Standards, HPC Networking Software, Low Latency Ethernet (10 GbE, 40 GbE, 100 GbE, InfiniBand FDR).<br>Named Data Networking:<br>Content Distribution on the Internet, Architectures for Information Centric Networking, Content Naming, Routing and Caching, Security in Named Data Networking. |

| | |
|---|---|
| **Course code** | **CS 628/ CS 428** |
| **Title of the course** | **Algorithmic Graph Theory** |
| Credit Structure | L - T - P - Credits<br>2-1-0-3 |
| Name of the Concerned Discipline | Computer Science & Engineering |
| Pre-requisite, if any | Discrete Mathematical Structures, Data Structures and Algorithms. |
| Scope of the course | This course shall impart basic background on the theoretical concepts of graph theory. The topics covered shall cover basic concepts and algorithmic aspects, such as graph representations, terminologies, and properties of different types of graphs, connectivity properties and algorithms, as well as some advanced topics, such as graph coloring, matching, planarity, and spectral graph theory. Undergraduate and postgraduate students shall get firm foundations in solving real-world problems such as path optimization problems, and other graph-theoretical problems that are relevant to theoretical computer science and operations research. |
| Course Syllabus | • **Introduction to graphs, trees, and their properties:** Graphs, Representation of Graphs, Various Special Graphs, Walks, Graph Isomorphism, Spanning Trees, Counting Spanning trees in polynomial time, Algorithms for minimum weighted spanning trees.<br>• **Matching Algorithms and Cycles in Graphs:** Matching, Perfect matching, Augmenting path algorithm, Bipartite matching algorithm, Hall Marriage Theorem, Konig's theorem, Matching in general graphs, Tutte's Theorem, Eulerian tour and Seven Bridges problem, Hamiltonian cycles and Travelling Salesman Problem, Necessary Conditions for Hamiltonian Graphs, Sufficient Conditions for Hamiltonian Graphs.<br>• **Coloring and Connectivity in graphs:** Vertex Coloring, Edge Coloring, Brook's theorem, Vizing Conjecture. Vertex and Edge Connectivity, Vertex- and edge-disjoint paths, testing connectivity, Algorithm for the cut-vertices, Algorithm for decomposing connected graph into blocks, Tutte's decomposition, edge-connectivity, Menger's Theorem.<br>• **Network Flow Algorithms:** Basic concepts on flows and networks, max-flow min-cut theorem, Ford-Fulkerson algorithm.<br>• **Planarity in graphs:** Planar graphs, Euler's Formula, Outer Planar Graphs, Kuratowski Theorem, Four Color Theorem.<br>• **Spectral graph theory:** Adjacency matrix, Laplacian matrix, Random regular graphs, Expander graphs, Ramanujan graphs.<br>• **Applications and Case studies:** Social Network Analysis, Complex Network Analysis. |

| **Title of the course** | **Data Center Networking** |
| Credit Structure | L-T-P–Credits<br>2-1-0-3 |
| Name of the Concerned Department | Computer Science and Engineering |
| Pre-requisite if any | Students must have knowledge of UG-level computer network courses and have good programming skills in python and C/C++. |
| Scope of the Course | In this course, students are expected to learn the data center network architectures, their underlying protocols and understand the challenges faced in designing a data center. |
| Course Syllabus | • Introduction to network architectures—Edge, Metro and Core Networks Evolution of Data Center Networks—a switch-centric DCN, a modular DCN, a wireless DCN, and a hybrid DCN.<br>• Datacenter architectures and their building blocks—Network fabric, cross connect design, Server addressing and routing protocols. Multipath routing. Overview of Software Defined Networking and Network Function Virtualization.<br>• State-of-the-art of data center networking architectures—Fat tree, Helios, VL2, Portland, B-cube, Wavecube etc.<br>• Datacenter telemetry and resource management—traffic engineering, congestion control, load balancing and resource allocation algorithms. Datacenter network performance enhancement strategies.<br>• Challenges involved in building a datacenter—cross-connect and protocol scalability, fault tolerance, security, power etc. Recent advancements in data centers—hybrid datacenter architectures etc.. |

|---|---|
| **Course Code** | **CS 632/ CS 432** |
| **Title of the Course** | **Reinforcement Learning** |
| Credit Structure | L-T-P-Credit<br>2-0-2-3 |
| Name of the Concerned Department | Computer Science and Engineering |
| Pre-requisite, if any | Students should have good understanding of linear algebra, probability and statistics, knowledge of algorithm design and analysis, and proficiency in programming. |
| Scope of the Course | • Learning the basic theory of reinforcement learning.<br>• Understanding a range of reinforcement learning algorithms with their strengths and limitations.<br>• Formulation of reinforcement learning problems for different applications. |
| Course Syllabus | **Introduction:** Types of machine learning approaches: supervised, unsupervised, reinforcement; Elements of reinforcement learning: agent, environment, policy, reward and value functions<br>**Multi-armed bandits:** Sequential decision making: exploration and exploitation; bandit problem solution: greedy, optimistic-greedy, and epsilon-greedy algorithms; Upper confidence bound bandit algorithm.<br>**Markov Processes:** Markov property, Markov chains, Markov reward process, Markov decision process (MDP), Bellman expectation equation, optimal value function, optimal policy, Bellman optimality equation.<br>**Dynamic Programming:** Dynamic programming for MDP, iterative policy evaluation, policy improvement, policy and value iteration.<br>**Monte Carlo Methods:** Model free reinforcement learning, Monte Carlo policy evaluation and estimation of action values, on- and off-policy<br>**Temporal-Difference Learning:** Temporal-Difference (TD) prediction, TD(0), TD(1), TD(λ), TD control methods: SARSA, Q-Learning and variants.<br>**Function Approximation Methods:** Risk minimization, eligibility trace for function approximation, value function approximation (VFA), Monte Carlo learning and TD learning for policy evaluation with linear VFA.<br>**Policy Gradients:** Policy gradient methods, policy search methods, gradient-free methods, finite difference methods, likelihood ratio policy gradient, bias and variance in reinforcement learning, actor-critic methods. |

| Name of the Concerned Department | Computer Science and Engineering |
| Pre-requisite, if any | Students must have knowledge of UG-level computer network courses and have good programming skills in python and C/C++. |
| Scope of the Course | This course covers a broad range of wireless networking standards including 5G/6G, and reviews important wireless network application areas. This course will provide a basic understanding and working of wireless networks to the students. |
| Course Syllabus | • Introduction to wireless networks. An overview of layered architecture, addressing and forwarding in LANs and IP networks from a wireless perspective.<br>• IEEE 802.11—Physical Layer Standards, Diversity & Rake Receivers, Spread Spectrum, Multicarrier Modulation and Orthogonal Frequency Division Multiplexing (802.11a and 802.11g). Wireless channel characteristics.<br>• Overview of wireless MAC protocols and management functions. Enhancements to support quality of service (802.11e). Overview of cellular standards GSM, GPRS, CDMA, LTE, 5G/6G and Mobility.<br>• Wireless in today's Internet—TCP over wireless, IEEE 802.11 architecture, IAPP (Inter Access Point Protocol), LoRaWAN, 6LoWPAN. Overview of wireless Ad-hoc networks. |

| Course Category | Elective |
| Credit Structure | L - T - P- Credits<br>2-0-2-3 |
| Name of the Concerned Department | Computer Science & Engineering |
| Pre-requisite, if any | Basics of Linear Algebra, probability, and basic optimization |
| Scope of the course (Objectives) | This is an introductory course in the field of deep learning. The course will cover the latest advancements in the field of deep learning. |
| Course Outcomes | At the end of the course, students will know the basics of Neural Networks, underlying maths, and how to train and select them for their applications. |
| Course Content | • History of Deep Learning, Perceptron's, and learning algorithms. Multilayer Perceptron's (MLPs), Representation Power of MLPs, Sigmoid Neurons.<br>• Feedforward Neural Networks. Backpropagation. first and second-order training methods. NN Training tricks.<br>• Introduction to Autoencoders and their characteristics, relation to PCA, Regularization in autoencoders, and Types of autoencoders.<br>• Architecture of Convolutional Neural Networks (CNN), types of CNNs.<br>• Architecture of Recurrent Neural Networks (RNN), Backpropagation through time. Encoder-Decoder Models, Attention Mechanism. Advanced Topics: Transformers and BERT. |

## Course Structure of M.Tech. / M.Tech. + Ph.D. Dual Degree Program in Communications and Signal Processing (CSP) (From AY 2013-14)

**Minimum Educational Qualification:** Four-year Bachelor's degree or five-year integrated degree (with first division as defined by the awarding Institute/ University for Indian applicants and equivalent to International applicants, as assessed by the Institute) in Electrical or Electronics and Communication or Electronics and Instrumentation or Telecommunication or Computer Science and Engineering or Information Technology. Relaxation of 5% in qualifying degree is applicable for SC and ST category applicants.

**Qualifying Examination:**
**(a) International students:** Valid score of TOEFL or IELTS and valid score of GRE.
**(b) Indian students:** Valid GATE qualification in Electronics and Communication (EC).

**Categories of Admission:**
**(a) International Students:** (i) International self-financed **(ISF)** students; (ii) International students sponsored by non-government organizations or by a reputed industry **(ISW)**; (iii) International students sponsored by foreign government or its organizations or through mutual collaborative programs of India with other countries **(GSW)**
**(b) Indian Students:** Teaching Assistantship **(TA)**; (ii) Highly motivated sponsored candidate **(SW)** on full-time basis from highly reputed R and D organizations such as DRDO, ISRO, BHEL, C-DAC, ADE, ADA, etc. and highly reputed Industries; (iii) Defense Forces **(DF)**: Candidates sponsored by the Defense Forces; (iv) Regular institute staff **(IS)** of IIT Indore on part-time basis only.
***Candidates of SW, DF and IS categories will not be provided any scholarship.***

**Duration of Program:** 2 years on full-time basis.

### Course Structure of 2-Year Full Time M. Tech. Program in CSP

**1st Year: Semester-I**

| Course Code | Course Title | Contact hours (L-T-P) | Credits |
|---|---|---|---|

| CS 618 / CS 418 | Systems and Usable Security | 2-1-0 | 3 |

**@** In addition to this course list, a student can also opt from the PG courses being offered by the other disciplines.

**NOTE:** 1. Request for conversion from M.Tech. to M.Tech. + Ph.D. dual degree will be considered after evaluating the research potential of the promising and motivated PG students at the end of the **third semester of their program.**
**2.** If a student opts for the Dual Degree Program but cannot complete the requirements of a Ph.D., an **exit option** with the M.Tech. degree can be earned at the end of the final semester of the normal M.Tech. Program by getting the M.Tech. Research Project examined in the standard manner as per the requirements for the award of an M.Tech. degree.
3. The enhancement in the scholarship will be from the beginning of the fifth semester or from the date on which all requirements for the award of M.Tech. degree are fulfilled, whichever is later**.**

**Course Structure of M.Tech. / M.Tech. + Ph.D. Dual Degree Program in VLSI Design and Nanoelectronics (from AY 2017-18 to 2019-20)**

**Minimum Educational Qualification:** Four-year Bachelor's degree or five-year integrated degree (with first division as defined by the awarding Institute/ University for Indian applicants and equivalent to International applicants, as assessed by the Institute) in Electronics and Communication Engineering or Electronics Engineering or Electrical Engineering or Instrumentation and Control Engineering or Computer Science and Engineering. *Relaxation of 5% in qualifying degree is applicable for SC and ST category applicants.*

**Qualifying Examination:**
**(a) International Students:** Valid GRE and TOEFL score **and** valid GATE qualification in EC/EE/IC/CS.
**(b) Indian Students:** valid GATE qualification or CSIR-JRF or equivalent fellowship in EC/EE/IC/CS.

**Categories of Admission:**
**(a) International Students:** (i) International self-financed **(ISF)** students; (ii) International students sponsored by non-government organizations or by a reputed industry **(ISW)**; (iii) International students sponsored by foreign government or its organizations or through mutual collaborative programs of India with other countries **(GSW)**
**(b) Indian Students:** Teaching Assistantship **(TA)**; (ii) Highly motivated sponsored candidate **(SW)** on full-time basis from highly reputed R & D organizations such as DRDO, ISRO, BHEL, C-DAC, ADE, ADA, etc. and highly reputed Industries; (iii) Defense Forces **(DF)**: Candidates sponsored by the Defense Forces; (iv) Regular institute staff **(IS)** of IIT Indore on part-time basis only.
***Candidates of SW, DF and IS categories will not be provided any scholarship.***

| EE 728 | Architectural Design of ICs | 2-1-0 | 3 |

**@** In addition to this course list, a student can also opt from the PG courses being offered by the other disciplines.

**NOTE:** 1. Request for conversion from M.Tech. to M.Tech. + Ph.D. dual degree will be considered after evaluating the research potential of the promising and motivated PG students at the end of the **third semester of their program.**

**2.** If a student opts for the Dual Degree Program but cannot complete the requirements of a Ph.D., an **exit option** with the M.Tech. degree can be earned at the end of the final semester of the normal M.Tech. Program by getting the M.Tech. Research Project examined in the standard manner as per the requirements for the award of an M.Tech. degree.

3. The enhancement in the scholarship will be from the beginning of the fifth semester or from the date on which all requirements for the award of M.Tech. degree are fulfilled, whichever is later**.**

**Course Structure of M.Tech. / M.Tech. + Ph.D. Dual Degree Program in VLSI Design and Nanoelectronics (from AY 2020-21)**

**Minimum Educational Qualification:** Four-year Bachelor's degree or five-year integrated degree (with first division as defined by the awarding Institute/ University for Indian applicants and equivalent to International applicants, as assessed by the Institute) in Electronics and Communication Engineering or Electronics Engineering or Electrical Engineering or Instrumentation and Control Engineering or Computer Science and Engineering. *Relaxation of 5% in qualifying degree is applicable for SC and ST category applicants.*

**Qualifying Examination:**
**(a) International Students:** Valid GRE and TOEFL score **and** valid GATE qualification in EC/EE/IC/CS.
**(b) Indian Students:** valid GATE qualification or CSIR-JRF or equivalent fellowship in EC/EE/IC/CS.

**Categories of Admission:**
**(a) International Students:** (i) International self-financed **(ISF)** students; (ii) International students sponsored by non-government organizations or by a reputed industry **(ISW)**; (iii) International students sponsored by foreign government or its organizations or through mutual collaborative programs of India with other countries **(GSW)**
**(b) Indian Students:** Teaching Assistantship **(TA)**; (ii) Highly motivated sponsored candidate **(SW)** on full-time basis from highly reputed R & D organizations such as DRDO, ISRO, BHEL, C-DAC, ADE, ADA, etc. and highly reputed Industries; (iii) Defense Forces **(DF)**: Candidates sponsored by the Defense Forces; (iv) Regular institute staff **(IS)** of IIT Indore on part-time basis only.
***Candidates of SW, DF and IS categories will not be provided any scholarship.***

**Duration of Program:** 2 years on full-time basis.

## Course Structure of M.S. (Research) Program in Electrical Engineering with an option to convert to M.S. (Research) + Ph.D. dual degree program (From AY 2019-20)

**Minimum Educational Qualification:** Four-year Bachelor's degree or five-year integrated degree (with first division as defined by the awarding Institute/ University for Indian applicants and equivalent to International applicants, as assessed by the Institute) in Electrical Engineering or Electronics Engineering or Electronics and Communication Engineering or Electronics and Instrumentation Engineering. (Relaxation of 5% in CPI/CPGA or percentage marks of the qualifying degree is applicable for Indian applicants belonging to SC and ST categories)

**Qualifying Examination:**
**(a) International Students:** Valid score of TOEFL or IELTS and valid score of GRE
**(b) Indian Students:** Valid GATE qualification in Electrical Engineering (EE) or Electronics and Communication Engineering (EC) or Electronics and Instrumentation Engineering (IN)

**Categories of Admission:**
**(a) International applicants:** (i) International self-financed **(ISF)** students; (ii) International students sponsored by non-government organizations or by a reputed industry **(ISW)**; (iii) International students sponsored by foreign government or its organizations or through mutual collaborative programs of India with other countries **(GSW)**
**(b) Indian applicants:** Teaching Assistantship (**TA**); (ii) Highly motivated sponsored candidate (**SW**) on full-time basis from highly reputed R & D organizations such as DRDO, ISRO, BHEL, C-DAC, ADE, ADA, etc. and highly reputed Industries; (iii) Defense Forces (**DF**): Candidates sponsored by the Defense Forces; (iv) Institute Staff (**IS**) of IIT Indore on part-time basis only.

**Duration of Program:** 2 years on full-time basis with maximum extension of one semester.

**Evaluation of Research Work and Thesis:** Students are expected to identify their Thesis Supervisor(s) within one month of joining the program so that PG Student Progress Committee (PSPC) can be formed and student can start research work from beginning of the program. Progress of the M.S. thesis will be monitored by PSPC through CERP to be conducted at the end of every semester with preferably Mid Semester evaluation also. Final evaluation of M.S. thesis will be done by at-least one External Examiner. Student must have one journal publication in SCI index from his/ her M.S. thesis for completion of the degree. Final evaluation of MS thesis will be done by at-least one Professor or equivalent level External Examiner from outside the Institute but within India. Student must have one journal publication in SCI index from his/ her MS thesis for completion of the degree.

Note

1. A Ph.D. student having **M.Tech./ M.E./ M.Phil.** qualification has to do one semester coursework (with 2-3 Ph.D. level courses). Minimum number of courses will be 2 Ph.D. level courses and one Ph.D. seminar course i.e. *(minimum coursework of 8 credits)*.
2. A Ph.D. student having **B.Tech./ BE / M.Sc. or equivalent qualification** admitted to Ph.D. Program in an **Engineering discipline** shall do 6-8 courses of at least 3 credits each and 1-2 Ph.D. Seminar courses of at least 2 credits each. Minimum number of courses will be 6 Ph.D. level courses and one Ph.D. seminar course *(minimum coursework of 20 credits).*

   * Ph.D. Seminar course can be taken either in Autumn or in Spring Semester or both as suggested by the Faculty Advisor/Thesis Supervisor.

**Electrical Engineering courses for Electives-I to VI**

*(in addition to these courses, students can also take courses from other disciplines)*

| 4. | Name of the Concerned Discipline/Discipline | Electrical Engineering Discipline |
| 5. | Pre–requisite, if any | Basic Semiconductor Physics/ Basic electronics |
| 6. | Scope of the Course | |
| 7. | Course Syllabus | Background towards molecular electronics, surfaces and interfaces, structures and organization. Introduction to Schrodinger equation, Hartree-Fock Theory, Density Functional Theory. Molecular Solids, π-conjugated polymers, one dimensional band structure of linear conjugated polymers, optical absorption and emission in conjugated oligomers/polymers. Device motivation for interface studies, Metal-semiconductor and Metal-Insulator-Semiconductor Interface. Charge transport in conjugated polymers. Hopping and Multiple trap and release model. Interface effects viz. Dipole, doping, band bending etc. in organic semiconductor devices.<br>Materials and Interface Engineering in Organic Light Emitting Diodes (OLEDs). OLED materials and device architecture for full color displays and solid state lighting. Theory and operation principle of Organic Field Effect Transistors (OFETs). Interface Characterization, Threshold Voltage and subthreshold swing and charge carrier mobility in OFETs. Application of OFETs in Displays. Organic Photovoltaic Devices (OPDs) using Polymer-Fullerene Bulk heterojunction thin filM.S.. Interface effects and improvement in Polymer Solar Cells (PSCs) efficiency. Introduction to some other advanced concepts viz. Organic electrochromic materials and devices, multiphoton absorbing materials and devices and Nonvolatile Organic Thin Film Memory Device. |

| **Title of the course** | **Advanced Photonics** |
| Credit Structure | L - T - P - Credits<br>2-1-0-3 |
| Name of the Concerned Discipline | Electrical Engineering |
| Pre-requisite, if any | NA |
| Scope of the course | This course is designed for the UG and PG students with the background in Electronics, Electrical Engineering, Physics and Material Science. This course will emphasize on the fundamentals of optoelectronics, photonics and its multidisciplinary applications including optical fiber communication. The course aims to explain basics and technology of photonic devices, components and systems including device fabrication. |
| Course Syllabus | **Introduction to Optical Fiber Communication:** Nature of light_ optical communication_ optical fibers_ propagation of light in optical fibers_ transmission characteristics of optical fibers_ fabrication of optical fibers.<br>**Planar Optical Waveguides, Passive Devices & Components:** Waveguide classification, step-index waveguides, graded-index waveguides, Coupled mode theory, grating in waveguide structure, bent waveguides, Optical Cross Connects, directional coupler, Bragg reflectors, waveguide filters, Arrayed Waveguide Grating (AWG), Multiplexer, Demultiplexer.<br>**Active Photonics Devices:** Spontaneous and stimulated emission, emission from semiconductors, LEDs – Basics and Technology, Semiconductor injection lasers, Single frequency lasers, VCSEL, Optical amplifiers, Photodetectors, Electro-optic modulator, Electro-absorption modulator, Graphene based optoelectronic devices.<br>**Silicon Photonics:** Introduction, CMOS compatible fabrication, Silicon-on-insulator (SOI) Technology, silicon modulators, non-linear silicon photonics, lasers on silicon, CMOS-Photonic hybrid integration, Silicon-germanium photodetector.<br>**Elements of Nanophotonics-** Photonic crystals and their applications, Surface plasmon polaritons, Slow light and its applications, Introduction to Optical Interconnects. |

| **Title of the course** | Antennas and Propagation |
| Credit Structure | L-T-P-Credits<br>2-1-0-3 |
| Name of the Concerned Discipline | Electrical Engineering |
| Pre-requisite, if any | Basic knowledge of Electromagnetic Theory |
| Scope of the course | The course will provide a comprehensive overview of antenna theory and analysis, including design, synthesis, and measurement. |
| Course Syllabus | Introduction: Antenna theorems and definitions, radiation patterns, beamwidth, directivity, gain, efficiency, bandwidth, polarization, input impedance, Friis transmission equation and radar equation. Potential functions and theorems: Vector potential for electric and magnetic current source, duality theorem, reciprocity theorem, reaction theorem. Single-element antennas: Linear wire antennas, loop antennas, travelling wave antennas, broadband antennas, aperture antennas, microstrip antennas,<br>reflector antennas, antenna measurements. Antenna arrays: Array theorems, two-element linear array, N-element linear array, array factor, superdirectivity, planar array, circular array. Antennas for modern communication: Circularly polarized antennas, base station antennas (cellular / Wi-Fi / GPS / WiMAX), multiple-input multiple-output (MIMO) antennas, smart antennas. |

| **Course code** | **EE 655/ EE 455** |
| **Title of the course** | **Optical Wireless Communications** |
| Course Category | Departmental/ Open Elective |
| Credit Structure | L - T - P - Credits<br>2-1-0-3 |
| Name of the Concerned Department | Electrical Engineering |
| Pre-requisite, if any | Students are expected to have a basic knowledge in Probability Theory, Signal Processing, and Communication |
| Scope of the course (Objectives) | • To give a basic understanding on modelling two different optical wireless communication (OWC) systems (i.e., Free Space Optics (FSO), Visible Light Communication (VLC))<br>• To discuss techniques for analyzing and improving the performance of OWC links. |
| Course Outcomes | • Student should be able to model the transmitter, receiver, and OWC channel.<br>• To analyze the performance of OWC links over various environments.<br>• To provide solutions for improving the performance of OWC links. |
| Course Content | 1. **Introduction to OWC:** Introduction to FSO, VLC and its applications, Relevance of OWC in 6G communication and industry 5.0.<br>2. **System Modelling:** FSO and VLC transmitter design, Modulation techniques, OWC receivers<br>3. **Channel Modelling:** Terrestrial and satellite FSO communication scenarios, Aerial-platform based FSO communication, Propagation models for VLC.<br>4. **Performance Analysis:** Outage, Symbol error probability and Channel capacity analyses<br>5. **Link Performance Improvement Techniques:** Relaying technique, Spatial diversity, Aperture averaging, Hybrid OWC/RF Communication. |

|---|---|---|
| 1. | Course Code | **EE 701** |
| 2. | Title of the Course | **Time-Frequency Analysis** |
| 3. | Credit Structure | L-T-P-Credits<br>2-1-0-3 |
| 4. | Name of the Concerned Discipline | Electrical Engineering |
| 5. | Pre–requisite, if any | Basic knowledge of Fourier analysis |
| 6. | Scope of the Course | Many signals exhibit frequency characteristics that change over time. Examples include such as speech, marine mammal sounds, heart rate, electroencephalogram, machine vibrations, sonar, radar, and communication signals. Understanding these changes is important because they are often indicative of the underlying processes that generated the signal. Time-frequency analysis, also called time-varying spectral analysis, is a technique for studying the time-dependent spectral changes in a signal. |
| 7. | Course Syllabus | Basics of Fourier Analysis, Spectral Theory, Fundamentals of Time-Frequency Analysis, Instantaneous Frequency and Instantaneous Bandwidth, Gabor Transform, The Short-Time Fourier Transform/Spectrogram, Time-Frequency Localization, Continuous Wavelet Transform/ Scalogram, Multiresolution Analysis, Quadratic Time-Frequency Transform, Wigner-Ville Distribution, Signal Processing Applications, Image Processing Applications. |

| 2 | **Title of the course** | **Embedded Systems and Computing** |
| 3 | Credit structure | L-T-P-C<br>2-1-0-3 |
| 4 | Name of the concerned discipline | Electrical Engineering |
| 5 | Pre-requisite (if any) | Microprocessors and Digital Systems |
| 6 | Scope of the course | Embedded Systems has found wide applications in almost every electronic device. The need for any electronic engineer would be to learn how to design systems for specific applications such as mobile phones and other electronic appliances and also re-design some of the existing systems. After introducing the developments in this field, this course would focus on development of these systems through programming. |
| 7 | Course syllabus | Overview – Characteristics of embedded computing applications, Concept of real-time systems, design process and system integration.<br>Embedded System Architecture – CISC and RISC architecture and examples, memory system architecture, co-processors and hardware accelerators<br>Designing embedded computing platform – Memory devices and characteristics, I/O systems, designing with processors, design methodologies.<br>Programming embedded systems – Use of programming language characteristics, programming and run-time environment and debugging. Application examples. |

|---|---|---|
| 1 | **Course code** | **EE 722** |
| 2 | **Title of the course** | **IC Design for IoT System** |
| 3 | Credit structure | L-T-P-C<br>2-1-0-3 |
| 4 | Name of the concerned discipline | Electrical Engineering |
| 5 | Pre-requisite (if any) | Basic of MOSFETs and Circuit Design |
| 6 | Scope of the course | |
| 7 | Course syllabus | **Unit 1: Basics of IoT System:** Introduction to IoT landscape, use cases (Smart Home, Smart Energy, Smart Vehicle, Smart City etc.), Standardizing the IoT, Wireless Sensor Network, Design Methodologies for Smart things (Using commercial development boards).<br>**Unit 2: IoT Devices and Networks:** Types of connected device, bridging physical and digital (sensors and actuators), conserving battery life, types of network, architecture of IoT networks, network communication patterns.<br>**Unit 3. Power Optimization Techniques and Power Management Unit:** Sources of power dissipation and optimizations techniques, low power bus, parallel architecture, reference circuits, DC-DC converter, charge pumps, linear regulator.<br>**Unit 4. Standard IoT Protocol Architecture and Implementation:** Design and analysis of basic communication protocols: GPIO, SPI, I2C, UART and other upcoming standard protocol architecture: Bluetooth, ZigBee, Z-Wave, 6LowPAN, Wi-Fi, NFC, LoRaWAN, SigFox etc<br>**Unit 5: IoT-System Design:** System design using IoT development boards, Custom SoC design flow, IP-design and re-use in custom SoC, IoT System design using custom SoC. |

# Course Structure

# of

# PG and Ph.D. Program in

# Mechanical Engineering and

# Syllabi of Courses

**Course Structure of M.Tech./ M.Tech. + Ph.D. Dual Degree Program in Production and Industrial Engineering (PIE)** ***(from AY 2013-14 to AY 2021-22)*** ***[Renamed as Advanced Manufacturing (AM)]***

**Minimum Educational Qualification:** Four-year Bachelor's degree or five-year integrated degree (with first division as defined by the awarding Institute/ University for Indian applicants and equivalent to International applicants, as assessed by the Institute) in Mechanical, Production, Industrial, Manufacturing, Materials and Metallurgy, Mechatronics, or Automobile Engineering. *Relaxation of 5% in qualifying degree is applicable for SC and ST category applicants.*

**Qualifying Examination:**
**(a) International Students:** Valid score of TOEFL or IELTS, AND valid score of GRE
**(b) Indian Students:** Valid GATE qualification in Mechanical Engineering (ME) or Production and Industrial Engineering (PI).

**Categories of Admission:**
**(a) International Students:** (i) International self-financed **(ISF)** students; (ii) International students sponsored by non-government organizations or by a reputed industry **(ISW)**; (iii) International students sponsored by foreign government or its organizations or through mutual collaborative programs of India with other countries **(GSW)**
**(b) Indian Students:** Teaching Assistantship **(TA)**; (ii) Highly motivated sponsored candidate **(SW)** on full-time basis from highly reputed R & D organizations such as DRDO, ISRO, BHEL, C-DAC, ADE, ADA, etc. and highly reputed Industries; (iii) Defense Forces **(DF)**: Candidates sponsored by the Defense Forces; (iv) Regular institute staff **(IS)** of IIT Indore on part-time basis only.
***Candidates of SW, DF and IS categories will not be provided any scholarship.***

**Duration of Program:** 2 years on full-time basis.

**Course Structure of 2-Year Full Time M. Tech. Program in PIE**

**1st Year: Semester-I**

| Course Code | Course Title | Contact hours (L-T-P) | Credits |

| ME 756 / ME 456 | Industrial Automation | 2-0-2 | 3 |

**@** In addition to this course list, a student can also opt from the PG courses being offered by the other disciplines.

**NOTE:** 1. Request for conversion from M.Tech. to M.Tech. + Ph.D. dual degree will be considered after evaluating the research potential of the promising and motivated PG students at the end of the **third semester of their program.**

**2.** If the student opts for the Dual Degree Program but cannot complete the requirements of a Ph.D., an **exit option** with the M.Tech. Degree can be earned at the end of the final semester of the normal M.Tech. Program by getting the M.Tech. Research Project examined in the standard manner as per the requirements for the award of an M.Tech. degree.

3. The enhancement in the scholarship from M.Tech. to Ph.D. will be from the beginning of the fifth semester or from the date on which all requirements for the award of M.Tech. degree are fulfilled whichever is later**.**

**Course Structure of M.Tech./ M.Tech. + Ph.D. Dual Degree Program in Advanced Manufacturing (AM) *{earlier known as Production and Industrial Engineering (PIE)} from AY 2022-23 onwards***

**Minimum Educational Qualification:** Four-year Bachelor's degree or five-year integrated degree (with first division as defined by the awarding Institute/ University for Indian applicants and equivalent to International applicants, as assessed by the Institute) in Mechanical, Production, Industrial, Manufacturing, Materials and Metallurgy, Mechatronics, or Automobile Engineering. *Relaxation of 5% in qualifying degree is applicable for SC and ST category applicants.*

**@** In addition to this course list, a student can also opt from the PG courses being offered by the other disciplines.

**NOTE:** 1. Request for conversion from M.Tech. to M.Tech. + Ph.D. dual degree will be considered after evaluating the research potential of the promising and motivated PG students at the end of the **third semester of their program.**

**2.** If the student opts for the Dual Degree Program but cannot complete the requirements of a Ph.D., an **exit option** with the M.Tech. Degree can be earned at the end of the final semester of the normal M.Tech. Program by getting the M.Tech. Research Project examined in the standard manner as per the requirements for the award of an M.Tech. degree.

3. The enhancement in the scholarship from M.Tech. to Ph.D. will be from the beginning of the fifth semester or from the date on which all requirements for the award of M.Tech. degree are fulfilled whichever is later**.**

## Course Structure of M.Tech. / M.Tech. + Ph.D. Dual Degree Program in

## Mechanical Systems Design (MSD)

**Minimum Educational Qualification:** Four-year Bachelor's degree or five-year integrated degree (with first division as defined by the awarding Institute/ University for Indian applicants and equivalent to International applicants, as assessed by the Institute) in Mechanical Engineering. *Relaxation of 5% in qualifying degree is applicable for SC and ST category applicants.*

**Qualifying Examination:**
**(a) International Students:** Valid score of TOEFL or IELTS, AND valid score of GRE
**(b) Indian Students:** Valid GATE qualification in Mechanical Engineering (ME).

**Categories of Admission:**
**(a) International Students:** (i) International self-financed **(ISF)** students; (ii) International students sponsored by non-government organizations or by a reputed industry **(ISW)**; (iii) International students sponsored by foreign government or its organizations or through mutual collaborative programs of India with other countries **(GSW)**
**(b) Indian Students:** Teaching Assistantship **(TA)**; (ii) Highly motivated sponsored candidate **(SW)** on full-time basis from highly reputed R & D organizations such as DRDO, ISRO, BHEL, C-DAC, ADE, ADA, etc. and highly reputed Industries; (iii) Defense Forces **(DF)**: Candidates sponsored by the Defense Forces; (iv) Regular institute staff **(IS)** of IIT Indore on part-time basis only.
***Candidates of SW, DF and IS categories will not be provided any scholarship.***

**Duration of Program:** 2 years on full-time basis with maximum extension of one semester.

### Course Structure of 2-Year Full Time M.Tech. Program in Mechanical Systems Design

**1st Year: Semester-I**

| Course Code | Course Title | Contact hours (L-T-P) | Credits |
|---|---|---|---|
| ME 646/ ME 446* | Dynamics and Control Systems | 2-1-0 | 3 |
| ME 647 | Dynamics and Control Systems Lab | 0-0-3 | 1.5 |
| ME 730* | Theory of Elasticity | 2-1-0 | 3 |
| ME 736/ ME 436* | Finite Element Methods | 2-0-2 | 3 |
| ME 738/ ME 438* | Composite Materials | 2-1-0 | 3 |
| ZZ XXX | Elective – I | X-X-X | 3 |
| | | **Total minimum credits earned during the semester** | 16.5 |
| **Additional course (as per the requirement basis)** | | | |
| HS 641* | English Communication Skills | 2-0-2 | PP/NP |

**1st Year: Semester-II**

| Course Code | Course Title | Contact hours (L-T-P) | Credits |
|---|---|---|---|
| ME 632/ 432 | Vibrations and Noise Control | 2-1-0 | 3 |
| ME 634/ 434 | Principle of Product Design | 2-1-0 | 3 |
| ME 637/ 437 | Fracture Mechanics | 2-1-0 | 3 |
| ME 656 | Vibrations and Noise Control Lab | 0-0-3 | 1.5 |
| ZZ XXX | Elective - II | X-X-X | 3 |
| ZZ XXX | Elective - III | X-X-X | 3 |
| ME 698 | PG seminar course | 0-2-0 | 2 |

Degree can be earned at the end of the final semester of the normal M.Tech. Program by getting the M.Tech. Research Project examined in the standard manner as per the requirements for the award of an M.Tech. degree.

3. The enhancement in the scholarship from M.Tech. to Ph.D. will be from the beginning of the fifth semester or from the date on which all requirements for the award of M.Tech. degree are fulfilled whichever is later**.**

**M.Tech., M.Tech.+Ph.D. Degree Program in Thermal Energy Systems (TES)**
**(from AY 2022-23 onwards)**

**Minimum Educational Qualification:** Four-year Bachelor's degree or five-year integrated degree (with first division as defined by the awarding Institute/University for Indian applicants and equivalent to International applicants, as assessed by the Institute) in Mechanical Engineering. *Relaxation of 5% in qualifying degree is applicable for SC and ST category applicants.*

**Qualifying Examination:**

(a) International Students: Valid score of TOEFL or IELTS, AND valid score of GRE

(b) Indian Students: Valid GATE qualification in Mechanical Engineering (ME).

**Categories of Admission:**

**International Students:** (i) International self-financed (ISF) students; (ii) International students sponsored by non-government organizations or by a reputed industry (ISW); (iii) International students sponsored by a foreign government or its organizations or through mutual collaborative programs of India with other countries **(GSW)**

**Indian Students:** Teaching Assistantship (TA); (ii) Highly motivated sponsored candidate (SW) on full-time basis from highly reputed R & D organizations such as DRDO, ISRO, BHEL, C-DAC, ADE, ADA, etc. and highly reputed Industries; (iii) Defense Forces (DF): Candidates sponsored by the Defense Forces; (iv) Regular institute staff (IS) of IIT Indore on part-time basis only.

**Duration of Program:** 2 years on full-time basis with maximum extension of one semester.
**Annual Intake:** 10 TA

**Course Structure of 2-Year Full-Time M.Tech. Program in Thermal Energy Systems**

**1st Year: Semester-I**

| Course Code | Course Title | Contact hours (L-T-P) | Credits |
|---|---|---|---|
| ME 609 | Thermal Energy Storage | 3-1-0 | 4 |
| ME 602 | Advanced Heat Transfer | 3-0-2 | 4 |
| ME 603 | Advanced Fluid Dynamics | 2-0-2 | 3 |
| ME 416/ ME 616 | Non-conventional Energy Sources | 2-1-0 | 3 |
| ME 677 | Advanced Thermodynamics | 2-0-2 | 3 |
| **Total minimum credits earned during the semester** | | | **17** |
| **Additional course (as per the requirement basis)** | | | |
| HS 641 | English Communication Skills | 2-0-2 | PP/NP |

**1st Year: Semester-II**

| Course Code | Course Title | Contact hours (L-T-P) | Credits |
|---|---|---|---|
| ME 618/ ME 418 | Computational Fluid Dynamics (CFD) | 2-0-2 | 3 |
| ME 678/ ME 478 | Solar Energy Technology | 2-1-0 | 3 |
| ZZ XXX | Elective -I | X-X-X | 3 |
| ME 6XX | Elective -II | X-X-X | 3 |
| ME 6XX | Elective -III | X-X-X | 3 |
| ME 698 | PG seminar course | 0-2-0 | 2 |
| **Total minimum credits earned during the semester** | | | **17** |

**2nd Year: Semester-III**

| Course Code | Course Name | Contact hours (L-T-P) | Credits |
|---|---|---|---|
| ME 799 | M.Tech. Research Project (Stage-I) | 0-0-36 | 18 |

**2nd Year: Semester-IV**

| Course Code | Course Name | Contact hours (L-T-P) | Credits |
|---|---|---|---|
| ME 800 | M.Tech. Research Project (Stage-II) | 0-0-36 | 18 |
| **Total minimum credits to be earned during the program** | | | **70** |

**Mechanical Engineering Courses for Elective I, II, III, @**

| Course Code | Course Name | Contact hours (L-T-P) | Credits |
|---|---|---|---|
| ME 601 | Principle of Measurement | 3-1-0 | 4 |
| ME 604 | Microfluidics | 2-1-0 | 3 |
| ME 606/ ME 406 | Smart Materials based Energy Harvesters Design | 2-1-0 | 3 |
| ME 607/ ME 407 | Biofluid Mechanics | 2-1-0 | 3 |
| ME 610 | Compressible Flow | 2-1-0 | 3 |
| ME 611/ ME 411 | Refrigeration and air conditioning | 2-1-0 | 3 |
| ME 613/ ME 413 | Internal Combustion Engines | 2-1-0 | 3 |
| ME 620/ ME 420 | Alternative Cooling Technologies | 2-1-0 | 3 |

@ In addition to this course list, a student can also opt from the PG courses being offered by the other Departments.

**Course Structure of M.S. (Research) Program in Mechanical Engineering with an option to convert to M.S. (Research) + Ph.D. dual degree program (From AY 2019-20)**

**Minimum Educational Qualification:** Four-year Bachelor's degree or Five-year integrated degree (with first division as defined by the awarding Institute/ University for Indian applicants and equivalent to International applicants, as assessed by the Institute) in Mechanical or Production or Manufacturing or Industrial or Mechatronics or Aerospace or Automobile or Robotics Engineering. (Relaxation of 5% in CPI/CPGA or percentage marks of the qualifying degree is applicable for Indian applicants belonging to SC and ST categories)

**Qualifying Examination:**
**(a) International Students:** Valid score of TOEFL or IELTS and valid score of GRE.
**(b) Indian Students:** Valid GATE qualification in Mechanical Engineering (ME) or Production and Industrial Engineering (PI) or Aerospace Engineering (AE).

**Categories of Admission:**
**(a) International Students:** (i) International self-financed **(ISF)** students; (ii) International students sponsored by non-government organizations or by a reputed industry **(ISW)**; (iii) International students sponsored by foreign government or its organizations or through mutual collaborative programs of India with other countries **(GSW)**
**(b) Indian Students:** Teaching Assistantship (**TA**); (ii) Highly motivated sponsored candidate (**SW**) on full-time basis from highly reputed R & D organizations such as DAE, DRDO, ISRO, BHEL, C-DAC, ADE, ADA, etc. and highly reputed Industries; (iii) Defense Forces (**DF**): Candidates sponsored by the Defense Forces; (iv) Institute Staff (**IS**) of IIT Indore on part-time basis only.

**Duration of Program:** 2 years on full-time basis with maximum extension of one semester.

**Evaluation of Research Work and Thesis:** Students are expected to identify their Thesis Supervisor(s) within one month of joining the program so that PG Student Progress Committee (PSPC) can be formed and student can start research work from beginning of the program. Progress of the M.S. thesis will be monitored by PSPC through CERP to be conducted at the end of every semester with preferably Mid Semester evaluation also. Final evaluation of M.S. thesis will be done by at-least one External Examiner. Student must have one journal publication in SCI index from his/ her M.S. thesis for completion of the degree. Final evaluation of MS thesis will be done by at-least one Professor or equivalent level External Examiner from outside the Institute but within India. Student must have one journal publication in SCI index from his/ her MS thesis for completion of the degree.

**1st year: Semester-I**

## Course Structure for Ph.D. Program in Mechanical Engineering

### (A) Semester-I (autumn / spring)

| Sr. No. | Course code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1 | ZZ xxx | Elective-I | x-x-x-3 |
| 2 | ZZ xxx | Elective-II | x-x-x-3 |
| 3 | ZZ xxx | Elective-III + | x-x-x-3 |
| 4 | ME 797* / ME 798* | Ph.D. Seminar Course | 0-2-0-2 |

### (B) Semester-II (spring / autumn)

| Sr. No. | Course code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1 | ZZ xxx | Elective- IV + | x-x-x-3 |
| 2 | ZZ xxx | Elective-V + | x-x-x-3 |
| 3 | ZZ xxx | Elective-VI + | x-x-x-3 |
| 4 | ME 798* / ME 797* | Ph.D. Seminar Course | 0-2-0-2 |

Note

1. A Ph.D. student having **M.Tech./ME//MPhil** qualification has to do one semester coursework (with 2-3 Ph.D. level courses). Minimum number of courses will be 2 Ph.D. level courses and one Ph.D. seminar course i.e. *(minimum coursework of 8 credits)*.
2. A Ph.D. student having **B.Tech./ BE / M.Sc. or equivalent qualification** admitted to Ph.D. Program in an **Engineering discipline** shall do 6-8 courses of at least 3 credits each and 1-2 Ph.D. Seminar courses of at least 2 credits each. Minimum number of courses will be 6 Ph.D. level courses and one Ph.D. seminar course *(minimum coursework of 20 credits).*

   * Ph.D. Seminar course can be taken either in Autumn or in Spring Semester or both as suggested by the Faculty Advisor/Thesis Supervisor.

**Mechanical Engineering Courses for Electives-I to VI** *(in addition to these courses, the students can take courses from other disciplines also.)*

| S. No. | Course Code | Course Title | Contact Hours (L-T-P-C) |

| 4. | Name of the Concerned Discipline | Mechanical |
| 5. | Pre–requisite, if any | None |
| 6. | Scope of the Course | |
| 7. | Course Syllabus | **Basics of Measurement Systems:** Introduction, Classification of measurement systems, Errors in measurements, Statistical analysis of measured data, Regression analysis, Introduction to uncertainty, uncertainty analysis, Estimation of overall uncertainty, Presentation of data, Design of experiments.<br>**Measurement of Fundamental Quantities:** (I) Measurement of Temperature: Science and art of temperature measurement, Temperature measurement by mechanical effects, Thermo electric thermometry, Resistance thermometry, Pyrometer, Measurement of transient temperature, systematic errors in temperature measurement, Laboratory practice. (ii) Measurement of Pressure: Manometers, Bourdon gauge, Pressure transducers, Measurement of transient pressure, Measurement of vacuum, Laboratory practice. (iii) Measurement of Flow Velocity: Pitot static and impact probes, Velocity measurement based on thermal effects, Doppler velocimeter, Laboratory practice.<br>**Measurement of Derived Quantities:** (I) Measurement of Heat flux and Heat Transfer Coefficient: Foil type heat flux gauge, Thin film sensors, Cooled thin wafer heat flux gauge, Axial conduction, Guarded probe, Slug type sensor, Film coefficient transducers, cylindrical heat transfer coefficient probe, Laboratory practice. (ii) Measurement of Volume Flow Rate: Variable area type flow meters, Rota meter, Miscellaneous type of flow meters, Factors to be considered in the selection of flow meters, Calibration of flow meters, Laboratory practice. (iii) Measurement of Stagnation and Bulk Mean Temperature: Introduction, Shielded thermocouple stagnation temperature probe, Dual thin film enthalpy probe, flow in rectangular duct, Laboratory practice.<br>**Measurement of Thermo-physical Properties, Radiation Properties of Surfaces and Gas Concentration:** (I) Measurement of Thermo-physical Properties: Thermal conductivity- steady and transient methods, Measurement of heat capacity, Calorific values of fuel, Viscosity of fluids, Laboratory practice. (ii) Measurement of Radiation Properties of Surfaces: Introduction, Features of radiation measuring instruments, Integrating sphere, Measurement of emissivity, Laboratory practice. (iii) Measurement of Gas Concentration: Introduction, Non separation methods, Separation methods, Laboratory practice.<br>**Measurement of Other Engineering Quantities:** Fundamentals of |

| | | |
|---|---|---|
| | | measurements of force, torque, strain, vibration, noise, surface roughness, geometrical or form tolerances.<br>**Data Acquisition, Manipulation and Presentation:** Introduction, Mechanical signals conditioning, Electrical signal conditioning, Examples from laboratory practices. |

| 4. | Name of the Concerned Discipline | Mechanical Engineering |
| 5. | Pre-requisite, if any | Heat Transfer |
| 6. | Scope of the Course | |
| 7. | Course Syllabus | **Conduction:** Derivation of energy equation for conduction in three dimensions – Initial and boundary conditions. Transient conduction-Concept of Biot number – Lumped capacitance formulation unsteady conduction from a semi-infinite solid-solution by similarity transformation method. Solution of the general 1D unsteady problem by separation of variables, Laplace equation – solution by variable separable method – concept of superposition and homogeneous boundary conditions. Numerical solution of conduction problems. Basic ideas of finite difference method – forward, backward and central differences – Discretization for the unsteady heat equation.<br>**Convection:** Derivation of governing equation for convection. 2D laminar coquette flow and nondimensional numbers. Concept of Adiabatic wall temperature. Integral methods for momentum and thermal boundary layers. Pipe flow – concept of developed temperature profile and solutions for constant wall flux and constant wall temperature boundary conditions. Solution of entry length problem for constant wall and constant wall flux boundary conditions. Natural convection – governing equation, integral solution for flat surface.<br>**Radiation:** Introduction. Concept of black body, derivation of black body radiation laws from first principles Need for view factors, concept of view factors, mathematical definition. Shape factor calculations. Radiosity, Irradiation method for gray diffuse enclosures. Gas Radiation. |

| **Course code** | **ME 608/ ME 408** |
| **Title of the course** | Hybrid Electric Vehicles |
| Credit Structure | L-T-P-Credits<br>2-1-0-3 |
| Name of the Concerned Discipline | Mechanical Engineering |
| Pre-requisite, if any | Basic knowledge of Mechanical and Electrical Engineering |
| Scope of the course | This course is designed for final year undergraduate students and masters students who want to develop their knowledge about hybrid electric vehicles. Conventional I.C. Engine and electric powered vehicle will be analysed along with requirement of hybrid vehicle. Various mechanical layouts of hybrid powertrains will be examined to understand how they influence the performance and complexity of the powertrain. Sizing of the powertrains, Energy Management system and controls in the hybrid powertrain modes will be examined. |
| Course Syllabus | History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.<br><br>Conventional Vehicles: Basics of vehicle performance, vehicle power source characterization, transmission characteristics, mathematical models to describe vehicle performance.<br><br>Hybrid Electric Drive-trains: Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.<br><br>Electric Drive-trains: Basic concept of electric traction, introduction to various electric drive-train topologies, power flow control in electric drive-train topologies.<br><br>Electric Propulsion unit: Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Induction Motor drives, Permanent Magnet Motor drives, and Switch Reluctance Motor drives.<br><br>Energy Storage: Energy Storage Requirements in Hybrid and Electric Vehicles with Battery, Fuel Cell, Super Capacitor, and Flywheel based energy storage, Hybridization of different energy storage devices. Matching the electric machine and the internal combustion engine.<br><br>Energy Management Strategies. |

|---|---|
| **Title of the course** | **Vibrations and Noise Control** |
| Credit Structure | L-T-P–Credits<br>2-1-0-3 |
| Name of the Concerned Discipline | Mechanical Engineering |
| Pre-requisite, if any | NA |
| Scope of the course | With the increasing demand of noise and vibration engineers in industry, this course is designed to know theoretical and practical aspects of noise and vibration. This course covers basics of noise and vibration, measurement and analysis of noise and vibration, control of noise and vibration and industrial case studies. |
| Course Syllabus | **Introduction:** Basic vibration theory, vibration of one degree, two degrees, and multi-degrees of freedom systems.<br>**Transient vibrations**, vibration of beams.<br>**Measurement and Analysis of Vibrations:** Lagrange's equation, vibration measuring and analyzing instruments. Various types of transducers, data acquisition system, vibration analysis techniques<br>**Design for vibration control**: Vibration absorbers, viscoelastic damping, active vibration control.<br>**Fundamentals of Noise**: One dimensional wave equation, Sound propagation in 3-D space, some important acoustic quantities and relations, additive effects of sound.<br>**Measurement of sound:** Various types of transducers, measurement of sound pressure, sound intensity and sound power.<br>**Noise Control:** Principles of passive noise control, sound absorption, noise barriers.<br>**Case studies:** Source identification and fault detection from noise and vibration signals in mechanical systems such as bearings, gears, fans, blower and pumps, electrical equipment etc. |

|---|---|
| **Course code** | **ME 634/ ME 434** |
| **Title of the course** | **Principles of Product Design** |
| Credit Structure | L-T-P–Credits<br>2-1-0-3 |
| Name of the Concerned Discipline | Mechanical Engineering |
| Pre-requisite, if any | NA |
| Scope of the course | The scope of the course is to integrate the design, marketing, engineering, and business functions of the firm in creating a new product. The course is intended to provide the following benefits: •Competence with a set of tools and methods for product design and development. • Describe an engineering design and development process •Ability to coordinate multiple, interdisciplinary tasks to achieve a common objective. •Employ engineering, scientific, and mathematical principles to execute a design from concept to finished product. •Reinforcement of specific knowledge from other courses through practice and reflection in an action-oriented setting. |
| Course Syllabus | Overview of the Design Process – Philosophy of Engineering Design, Steps involved in the Design Process S curves, Communications during design process. Understanding the customer need – Steps involved in developing Engineering Design Specifications. The technique of Quality Function Deployment (QFD). Case studies in QFD. Functional Design – Functions in engineering Design. Basics of Function Structure – Functional Basis, Functional decomposition and flow. Product Concept – Various methods of concept generation. The method of theory of the resolution of invention-related tasks (TRIZ). Concept Selection and methods of evaluation. Embodiment design- product architecture, configuration, parametric design, systems approach and other consideration of embodiment design. An introduction to product metrics. Product evaluation techniques. |

|---|---|
| **Course code** | **ME 637/ ME 437** |
| **Title of the course** | **Fracture Mechanics** |
| Credit Structure | L - T - P – Credits<br>2-1-0-3 |
| Name of the Concerned Discipline | Mechanical Engineering |
| Pre-requisite, if any | Theory of elasticity |
| Scope of the course | This course introduces the fundamental concepts of the fracture mechanics useful in designing high risk products such as nuclear plants, airplanes, space vehicles, submarines, etc. This course will not only provide enough background to work in industries but also build foundation to start research in the area of fracture mechanics, computational fracture mechanics and mechanical behaviour of materials. |
| Course Syllabus | Introduction and overview, Energy concepts in fracture mechanics: atomistic view of fracture, Griffith energy balance, Irwin-Orowan extension, Energy release rate G and R curve; Linear elastic fracture mechanics: stress and displacement fields near crack tip for mode-I, II and III fracture, stress intensity factor K, relation between G and K, small scale yielding conditions, Irwin's plastic zone correction, Dugdale model, Fracture toughness Kc, Westergaard method, Principle of superposition, Non Linear fracture mechanics; J Integral, Plastic crack tip (HRR) fields, Ductile fracture criterion, J Integral Testing, J-controlled crack growth and stability, Engineering approach to Plastic Fracture; Fatigue Failure. |
| Suggested Books | 1. T. L. Anderson, **Fracture Mechanics – Fundamentals & Applications**, CRC press, 3rd Ed., 2005, ISBN-10: 0849316561.<br>2. M. F. |---|---|
| **Course code** | **ME 643/ ME 443** |
| **Title of the course** | **Micromechanics and Nanomechanics** |
| Credit Structure | L - T - P – Credits 2-1-0-3 |
| Name of the Concerned Discipline | Mechanical Engineering |
| Pre-requisite, if any | NA |
| Scope of the course | This course is designed for students from diverse fields of study. This course provides a single window for students to comprehend wide range of subjects/research topics of advanced micro- and nano-materials and prepare them to characterize multifunctional behavior of advanced material systems. The first part of the subject includes modules of fundamentals of micromechanics. The second part of the subject includes modules on useful concepts in molecular modeling. A partial focus of the subject is to provide a hands-on training in the application of computer modeling of SOLID materials at the atomic scale. |
| Course Syllabus | Introduction to micromechanics and nanomechanics. Preliminaries of continuum mechanics, micromechanical homogenization theory: Ergodicity principle, representative volume element, eigenstrains and eigenstress, inclusions and inhomogeneities; Effective moduli of heterogeneous materials (single and multi-inclusion approaches), Hill's bounds, Voigt and Reuss bounds, Hashin-shtrikman variational principles Micromechanical damage theory. Basics of atomistic, interatomic potentials, lattice defects; Molecular statics and dynamics: time integration, temperature and pressure control, statistical ensembles, potential field, Virial stress; Bohr's correspondence principle; Multiscale modeling; Structural mechanics of carbon-based and boron nitride-based nanomaterials. |
| Suggested Books | 1. S. Nemat-Nasser and M. Hori, **Micromechanics: Overall Properties of Heterogeneous Materials**, North Holland, Amsterdam, 1998, ISBN 978-0444500847<br>2. | **Course code** | **ME 645/ ME 445** |
| **Title of the course** | **Mobile Robotics** |
| Credit Structure | L - T - P - Credits<br>2-0-2-3 |
| Name of the Concerned Discipline | Mechanical Engineering |
| Pre-requisite, if any | NA |
| Scope of the course | This course provides an introduction to mobile robotic systems and motion control methods with such systems from a computational and real-time perspective. Students will understand the algorithmic approach towards designing intelligent and autonomous mobile robotic systems. Students will learn about a variety of mobile robotic platforms, their applications and uses. Students will learn the basics mechanical and electrical systems of these mobile robots, including sensors, locomotion and manipulation hardware. |
| Course Syllabus | Introduction to Mobile Robots - Tasks of mobile robots, robot_s manufacturers, type of obstacles and challenges, tele-robotics, philosophy of robotics, service robotics, types of environment representation. Ground Robots: Wheeled and Legged Robots, Aerial Robots, Underwater Robots and Surface Robots. Kinematics and Dynamics of Wheeled Mobile Robots (two, three, four - wheeled robots, omni-directional and macanum wheeled robots). Sensors for localization: magnetic and optic position sensor, gyroscope, accelerometer, magnetic compass, inclinometer, GNSS and Sensors for navigation: tactile and proximity sensors, ultrasound rangefinder, laser scanner, infrared rangefinder, visual system, Kinect. Localization and Mapping in mobile robotics. Motion Control of Mobile Robots (Model and Motion based Controllers): Lyapunov-based Motion Control Designs and Case Studies. Understand the current application and limitations of Mobile Robots. Introduction to Mobile Manipulators and Cooperative Mobile Robots. |

| Name of the Concerned Discipline | Mechanical Engineering |
| Pre-requisite, if any | NA |
| Scope of the course | It provides a platform for understanding the basic concepts of linear control theory and its application to practical systems. |
| Course Syllabus | Dynamic model development and simulation of simple mechanical systems using Matlab and Mathematica. Numerical simulation of simple mechanical systems. Stability analysis of simple mechanical systems using linear system theory namely root locus and Bode plot. Linear controller (P,PI,PD and PID) design for simple position control of mechanical systems. State space model development and dynamic simulation using Simulink. Full state feedback controller and Pole placement technique. Design of full state feedback controller. State observer and design of state observer with controller. |

Hobbs, **Accelerated Reliability Engineering: HALT and HASS,** Wiley, 2000, ISBN: 9780471979661.<br>Suggested web page: www.weibull.com |
| 8. | Lab | It will mainly involve use of computer software (Weibull++, BlockSim, ALTA, RENO, etc.) to solve complex engineering problems/ case studies as well as manually solving some of the basic tutorials and interpreting the results.<br>Test data, industry data, data available in various standards like Lambda Predict, etc., should be used for this purpose. |

| | |
|---|---|
| Course code | **ME 674** |
| Title of the course | **Smart Manufacturing** |
| Credit Structure | L - T - P – Credits<br>(2-0-2-3) |
| Name of the Dept. | Mechanical Engineering |
| Pre–requisite, if any | None |
| Scope of the course | The course aims at introducing various technologies involved in the development and operations of highly connected, knowledge-enabled industrial enterprise where all organizations and operating systems are linked, leading to enhanced productivity, sustainability, and economic performance. Laboratory experiments are designed to provide hands-on experience and discussion on case studies for the implementations of various technologies pertaining to smart manufacturing in the industry. |
| Course Syllabus | **Introduction:** Global trends bringing major changes to society, products, and the manufacturing process. Evolution of manufacturing from Industry 1.0 to Industry 4.0. Various technologies for smart manufacturing. Barriers in industry 4.0 implementation. Business models for smart manufacturing (Servitization, mass customization, customer co-creation, etc.).<br>**Assessment for Industry 4.0:** Evaluating an industry for its readiness for smart manufacturing. Identifying future goals for smart manufacturing. Technology road map. Expected benefits and economic impacts.<br>**Design of Intelligent Production Facilities:** Cyber Physical Production System, Digital twin concepts. Asset administration shell. Simulation capabilities. RAMI 4.0 and other standards. M2M communication. Smart Devices. Review the integral role that sensors play in smart manufacturing. Evaluate sensors and assess the types of data that sensors produce. Explore manufacturing process control, the role of feedback, process modeling, and monitoring.<br>**Operations Planning in Intelligent Factory:** Distributed decision making. Agent based modelling and optimization.<br>**Machine Learning and AI in Manufacturing**: Leveraging data for optimal maintenance and product quality. Predictive maintenance with machine learning, Enabling predictive quality analytics with machine learning, supervised machine learning, classification, regression, unsupervised machine learning, clustering, ANN, etc.<br>**Laboratory Exercise:** Discussion on case studies. Use of AI in manufacturing. Development of cyber twin. Establishing M2M communication. Distributed decision making. |

| | |
|---|---|
| Course Code | **ME 676** |
| Title of the Course | **Theory of Joining Processes** |
| Credit Structure | L-T- P-Credits<br>(2-0-2-3) |
| Name of the Dept. | Mechanical Engineering |
| Pre–requisite, if any | None |
| Scope of the Course | This course aims to teach the basics and advance science involved in the area of joining technology. The complete curriculum is designed to give broader information of the conventional and advanced joining techniques to metal, plastics and composites. Also, principles of solid-liquid phase, advanced solid state welding processes, theory and analysis of joining of polymeric composites, process selection, and its mechanical behavior. |
| Course Syllabus | **Module 1:** Joining processes- types of power source and their characteristics; characteristics of arc, mode of metal transfer, forces acting on a molten droplet; fluxes and coatings - type and classification. Study and analysis of heat flow, cooling rates, models for welding heat sources.<br>**Module 2:** Principles of solid and liquid phase welding processes; heat flow characteristics; gas metal reaction; and cooling of fusion weld. Heat flow - temperature distribution, cooling rates. Influence of heat input, joint geometry, plate thickness, preheat, significance of thermal severity number. Epitaxial growth: weld metal solidification, columnar structures, and growth morphology.<br>**Module 3:** Advanced joining techniques: Thermo-sonic ball bonding, High strain rate welding techniques: electromagnetic welding, explosive welding and vaporizing foil actuator welding and mechanical behavior of material during high strain rate impact welding and conventional welding: solid solution strengthening, grain boundary strengthening, and dispersion hardening.<br>**Module 4:** Joining of Plastics and Composites: Introduction to plastic & polymeric composites, part and joint design, and process selection. Mechanical method: snap fits, press fits, swagging, and stacking. |
| Suggested Books | 1. V.M. Radhakrishnan, **Welding Technology and Design**, New Age, 2019, ISBN 13: 978-8122440460<br>2. J. F. |---|---|
| **Course Code** | **ME 677** |
| **Title of the Course** | **Advance Thermodynamics** |
| Credit Structure | L-T-P-Credits<br>2-0-2-3 |
| Name of the Concerned Department | Mechanical Engineering |
| Pre–requisite, if any | Thermodynamics |
| Scope of the course | To inculcate various thermodynamics principles, systems and applications among engineering graduates |
| Course Syllabus | **Review of I and II Laws of Thermodynamics:** Concept of reversible work & irreversibility; Second law efficiency; Exergy change of a system: closed & open systems, exergy transfer by heat, work and mass, exergy destruction, exergy balance in closed & open systems.<br>**Exergy analysis of industrial systems**: power systems and refrigeration systems. Cycle analysis and optimization: Regenerative reheat Rankine cycle and Brayton cycle, combined cycle power plants, multi-stage refrigeration systems. Thermodynamic optimization of irreversible systems.<br>Finite-time thermodynamics principles, optimization studies of various thermal systems, Minimization of entropy generation principle.<br>**Properties of Gas Mixtures:** Equation of state and properties of ideal gas mixtures; Change in entropy on mixing; Partial molal properties for non-ideal gas mixtures. Thermodynamics of Reactive System.<br>**Conditions of equilibrium of a multiphase:** multicomponent system thermal and energy analysis; Second law applied to a reactive system; Condition for reaction equilibrium. Statistical-mechanical evaluation of thermodynamic properties of gases, liquids, and solids, Elementary kinetic theory of gases and evaluation of transport properties. Non-Equilibrium Thermodynamics of small scale systems. |

|---|---|
| Course Code | **ME 679/ ME 479** |
| Title of the Course | **Additive Manufacturing** |
| Credit Structure | L-T- P-Credits<br>(2-0-2-3) |
| Name of the Dept. | Mechanical Engineering |
| Pre–requisite, if any | Basic knowledge of different manufacturing processes |
| Scope of the course | To impart knowledge about philosophy of additive manufacturing (AM) which is one of the most important enablers of Industry 4.0 and evolution of different types of AM processes, state-of-art research in their field, capabilities, limitations, applications. |
| Course Syllabus | **1. Introduction:** Philosophy of additive manufacturing (AM) and its role in Industry 4.0; its advantages over subtractive, deformative and formative manufacturing processes; Evolution of different AM processes; classification of different AM processes (i.e. direct energy deposition (DED) or diffusion based processes, energy-beam based processes, arc-based processes, plasma-based processes, solid-state processes) and their comparative study; Different forms of deposition materials and their comparative study; Concept of track, layers, dilution, aspect ratio, different efficiencies in AM; Major application areas of AM processes including rapid prototyping (RP), rapid tooling (RT), rapid manufacturing (RM).<br>**2. Energy-beam based AM Processes:** Laser-beam based AM processes i.e. **s**elective laser sintering (SLS), direct metal laser sintering (DMLS), direct metal deposition (DMD), laser engineered net shaping (LENS), direct laser forming/fabrication (DLF), laser rapid manufacturing (LRM), laser metal wire deposition (LMWD); Electron-beam based AM processes.<br>**3. Arc-based AM processes:** AM processes using arc for deposition: manual metal arc (MMA) based, gas metal arc (GMA) based, gas tungsten arc (GTA) based, metal active gas (MAG) based, hybrid layered manufacturing (HLM)<br>**4. Transferred arc-based AM Processes:** Processes using arc for plasma formation: Plasma transferred arc (PTA) based, micro-plasma transferred arc (μ-PTA) based, plasma wire deposition (PWD), 3D micro-deposition (3DMD)<br>**5. Solid state AM Processes:** AM processes in which deposition material is not melted: Rotary friction-based deposition (RFD), Linear friction-based (LFD), Friction deposition (FD), Friction surfacing (FS), Friction assisted seam deposition (FASD), Friction stir based deposition (FSD).<br>**6. Advanced Topics:** Issues of dimensional and geometrical accuracy, surface finish, inter-layer bonding, microstructure, scaling of production, productivity, energy consumption, modeling, parametric optimization, and sustainability in AM.<br>**Practical classes** will be conducted for AM processes based on laser beam, micro-plasma transferred arc, and some AM processes based on arc. |

| Course Category | Core / Departmental Elective |
| Credit Structure | L - T - P - Credits<br>2-0-2-3 |
| Name of the Concerned Department | Department of Mechanical Engineering |
| Pre-requisite, if any | Nil |
| Scope of the course (Objectives) | The objective of this course is to understand the fundamentals of the laser application in manufacturing, involved physics, design functions and parametric constrains. |
| Course Outcomes | Engineering Knowledge: The fundamental of laser material processing and involved physics.<br>The role of laser and delivery systems to execute the different modalities of manufacturing.<br>Design of application-oriented laser systems and parametric control. |
| Course Content | **Lasers based Manufacturing:**<br>**Laser matter interaction;** Fundamentals of Lasers; Laser Beam Characteristics; Reflection or Absorption: Effect of Wavelength, Temperature, Surface Films, Angle of Incidence, Materials and Surface Roughness.<br><br>**Laser Cutting, Drilling and Piercing:** Introduction; Drilling Process Variations; Percussion and Single- or Double-shot Drilling; Trepanning, Helical Trepanning; Applications of Laser Drilling; Methods of Cutting - Vaporization Cutting/Drilling, Fusion Cutting – Melt and Blow, Reactive Fusion Cutting; Controlled Fracture; Scribing; Cold Cutting; Laser-assisted Oxygen Cutting – LASOX Process<br><br>**Laser Welding:** Introduction; Process Arrangement; Process Mechanisms – conduction, Keyholes and Plasmas; Operating Characteristics – Power, Spot Size and Mode, Wavelength, Speed, Focal Position, Joint Geometries, Gas Shroud and Gas Pressure; Arc- augmented Laser Welding,.<br><br>**Laser Surface Treatment:** Introduction; Laser Heat Treatment; Laser Surface Melting - Solidification Mechanisms; Surface Texturing; Laser Surface Alloying and Cladding; Particle Injection; Laser-assisted Cold Spray Process; Laser shock peening: physics, process and applications; Laser forming physics, process and applications; Laser based additive manufacturing, laser safety; |

| | |
|---|---|
| | **Laser systems for manufacturing**: Principles and working of $CO_2$ , Nd:YAG, fibre, Excimer, diode lasers; Optical Components - Lens Doublets, Collimators, Metal Optics; Graded-index Lenses; Laser Scanning Systems; Fiber Delivery Systems. ; Laser Machining; Arc-augmented Laser Cutting; System design for various modalities of the laser cutting and parametric control. Twin-beam Laser Welding, Walking and Spinning Beams; Laser Welding of Plastics; Various architecture designs for the laser welding systems. Laser based Additive Design of application-oriented laser systems and parametric control. |

| Pre–requisite, if any | None |
| Scope of the Course | To expose the students to the basics and different type of design used to performing experiments so that maximum outcome can be derived from it. |
| Course Syllabus | **Introduction to statistics:** Definitions and terminology; data classification and collection techniques; extraction of various features from collected data; frequency distributions; Variation; Concept of probability distribution.<br>**Introduction to Design of Experiments:** Objective and outcomes of Design of Experiments, Understanding basic design principles, Working in simple comparative experimental contexts; Issues and Principles of Design of Experiments; Guidelines for designing experiments.<br>**Simple comparative experiments:** Basic statistical concepts, Sample size calculation for two sample problems based on the t-test; assumptions underlying the t-test and how to test for these assumptions.<br>**Experiments with a Single Factor- One way ANOVA – in Completely Randomized Design (CRD):** Basics; Experiments with One Factor and Multiple Levels; Sample Size Determination; Multiple Comparison methods; The Optimum Allocation for the Dunnett Test, One-way Random Effects Models, The General Linear Test<br>**Blocking:** Concept of Blocking in Design of Experiment; Blocking Scenarios; Randomized Complete Block Design with and without Missing data; The Latin Square Design; Replicated Latin Squares; Crossover Designs; Incomplete Block Designs.<br>**The ($2^k$) Factorial Design:** Basics; Simplest case; Estimated Effects and the Sum of Squares from the Contrasts; Un-replicated $2^k$ Factorial Designs; Transformations. Confounding and Blocking in $2^k$ Factorial Designs; Blocking in an Un-replicated Design; Blocking in Replicated Designs; Alternative Method for Assigning Treatments to Blocks.<br>**2-level Fractional Factorial Designs:** Basics; Fractional Factorial Designs**;** Analyzing a Fractional Factorial Design**;** Foldover Designs; Plackett-Burman Designs.<br>**Analysis of Variance (ANOVA):** Basics; The 7 Step Process of Statistical Hypothesis Testing; ANOVA foundations; The ANOVA Model.<br>**Simple Linear Regression:** Basics; Common Error Variance; The Coefficient of Determination $r^2$; Hypothesis Test for the Population Correlation Coefficient; SLR Model Evaluation; SLR Estimation & Prediction;<br>**Experiments with Random Factors:** Random Effects Models; Two Factor Factorial with Random Factors; The Two Factor Mixed Models; Finding Expected Mean Squares; Approximate F Test.<br>**Evaluation of optimum parameters:** Basics; Evaluation of optimum parameters by using different optimization techniques**.** |

| **Course code** | **ME 764/ ME 464** |
| **Title of the course** | **Microrobotics** |
| Credit Structure | L - T - P - Credits<br>2-1-0-3 |
| Name of the Concerned Discipline | Mechanical Engineering |
| Pre-requisite, if any | NA |
| Scope of the course | The main objective of the course is to focus on the fundamentals of the physical laws that predominate at the micro scale for fabricating small device and bio-inspired microrobots |
| Course Syllabus | Scaling laws for designing macro, micro and nano systems: scaling laws in fluids, electo-magnetism, thermodynamics, optics and quantum effect. Micro-mechanics, design and selection of materials for micro-robotics systems, control for surface walkers. Introduction to different micro-fabrication techniques. Micro actuators and micro sensors: micro force sensors and tactile sensors, Magnetic actuation, electrostatic actuation, piezo electric actuation, shape memory alloy and conducting polymer based actuation, stick slip, comb drive actuator, micro-pumps, micro engines, magnetic helical micro machines, haptic interface and sensory skin for robotic systems Micro-manipulation: Mechanics of micro-manipulation, Atomic force microscope as micro/Nano robot, micro manipulation in particle assembly, 3D micro/Nano fiber pulling, integrated nano tool carrier, micro-assembly, micro air vehicles (MAVS) and multi robot systems. Bio- inspired micro-mechanics: Microscale propulsion, locomotion in liquids, modeling of propulsion systems, micro mechanical flying insect, Gecko inspired climbing robots, bio-inspired fibrillar adhesive, lizard inspired water runner robot, water strider inspired water walker robot, Magnetic swimming micro-robot for bio-medical application, medical micro-robots for endoscopy and other applications. |

# Course Structure of PG and Ph.D. Program

# in

# Civil Engineering

# and

# Syllabi of Courses

## Course Structure for M. Tech. (2 year), M. Tech. + Ph.D. Dual Degree in Structural Engineering (w.e.f. AY 2023-24)

**Minimum Educational Qualification (MEQ):** Four-year Bachelor's degree or five-year integrated degree (with first division as defined by the awarding Institute/ University for Indian applicants and equivalent to international applicants, as assessed by the Institute) in Civil Engineering. *Relaxation of 5% in qualifying degree is applicable for SC, ST and PwD category applicants.*

**Qualifying Examination (QE):**

(a) **International Students:** Valid score of TOEFL or IELTS, AND valid score of GRE

(b) **Indian Students:** Valid GATE qualification in Civil Engineering.

**Categories of Admission:**

**International Students:** (i) International self-financed (ISF) students; (ii) International students sponsored by non-government organizations or by a reputed industry (ISW); (iii) International students sponsored by a foreign government or its organizations or through mutual collaborative programs of India with other countries (GSW)

**Indian Students:** Teaching Assistantship (TA); (ii) Highly motivated sponsored candidate(SW) on full-time basis from highly reputed R & D organizations such as DRDO, ISRO, BHEL, C-DAC, ADE, ADA, etc. and highly reputed Industries; (iii) Defense Forces (DF): Candidates sponsored by the Defense Forces; (iv) Regular institute staff (IS) of IIT Indore on part-time basis only.

Candidates of SW, DF and IS categories will not be provided any scholarship.

**Duration of Program:** 2 years on full-time basis.

**Annual Intake:** 10 TA and no upper cap on the Non-TA students

### Course Structure for two-year Full-time M. Tech. (Structural Engineering)

**1st Year: Semester-I**

| Course code | Course Title | Contact Hours (L-T-P) | Credits |
|---|---|---|---|
| CE 601 | Mechanics of Composite Materials and Structures | 2-1-0 | 3 |
| CE 603 | Design of Steel-Concrete Composite Structures | 2-1-0 | 3 |
| CE 605 | Condition Monitoring and Reliability Assessment | 3-0-0 | 3 |
| CE 607 | Analysis and Design of Tall Buildings | 2-1-0 | 3 |
| CE 664/ CE 464* | Advanced Solid Mechanics | 2-1-0 | 3 |
| CE 651 | Structural Engineering lab | 0-0-6 | 3 |
| **Total minimum credits earned during the semester** | | | **18** |
| **Additional course (as per the requirement basis)** | | | |

| | | | |
|---|---|---|---|
| HS 641 | English Communication Skills | 2-0-2 | PP/NP |

**1st Year: Semester-II**

| Course code | Course Title | Contact Hours (L-T-P) | Credits |

| **Total minimum credits to be earned during the program** | | | **76** |

**Elective-I**

| Course code | Course Title | Contact Hours (L-T-P) | Credits |
|---|---|---|---|
| CE 628/ CE 428 | Theory of Plates and Shells | 2-1-0 | 03 |
| CE 630/ CE 430 | Elastic Stability | 2-1-0 | 03 |
| CE 612/ CE 412 | Sustainable Construction | 2-1-0 | 03 |
| CE 610/ CE 410* | Offshore Engineering | 2-1-0 | 03 |
| CE 632/ CE 432* | Plastic Analysis and Design | 2-1-0 | 03 |

*Existing courses to be cross-listed

In addition to the elective courses, students may also opt for PG courses offered by the otherDepartments at IIT Indore.

*NOTE: 1. Request for conversion from M.Tech. to M.Tech. + Ph.D. dual degree will be considered after evaluating the research potential of the promising and motivated PG studentsat the end of the third semester of their program.*

*2. If the student opts for the Dual Degree Program but cannot complete the requirements of a Ph.D., an exit option with the M.Tech. Degree can be earned at the end of the final semester ofthe normal M.Tech. Program by getting the M.Tech. Research project examined in the standardmanner as per the requirements for the award of an M.Tech. degree.*

**Course Structure of M. Tech. Program in Water, Climate and Sustainability**

**Minimum Educational Qualification:** Four-year Bachelor's degree or five-year integrated degree (with first division as defined by the awarding Institute/ University for Indian applicants and equivalent to International applicants, as assessed by the Institute) in Civil/Agricultural/ Infrastructure/Environmental/Geomatics Engineering. *Relaxation as per GoI norms in qualifying degree is applicable for SC and ST category applicants.*

*Qualifying Examination:*

a) **Indian students:** Valid GATE qualification in Civil Engineering (CE)/ Agricultural Engineering (AG)/ Environmental Science and Engineering (ES)/ Geomatics Engineering (GE)
b) **International students:** Valid score of TOEFL or IELTS or valid score of GRE.

*Categories of Admission:*

a) **Indian Students:** Teaching Assistantship **(TA)**; (ii) Highly motivated sponsored candidate **(SW)** on full-time basis from highly reputed R and D organizations, and highly reputed Industries; (iii) Defense Forces **(DF)**: Candidates sponsored by the Defense Forces; (iv) Regular institute staff **(IS)** of IIT Indore on part-time basis only.
b) **International Students:** (i) International self-financed **(ISF)** students; (ii) International students sponsored by non-government organizations or by a reputed industry **(ISW)**; (iii) International students sponsored by foreign government or its organizations or through mutual collaborative programs of India with other countries **(GSW)**

***Candidates of SW, DF and IS categories will not be provided any scholarship.***

- **Duration of Program:** 2 years on full-time basis.
- **Selection criteria:** GATE Score and/ or Interview (Valid GATE score compulsory for TA category)
- Total Intake: 10 (direct admission under TA category) + Sponsored candidates

| 2 | ZZ xxx | Elective-V + | x-x-x-3 |
| 3 | ZZ xxx | Elective-VI + | x-x-x-3 |
| 4 | CE 798* / CE 797* | Ph.D. Seminar Course | 0-2-0-2 |

Note

1. A Ph.D. student having **M.Tech./M.E./M.Phil.** qualification has to do one semester coursework (with 2-3 Ph.D. level courses). Minimum number of courses will be 2 Ph.D. level courses and one Ph.D. seminar course i.e. *(minimum coursework of 8 credits)*.

2. A Ph.D. student having **B.Tech./ B.E. / M.Sc. or equivalent qualification** admitted to Ph.D. Program in an **Engineering discipline** shall do 6-8 courses of at least 3 credits each and 1-2 Ph.D. Seminar courses of at least 2 credits each. Minimum number of courses will be 6 Ph.D. level courses and one Ph.D. seminar course *(minimum coursework of 20 credits).*

   * Ph.D. Seminar course can be taken either in Autumn or in Spring Semester or both as suggested by the Faculty Advisor/Thesis Supervisor.

**Electrical Engineering courses for Electives-I to VI**

*(in addition to these courses, students can also take courses from other disciplines)*

| Course Category | Core |
| Credit Structure | L-T-P-Credits<br>2-1-0-3 |
| Name of the Concerned Department | Department of Civil Engineering |
| Pre–requisite, if any | Nil |
| Course Objective | To understand the mechanics, analysis, and design of composite 2D structural elements. |
| Course Outcomes | • To be able to apply shear deformation models for analysis of composite structures.<br>• To be able to formulate geometrically nonlinear equilibrium equations of composite structural elements.<br>• To be able to formulate nonlinear code for hygrothermal analysis of composite structural elements. |
| Course Content | 1. Introduction of composites, constituent materials, constitutive relationships for varying stackings,<br>2. Nonlinear analysis of composite 2D structural elements,<br>3. Nonlinear hygrothermal analysis,<br>4. Shear deformation theories for composite structures,<br>5. Nonlinear numerical analysis of composite structures. |

| Title of the Course | **Design of Steel-Concrete Composite Structures** |
| Course Category | Core |
| Credit Structure | L-T-P-Credits<br>2-1-0-3 |
| Name of the Concerned Department | Department of Civil Engineering |
| Pre–requisite, if any | Nil |
| Course Objective | To develop an understanding of composite structures as applied to structural engineering. |
| Course Outcomes | • To be able to select the appropriate steel concrete composite system.<br>• To be able to analyse the steel concrete composite systems.<br>• To be able to design the steel concrete composite systems |
| Course Content | 1. Composite Systems: Materials, loadings, composite floor systems, composite building systems, methods of analysis.<br>2. Composite beams: Components and systems, fundamentals of composite action, shear connection, design for flexure, serviceability, prestressed beams.<br>3. Composite Columns: Types of composite compression members, behavior of composite columns, and special considerations.<br>4. Lateral Resisting Systems: Types of bracing, moment resisting frames, braced frames, shear-wall design, horizontal diaphragms,and joints.<br>5. Time-dependent effects: Creep, shrinkage, thermal effects. |

| **Course code** | **CE 612/ CE 412** |
| **Title of the course** | **Sustainable Construction** |
| Credit Structure | L-T-P-Credits<br>2-1-0-3 |
| Name of the Concerned Discipline | Civil Engineering |
| Pre-requisite, if any | Basic understanding of Building Materials and Building Construction |
| Scope of the course | This course aims to expose the students to the environmental challenges associated with the construction industry, and their management through the use of sustainable construction practices. This course will cover the use of alternate/green materials and the benefits associated with it. Students will also be exposed to emerging concepts like Life Cycle Assessment, Circular Economy, and Building Information Modelling. It is expected by the end of this course students will be able to understand and appreciate the concept of Sustainability in Construction Practices. |
| Course Syllabus | Sustainability in Construction: Concept of sustainability in construction, Carbon footprint, Embodied energy, Resource Management, Zero waste, 3R concept in construction<br><br>Waste Utilization in Construction: Circular Economy, Value addition, local materials, Supplementary Cementitious Materials, Blended Cements, Recycled Aggregates, Refuse Derived Fuel<br><br>Building Products: Fly Ash Bricks, Hollow Blocks, Precast Walls, Products for modular construction<br><br>Biomaterials: Bamboo, Straw Bale, Bio Cementing, Plant-based Natural Fibers, Durability of Bio-Based Building Materials<br><br>Green Building Design: Introduction to Green Building, Low Energy/ Energy Efficient Building Units, Landscape Management, Building Information Modelling (BIM)<br><br>Assessment Methods: Life Cycle Assessment (LCA), Leadership in Energy & Environmental Design (LEED), Green Rating for Integrated Habitat Assessment (GRIHA). |

| **Credit Structure** | L-T- P-Credits<br>2-1-0-3 |
| **Name of the Concerned Department** | Civil Engineering |
| **Pre–requisite, if any** | None |
| **Objectives of the course** | To understand different types of disaster, their forecasting, prevention and mitigation methods. The course is intended to create scientific awareness amongst graduates. |
| **Course Syllabus** | Terminology-Disaster;Hazard;Vulnnerability;Risk;disaster management. Types, Causes and Consequences- Geological, hydro-meteorological, biological, technological, anthropogenic, climate change and urban disasters. Disaster management cycle- pre-disaster (risk assessment, mapping, zonation, prevention and mitigation, early warning, preparedness, awareness); during disaster (evacuation, communication, search and rescue, command system, relief and rehabilitation); post disaster (damage and needs assessment, restoration, recovery, reconstruction, hyogo framework). Disaster Management in India – Disaster profile, disaster management act, national policy, national guidelines, role of government, role of agencies. Applications of Science and Technology- GIS, GPS, RS; Early warnings and communication; Planning and development; disaster safe designs; Institutions In India. |

|---|---|
| **Course code** | **CE 621** |
| **Title of the course** | **Water Quality and Treatment** |
| Course Category | Core |
| Credit Structure | L - T - P - Credits<br>2-0-2-3 |
| Name of the Concerned Department | Civil Engineering |
| Pre-requisite, if any | NA |
| Scope of the course (Objectives) | The course's goal is to increase student comprehension of the standards, requirements, effects, and treatment options related to water quality. It focuses on the causes and consequences of water contamination and the deterioration of water quality from a variety of sources. Also, it provides illustrations of each unit's procedures, their roles in the water-treatment process, and the fundamental tools that each procedure employs. |
| Course Outcomes | Engineering knowledge: Understanding the local, regional, and global water concerns will be made easier through this course, which will also increase students' knowledge of water quality.<br>Environment and sustainability: Analyze pollution level and its impacts on water quality through laboratory practices.<br>Design/development of solutions: The ability to choose, develop, and construct a suitable water treatment facility for a given locality and budget while adhering to set rules, specifications, and cost restrictions. |
| Course Content | **Theory**<br>1. Surface water quality, water quality in rivers and streams, water quality in lakes, impounded water bodies, groundwater quality, water quality standards, and drinking water safety in terms of microbiological and chemical quality. Case Studies<br>2. Water Purification Process in Natural Systems – Physical, chemical; biochemical processes; Response of streams to Bio-degradable organic waste.<br>3. Water Purification Process in Engineered Systems – Aeration; Solids Separation; Settling Operations; Coagulation; Softening; Filtration; Disinfection; Other water treatment Processes and Design Aspects.<br>**Laboratory**<br>4. Water quality monitoring & Testing; Cation / anion analysis; Nitrate/nitrite/carbonate; TDS, TSS, TOC; Biological Oxygen Demand; Chemical Oxygen Demand; Residual chlorine analysis; Metal analysis; Instrumental methods of pollutant analysis; Characterization of sludge sample.<br>5. Isolation and purification of Microbes from water samples; Media preparation; Microscopy; Staining and detection of microbes; Direct and indirect methods for enumerating microbes; Multiple tube fermentation technique; Membrane filter technique. |

| **Course code** | **CE 623** |
| **Title of the course** | **Glaciology** |
| Course Category | Program Elective |
| Credit Structure | L - T - P - Credits<br>2-1-0-1.5 |
| Name of the Concerned Department | Civil Engineering |
| Pre-requisite, if any | NA |
| Scope of the course (Objectives) | The course's goal is to provide a more in-depth and quantitative understanding of glacial processes and the link between weather/climate and glaciers. The interplay of snow, ice, and climate, mass balance modeling, temperature in glaciers, glacier hydrology, and glacier dynamics are all covered in the course. |
| Course Outcomes | • Conduct investigations of complex problem<br>• Demonstrate the knowledge and need for sustainable development. |
| Course Content | • Introduction: Glaciers, Cryosphere, snow, ice sheets and sea ice; and characteristics.<br>• Glacier dynamics and Mass balance: Overview of glacier dynamics, ice flows, calving and glacier instabilities; glacier mass budget. Glacier mass balance gradient and glacier mass balance profile.<br>• Glacial hazards: Glacier length and mass changes, ice avalanches, and surging glaciers<br>• Glacier meteorology: Ice cores and paleoclimate, Melting glaciers and sea level rise, Permafrost and its features; Response to changing climate, Ice age theories, and Current issues and possible adaptations.<br>• Energy balance over snow and glaciers: Interaction of solar radiations with atmosphere, snow and ice.<br>• Snow and glacier hydrology |

| Course Code | **CE 628/ CE 428** |
| Title of the Course | **Theory of Plates and Shells** |
| Course Category | Departmental Elective |
| Credit Structure | L-T-P-Credits<br>2-1-0-3 |
| Name of the Concerned Department | Department of Civil Engineering |
| Pre–requisite, if any | Nil |
| Course Objective | To understand the basic concept, mathematical modeling,behavior and analysis of plate and shell structures. |
| Course Outcomes | • To be able to compute stresses and strains on thin plates and shells.<br>• To be able to formulate the buckling loads of plates and shells.<br>• To be able to formulation finite element code for solution of plate and shell equations. |
| Course Content | 1. Thin plates and shells - Kirchoff theory, strains and stresses, constitutive relations, equilibrium equations, buckling, and numericalsolutions.<br>2. Thick plates and shells - Reissner-Mindlin-Naghadi theories, shear correction factors, equilibrium equations, buckling, and numerical solutions.<br>3. Membrane and bending theories; shallow shell theory; equilibrium equations for simple shell forms considering membrane.<br>4. Finite Element formulations of plate and shell elements. |

|---|---|
| **Title of the course** | **Numerical Methods in Civil Engineering** |
| Credit Structure | L - T - P - Credits<br>2-1-0-3 |
| Name of the Concerned Discipline | Civil Engineering |
| Pre-requisite, if any | NA |
| Scope of the course | This course is designed for mainly engineering students to enhance their numerical techniques. In engineering, many complex problems do not have explicit analytical solutions, and in these cases, numerical techniques are extremely beneficial. In addition to providing basic numerical strategies, this course introduces some advanced concepts for solving non-linear differential and integral equations, which are expected to be helpful in B.Tech., M.Tech., and Ph.D. thesis works. |
| Course Syllabus | Computer applications in Civil Engineering, typical problem categories, techniques for linear problems, techniques for nonlinear problems. Iterative solutions for linear and non-linear systems. Algorithms in time domain using Runge - Kutta methods. Newmark B-method and finite-difference approaches, concept of stability of algorithm, propagation of errors in different algorithms. Numerical Differentiation, Difference operators (forward, backward and central difference). Stability and accuracy of solutions. Application of finite difference operators to solve initial and boundary value problems. Numerical solutions of integral equations, Types of integral equations. Fredholm integral equations of the first and second kind. Fredholm_s Alternative theorem. Collocation and Galerkin methods for solving integral equations. Use of commercial software for Civil Engineering Problems. |

| Credit Structure | L - T - P - Credits<br>2-1-0-3 |
| Name of the Concerned Discipline | Civil Engineering |
| Pre-requisite, if any | NA |
| Scope of the course | The course aims to provide an overview of global water and climate change including socioeconomic issues. The course will provide an introduction to the global challenges of achieving water security in the context of sustainable development and policies, illustrated through case studies. The course is designed for undergraduate and graduate students interested in water management and climate changes issues. |
| Course Syllabus | Review of climate change aspects, Introduction to ecosystem services, importance of water availability for crop water production, basic principles of irrigation under climate change, water- climate-energy nexus, importance of groundwater management, Drought-types and index used, significance and roles of sustainability, Sustainability of river and ground water resources, resilience of hydrologic systems, simulation and modeling through case studies, socio- economic consideration, adaptation, Review of water policies, Framework of water policies in consideration of supply and demand. |

|---|---|
| **Course code** | **CE 496/ CE 696** |
| **Title of the course** | **Safety of Dams and Reservoirs** |
| Credit Structure | L-T-P-Credits<br>2-1-0-3 |
| Name of the Concerned Discipline | Civil Engineering |
| Pre-requisite, if any | Basic knowledge of water resources engineering |
| Scope of the course | The non-availability of water in the right place at the right time has lead the civilization to store surplus water in man-made reservoirs by constructing dams-large barriers in the flow path of rivers. Historically, these reservoirs have been used to supply water for drinking purposes, agriculture, and to generate hydroelectricity. Although vital assets, the management of such large water resources systems remains challenging.<br><br>Dam failures pose significant threats to life, environment, and the local economy. Such failures may result from multiple reasons, large-magnitude floods being the most common and perhaps the least predictable. Over the last few decades, studies have found increasing trends in the frequency and magnitude of floods over the globe. The situation is expected to exacerbate with the changing climate over the next few decades.<br><br>The aim of the course is to provide basic knowledge to manage and safeguard dams and reservoirs. This course provides introductory technical aspects of planning, design, operation, and maintenance of dams and reservoirs. In addition, topics covering risk management under a changing climate are introduced. |
| Course Syllabus | Introduction to planning, design, operation and maintenance of dams and reservoirs.<br><br>Types of dams; causes of dam failures, flood failures and overtopping, backwater flooding, breaching, slope failure, internal erosion and shear stress in foundations.<br><br>Principles of design of dams: Design flood, probable maximum floods, geologic and seismological considerations, stability analyses, environmental considerations.<br><br>Uncertainty, risk, reliability, and resilience analyses of dams and reservoirs.<br><br>Operation of dams: Modelling dam and reservoir systems. Rule curves and forecast-based policies, a brief introduction to optimization models. Design and operational challenges under a non-stationarity climate.<br><br>Maintenance of dams: Silt and scouring, monitoring and instrumentation; Repair, rehabilitation, and removal of dams. |

# Course Structure of
# PG and Ph.D. Program in
# Metallurgy Engineering and Material Science
# (Earlier referred as *Surface Engineering*)
# and Syllabi of Courses

**Course Structure for M.Tech. / M.Tech. + Ph.D. Dual Degree Program in Materials Science and Engineering (from AY 2015-16 to AY 2018-19)**

**Minimum Educational Qualification:** Four-year Bachelor's degree or five-year integrated degree (with first division as defined by the awarding Institute/ University for Indian applicants and equivalent to International applicants, as assessed by the Institute) either in Mechanical/ Electrical/ Electronics/ Chemical/ Metallurgy/ Materials Science/ Automobile Engineering or M.Sc. in Chemistry/ Physics/ Material Science or Applied Electronics/ equivalent. *Relaxation of 5% in qualifying degree is applicable for SC and ST category applicants.*

**Qualifying Examination:**
**(a) International Students:** Valid score of TOEFL or IELTS, AND valid score of GRE
**(b) Indian Students:** Valid GATE/ CSIR-JRF qualification in relevant areas.

**Categories of Admission:**
**(a) International Students:** (i) International self-financed **(ISF)** students; (ii) International students sponsored by non-government organizations or by a reputed industry **(ISW)**; (iii) International students sponsored by foreign government or its organizations or through mutual collaborative programs of India with other countries **(GSW)**
**(b) Indian Students:** Teaching Assistantship **(TA)**; (ii) Highly motivated sponsored candidate **(SW)** on full-time basis from highly reputed R & D organizations such as DRDO, ISRO, BHEL, C-DAC, ADE, ADA, etc. and highly reputed Industries; (iii) Defense Forces **(DF)**: Candidates sponsored by the Defense Forces; (iv) Regula institute staff **(IS)** of IIT Indore on part-time basis only.
***Candidates of SW, DF and IS categories will not be provided any scholarship.***
**Duration of Program:** 2 years on full-time basis.

**@** In addition to this course list, a student can also opt from the PG courses being offered by other disciplines.

**NOTE:** 1. Request for conversion from M.Tech. to M.Tech. + Ph.D. dual degree will be considered after evaluating the research potential of the promising and motivating PG students at the end of the **third semester of their program.**

2. If the student moves to the Dual Degree Program, but cannot complete the requirements of a Ph.D., an **exit option** with the M.Tech. degree can be earned at the end of the final semester of the normal M.Tech. Program by getting the M.Tech. Research Project examined in the standard manner as per the requirements for the award of an M.Tech. degree.

3.The enhancement in the scholarship from M.Tech. to Ph.D. will be from the beginning of the fifth semester or from the date on which all requirements for the award of M.Tech. degree are fulfilled, whichever is later.

**Course Structure of M.Tech. / M.Tech. + Ph.D. Dual Degree Program in Materials Science and Engineering (from AY 2019-20 onwards)**

**Minimum Educational Qualification:** *"Four-year bachelor's degree or five-years integrated degree (with the first division as defined by the awarding Institute/University for Indian applicants and equivalent to International applicants, as assessed by the institute) in Materials Science/ Physics/ Chemistry/ Nanoscience/ Nanotechnology/ Engineering Science/ Engineering Physics/ Metallurgy Engineering or two years master's degree in Chemistry/ Physics/ Material Science/ Nanoscience/ Nanotechnology."*

Relaxation of 5% in qualifying degree is applicable for SC and ST category applicants.

**Qualifying Examination:**
**(a) International Students:** Valid score of TOEFL or IELTS, AND valid score of GRE
**(b) Indian Students:** Valid GATE/ CSIR-JRF qualification in relevant areas.

**Categories of Admission:**
**(a) International Students:** (i) International self-financed **(ISF)** students; (ii) International students sponsored by non-government organizations or by a reputed industry **(ISW)**; (iii) International students sponsored by foreign government or its organizations or through mutual collaborative programs of India with other countries **(GSW)**
**(b) Indian Students:** Teaching Assistantship **(TA)**; (ii) Highly motivated sponsored candidate **(SW)** on full-time basis from highly reputed R & D organizations such as DRDO, ISRO, BHEL, C-DAC, ADE, ADA, etc. and highly reputed Industries; (iii) Defense Forces **(DF)**: Candidates sponsored by the Defense Forces; (iv) Regula institute staff **(IS)** of IIT Indore on part-time basis only.
**Candidates of SW, DF and IS categories will not be provided any scholarship.**

**Duration of Program:** 2 years on full-time basis.

**NOTE:**

- A Ph.D. student having **M.Tech./ME//MPhil** qualification has to do one semester coursework (with 2-3 Ph.D. level courses) Minimum number of courses will be 2 Ph.D. level courses and one Ph.D. seminar course i.e. *(minimum coursework of 8 credits)*.
- A Ph.D. student having **M.Sc./ B.Tech./ BE** or equivalent qualification has to do 6 to 8 Ph.D. level courses of at least 3 credits each and 1-2 Ph.D. seminar courses of at least 2 credits each. Minimum number of courses will be 6 Ph.D. level courses and one Ph.D. seminar course *(minimum coursework of 20 credits).*

* Ph.D. Seminar course can be taken either in Autumn or in Spring Semester or both as suggested by the Faculty Advisor/Thesis Supervisor.

| Course Code | **MM 605/ MM 405** |
| Title of the Course | **Green Hydrogen: Materials and Technologies** |
| Credit Structure | L-T-P-Credits<br>2-1-0-3 |
| Name of the Concerned Discipline | Metallurgy Engineering and Materials Science |
| Pre-requisite, if any | Fundamental knowledge of materials science, materials synthesis/fabrication, materials characterization and electrochemistry |
| Scope of the Course | The course provides the learning on various aspects of green hydrogen energy: fundamentals of materials and technologies for green hydrogen production, storage and its applications. |
| Course Syllabus | **1. HYDROGEN ENERGY OVERVIEW:** Green hydrogen in global energy scenarios.<br>**2. METHODS AND TECHNOLOGIES FOR GREEN HYDROGEN PRODUCTION:** Water-electrolysis: mechanisms of oxygen evolution reaction and hydrogen evolution reaction. Solar driven water splitting: photocatalytic & Photoelectrochemical, Biological and bio-electrochemical, Thermochemical, Electrolyzer Technologies: alkaline water electrolyser, proton exchange membrane, solid oxide electrolyzer, anion exchange membrane, proton conducting ceramic.<br>**3. MATERIALS FOR GREEN HYDROGEN PRODUCTION**: Catalytic materials based on different electrolyzer technologies, solar driven water splitting, thermochemical and bio electrochemical water splitting. Materials challenges and research scope.<br>**4. HYDROGEN STORAGE**: Physical storage technologies, Materials storage: metal hydrides, metal alanates, amino borane, metal amides, amine metal borohydrides, chemical hydrogen storage, carbon materials, nanostructured adsorbents. |

|---|---|
| Course Code | **MM 644** |
| Title of the Course | **Integrated Computational Materials Engineering (ICME)** |
| Credit Structure | L-T-P-Credits<br>2-0-2-3 |
| Name of the Concerned Discipline | Metallurgy Engineering and Materials Science |
| Pre–requisite, if any | Computational techniques in Materials Engineering |
| Scope of the Course | The scope of this course is introduce the student the multiscale aspects (both in space and temporal) of an engineering problem. Students will be exposed to the computational techniques and the ways to bridge the results obtained at different scales. |
| Course Syllabus | **Introduction:** ICME history and overview, Multiscale aspects of materials, Creating new materials/structure/component, case studies. Introduction to numerical techniques, Different boundary conditions: Dirichlet, Neuman and Periodic Boundary conditions, Stability criterion; **First Principle method**: Electronic structure method: Quantum mechanics of multi-electron systems, Early density functional theories, The Hohenberg-Kohn theorem, Kohn-Sham method, Exchange-correlation functional, wave functions, Pseudopotentials, Use of density functional theory; **Molecular Dynamics (MD):**Molecular dynamics of soft spheres: Interaction potentials and forces, Integrating the equations of motion: Verlet algorithm, Molecular dynamics in materials research; **Monte-Carlo (MC) method**: Ensemble averages, The Metropolis algorithm, The Ising model, Monte Carlo for atomic systems, Other ensembles, Time in Monte Carlo simulation, Assessment of the Monte Carlo method, Uses of the Monte Carlo method in materials research; **Dislocation Dynamics (DD):** Introduction to dislocation dynamics theory: bridging from MD; **Crystal Plasticity (CP):** Crystal plasticity theory: Introduction, Crystal plasticity: Kinetics, bridging from DD and model correlation, Running rate dependent single and poly crystalline CP; **Phase Field Modeling:** Introduction: Phase-Field Method and Its Formalisms, Classical diffusion equation and its Failure, Analytical and Numerical solution of Diffusion equation, Cahn-Hilliard equation: Simulation of the spinodal decomposition, Allen-Cahn Equation: Order-Disorder phase transformation, Phase Field Modelling of Solidification: dendritic solidification, Multiple Phase Fields and Order Parameters: Case studies, Outlook on various aspects of phase-field modeling; **Finite element method**: Introduction: Heat transfer problem, Fluid flow problem, Stress analysis. Stress-strain relation, Constitutive equation, deformation behavior of materials: temperature, strain field distribution. |

| 4. | Name of the Concerned Discipline | Metallurgy Engineering and Materials Science |
| 5. | Pre–requisite, if any | Computational techniques in Materials Engineering, Advanced structural and mechanical metallurgy |
| 6. | Scope of the Course | The course is intended to discuss the Multiphysics aspects of an engineering problem. The coupling phenomena such thermos-mechanical, electro-mechanical and electro-thermal problems will be discussed in detail. |
| 7. | Course Syllabus | Introduction to continuum mechanics: REV; Cauchy Stress tensor; Strain tensor, strain rate, material and spatial derivatives; General principles, continuity equation, momentum and energy principles, mass-momentum and energy transport theorems;<br>Thermo-Elasticity: Classical elasticity, Generalized Hooke's law, isotropy, thermal stresses and strain, stress concentration, Boundary value problems, Introduction to thermo-Electromagneto-mechanical coupling: Joule effect, linear piezoelectricity, Maxwell stress tensor;<br>Heat Transfer: The three modes of heat transfer: conduction, radiation, convection. Phenomenological approach to the heat transfer coefficient: coupling between conduction and convection. Steady-state heat conduction. Fin approximation. Ideal and infinite fins. Unsteady conduction. Characteristic times and lengths, dimensional analysis, Fourier and Biot numbers. Convective heat transfer: Dimensional approach to forced convection. Notions of mechanical and thermal boundary layers. Reynolds, Prandtl and Nusselt numbers. Laminar-turbulent transition. Standard cases (tube, flat plate) of internal and external convection in the fully developed regime. |

| 6. | Scope of the Course | There are various types of steels which are evolved through the requirements of the engineering components. Steel production is expected to grow significantly in India. Therefore, the country needs manpower having good knowledge in iron and steel-making. This course deals with technological and physical-chemical aspects of various iron and steel making processes. |
| 7. | Course Syllabus | Treatment of iron ores: Agglomeration, sintering and pelletization. Coke making. Dissection of quenched blast furnace and its study in detail, flow of gas, liquid and solid in the various parts of the blast furnace. Physical chemistry of blast furnace reactions, thermodynamic equilibria, chemical and thermal reactions zones, Reactions in stack, bosh and hearth, thermal efficiency, mass and enthalpy balances, gas flow, burden distribution and cohesive zone formation in BF. Kinetics of iron oxide reduction and carbon gasification. Silicon transfer mechanism to hot metal, slagless steelmaking. Alternative iron making processes: Mini-blast furnace, COREX process, low shaft furnace, electro thermal processes, Directly reduced iron (DRI). Primary steel making. Thermodynamics and kinetics of steel making reactions, Theoretical analysis of refining reactions. Gas injection in steel making vessels. Theory of steel making slags. Arc Furnace practices for Carbon and Low Alloy Steels. Secondary steel making and its application to production of special and alloy steel. Fundamental and practical aspects of Injection Metallurgy. Advanced features of Continuous Casting. Application of modeling and simulation in steel making. |

| 4. | Name of the Concerned Discipline | Discipline of Metallurgy Engineering and Materials Science |
| 5. | Pre-requisite, if any | None |
| 6. | Scope of the Course | Solidification processing is considered as one the most important processing technique used by engineers to manufacture structural and functional components in automobile and electronic industries. More than 90% of all metallic materials used in daily human life are synthesized from the liquid state as their parent phase. This course is intended to make the students familiar with the science and technology of solidification processing of materials, undercooled metallic melts, as well as phase field modelling of microstructure development. |
| 7. | Course Syllabus | Heat transfer in solidification, continuous and ingot casting processes, structure of castings and ingots, defects in casting, macro- and micro-segregation and homogenization, design of risering and gating in castings. Thermodynamics of solidification, nucleation and growth, Gibbs-Thomson effect, anisotropy and faceting, directional solidification-growth of single crystals. Alloy solidification, mathematical analysis of solute redistribution during solidification: Solidification at equilibrium and non-equilibrium condition. Scheil and Flemings solidification model, Stability of interface and constitutional undercooling, Mullins-Sekerka criterion, Cellular and dendrite growth. Physics of dendritic growth: Ivantsov's transport model and solution, Marginal stability hypothesis, Free dendritic theories: Lipton-Glicksman-Kurz (LGK) theory, Lipton-Kurz-Trivedi (LKT) theory, Microscopic solvability (M.S.) theory. primary and secondary dendrite arm spacing, Rayleigh instability. Solidification microstructures of multiphase alloys such as eutectic, peritectic and monotectic alloys, coupled growth and phase selection, rapid solidification processing, phase selection kinetics in undercooled metallic melt. Phase field modeling for microstructure evolution during solidification. |

|---|---|
| **Course code** | **MM 650/ MM 450** |
| **Title of the course** | **Ferrous and Non-Ferrous Alloys** |
| Credit Structure | L - T - P - Credits<br>2-1-0-3 |
| Name of the Concerned Discipline | Metallurgy Engineering and Materials Science |
| Pre-requisite, if any | Fundamentals of materials science |
| Scope of the course | This course introduces students to the advanced alloys and develops literacy about the technologically important alloy-systems used in automotive, aerospace and nuclear industries. This course implicates the fundamental concepts in the metallurgy of the advanced alloys. |
| Course Syllabus | Ferrous alloys: Alloy Steels – General Introduction, Maraging Steels (Heat-treatment Cycle, Aging behavior), High-Strength Low-Alloy Steels (Role of Microalloying of Steels), Ultra-High Strength Steels (Role of Alloying Elements), Dual-Phase Steels, Stainless Steels (Fe-Cr-Ni System, Schaeffler Diagram, Precipitation of Carbides/Nitrides, Microstructural Aspects of Various Types of SS, Ni-free Duplex SS, Embrittlement Phenomena), Tool Steels (Secondary Hardening, Types of Carbides), TRIP-assisted Steels (Microstructural evolution, Stress induced transformation, Role of alloying elements, Factors affecting performance, Concept of &#948_-TRIP Steel), Bearing Steels (Metallurgical & Engineering Requirements of Steel, Microstructural Aspects, Microcracking, Spheroidise Annealing, Inclusions, Aerospace Bearings), IF Steels. Non-ferrous alloys: Nickel-Based Superalloys (Microstructural features, Role of Alloying Elements, Strengthening Mechanisms, Heat-Treatments, Dispersion-Hardened Superalloys), Titanium Alloys (Deformation Modes, Effect of Alloy Addition on Phase Diagrams, Alloy Classification, Phase Transformations, Microstructures, Hardening Mechanisms of Alfa- & Beta- Phases, Microstructure in Dependent of Processing, Basic Correlation between Microstructure & Mechanical Properties, Ti-based Intermetallic Compounds), Aluminum Alloys (Microstructures of Al-Si Alloys, Modified/Unmodified Al-Si Alloys, Aging Process in Al-4%Cu alloy), Brass, Bronze. Special alloys: Bulk Nanostructured Steels – the Latest Development in Steels, Mechanically Alloyed Metals, Shape Memory Alloys, Metallic-glass Forming Alloys, Nuclear Power Plant Alloys (Irradiation Damages in Microstructure, Irradiation Hardening, Concepts of ODS Steels). |

| 3. | Credit Structure | L-T-P-Credits<br>2-1-0-3 |
| 4. | Name of the Concerned Discipline | Discipline of Metallurgy Engineering and Materials Science |
| 5. | Pre–requisite, if any | None |
| 6. | Scope of the Course | This course is designed for the students of science and engineering disciplines to understand the use of nanomaterials in the advancement of energy storage devices. Potential of nanomaterials will be detailed for the significant enhancement in functionality of electrochemical devices. The basics of electrochemical devices and cutting edge research developments will be covered from various books, research reports, articles and review papers. |
| 7. | Course Syllabus | Introduction to nanomaterials, Overview of the basic characteristic differences between nanomaterials and conventional materials, Overview of the types and architectures of nanomaterials with relevance to the applications in energy storage/conversion devices, Electrochemical interfaces at the nanoscale.<br>**Characteristics and properties**: Effects of crystal structures, orientations, various dimensions, and aspect ratio at nano/micro scales, Morphological and structural stability during operation, Issues of diffusivity, Importance of chemical, physical and mechanical properties.<br>**Devices**: Importance, working principles, characterization, and fabrication of advanced electrochemical energy storage and conversion devices like Electrochromic Smart windows, Supercapacitors, Li/Na-ion batteries, and fuel cells, etc.<br>**Nanomaterials for devices**: Beneficial aspects of nanomaterials to improve device performance, Nanomaterials used and problems associated in electrochemical energy storage and conversion devices, Possible ways to overcome limitations, Potentials of nanostructures/nanomaterials for further significant enhancement in functionality. Present scenario and necessities of efforts on fabricating of nanomaterials for designing aforesaid applications. |

| 3. | Credit Structure | L-T-P-Credits<br>2-1-0-3 |
| 4. | Name of the Concerned Discipline | Metallurgy Engineering and Materials Science |
| 5. | Pre–requisite, if any | Nil |
| 6. | Scope of the Course | This course will serve as an introduction to soft materials for students which is highly interdisciplinary area of chemistry, overlapping with topics in physics, biology, materials science and engineering. Soft materials have attracted attention due to wide applicability and importance in the chemical industries, pharmaceuticals, consumer products, food and cosmetics.<br>The course will illustrate the broad overview of design, synthesis, characterization, properties, recent advancements and potential applications of soft materials. |
| 7. | Course Syllabus | Introduction, definition, classifications of soft materials: gels and colloids. Gels: hydrogel, metallogels, organic gel and xerogels. Methods and materials selection for gel synthesis, characterization, multi-responsive behavior with special emphasis on thermal, mechanical, redox, pH and light. Reversible and irreversible physical gels; shape memory gels. Rheology of gels and colloids. Applications of gels in biology, pharmaceuticals, consumer, food, cosmetics and electronics. Colloids: Classification, preparation and purification, properties, DVLO theory, electro kinetic and physical properties. Determination of size of colloidal particles involving microscopy, scattering (ILS, DLS, x-ray, neutron), micelles, emulsions and membranes. Surface tension, adsorption and surface activity, micelles formation and colloids examples and applications. |

| | | |
|---|---|---|
| 1. | Course Code | **MM 671** |
| 2. | Title of the Course | **Dynamic Behavior of Materials** |
| 3. | Credit Structure | L-T-P-Credits<br>2-1-0-3 |
| 4. | Name of the Concerned Discipline | Metallurgy Engineering and Materials Science |
| 5. | Pre–requisite, if any | Advanced structural and Mechanical Metallurgy |
| 6. | Scope of the Course | Many of the engineering components, often undergo dynamic loading condition during their service e.g. car crash, high speed machining, a bullet impacting an armour plate or space debris impacting a satellite. The materials response under dynamic loading conditions is completely different from the quasi-static loading conditions. This course intends to discuss the mechanics and mechanisms of materials under dynamic loading conditions. |
| 7. | Course Syllabus | Introduction to materials and dynamic events; Stress waves in solids: Uniaxial stress and strain waves, three dimensional wave propagation, guides waves; Experimental techniques for high strain rate testing: Impact testing, split-Hopkinson bar testing, plate impact tests, dynamic fracture tests; Plastic deformation under high strain rate loading conditions, Adiabatic shear localization, Constitutive descriptions for polymers, Dynamic fracture; Applications. |
| 8. | Suggested Books | 1. M. Andre,J. Meyers, **Dynamic Behaviour of Materials**, Wiley, 1994, ISBN: 9780471582625.<br>2. W.W. Chen, B. Song, **Split Hopkinson (Kolsky) Bar: Design, Testing and Applications**, Springer, 2011, ISBN: 9781441979827.<br>3. K. T. Ramesh(edited by Sharpe Jr., N. William), **High Strain Rate and Impact Experiments**, Springer Handbook of Experimental Solid Mechanics, 2008, ISBN: 9780387343624. |

| | | |
|---|---|---|
| 1. | Course Code | **MM 673** |
| 2. | Title of the Course | **Science of Ceramics** |
| 3. | Credit Structure | L-T-P-Credits<br>2-1-0-3 |
| 4. | Name of the Concerned Discipline | Metallurgy Engineering and Materials Science |
| 5. | Pre–requisite, if any | None |
| 6. | Scope of the Course | The objective of the course is to cover the entire spectrum of topics related to ceramics i.e., from crystal structure, defect structure, and processing of the ceramics and various structural and functional propertied of ceramics. |
| 7. | Course Syllabus | Introduction: oxide and non-oxide ceramics, their chemical formulae, crystal and defect structures, non-stoichiometry and typical properties. Powder Preparation: Physical methods (different techniques of grinding), chemical routes - co-precipitation, sol-gel, hydrothermal, combustion synthesis, high temperature reaction (solid state reaction). Basic principles and techniques of consolidation and shaping of ceramics: powder pressing- uniaxial, biaxial and cold isostatic and hot isostatic, injection moulding, slip casting, tape-casting, calendaring, multi-layering. Sintering: different mechanisms and development of microstructure (including microwave sintering); Preparation of single crystal, thick and thin film ceramics; Mechanical behavior: fracture mechanics and tribology; Engineering applications: at room and high temperatures (including armor application); Electrical behavior: insulating (dielectric, ferroelectric, piezoelectric, pyroelectric) semiconducting, conducting, superconducting and ionically conducting, specific materials and their applications; Magnetic behavior: basic principles, materials and their applications; Transparent ceramics, coatings and films: preparation and applications; Porous ceramics and ceramic membrane: fabrication techniques and applications in separation technology; Bio-medical applications of ceramic materials; Ceramics for energy and environment technologies (fuel cell, lithium battery, gas sensor and catalytic support); Ceramics matrix composites: different types, their preparation and properties (including nano-composites); Exotic ceramics: functionally graded, smart/ Intelligent, bio-mimetic and nano-ceramics - basic principles, preparation and applications |
| 8. | Suggested Books | 1. M. W. Barsoum ,**Fundamental of Ceramics**, McGraw Hill, 1997, ISBN:9780750309028.<br>2. D. W. | | |
|---|---|
| **Course code** | **MM 676** |
| **Title of the course** | **Advance Computational Methods for Materials** |
| Credit Structure | L - T - P - Credits<br>2-1-0-3 |
| Name of the Concerned Discipline | Metallurgy Engineering and Materials Science |
| Pre-requisite, if any | Basics of Quantum Mechanics, Statistical Mechanics, Solid State Physics and Material Science. |
| Scope of the course | This course intends to introduce a variety of theoretical and computational methods used in different fields of materials science as well as green energy applications. This course uses the theory and application of atomistic computer simulations to model, understand, and predict the properties of real materials. The course provides the student with deepened knowledge and understanding of computational material science and engineering. |
| Course Syllabus | A brief introduction of quantum theory, Hartree-Fock and post-Hartree-Fock theory, Introduce energy models from classical and first-principles approaches, Local Density Approximation (LDA), Local (Spin) Density Approximation (LSDA), Hybrid Density Functional theory (DFT), Generalized Gradient Approximation (GGA). Advanced theories and Computational methods, Dispersion-corrected DFT (DFT-D), van der Waals forces, Kohn-Sham DFT, Exchange-Correlation parameters, Meta-GGA, Limits of current implementations of DFT, Møller–Plesset perturbation methods, Monte Carlo (MC), quantum Monte Carlo (QMC), and grand canonical Monte Carlo (GCMC) simulations, molecular dynamics (MD), Description of variational Monte Carlo (VMC) and diffusion Monte Carlo (DMC) theories. Introduction of periodic DFT-D methods, Atomistic Modeling of materials, Multiscale Modeling technique, Thermodynamics of crystalline solids and porous materials, Quantum theory of the harmonic crystal and anharmonic effects in crystals, Applications of the periodic DFT-D methods in green energy resources, 2D layer structure materials, Transition Metal Dichalcogenides (TMDs), Graphene, and Renewable Energy Materials. |

| Scope of the course | This course is designed for the students of science and engineering disciplines to understand the use of High pressure for materials synthesis and properties studies under high pressure. This course provides new insight for basic, applied and industrial applications. |
| Course Syllabus | Introduction to High Pressure Materials Synthesis Technique and basic principles, Pressure effects in material synthesis and physics/science behind it, Comparison of solid-medium and gas-medium pressure techniques, Solid-medium ultra-high-pressure low-temperature O2 annealing, Gas-medium high-pressure synthesis. High Pressure Materials Synthesis Techniques: Encapsulation techniques, Shock-wave methods, Diamond-anvil cells, Cubic Anvil and Belt type. Synthesis of Novel Materials under high pressure: General features of high-pressure processes, calibration of parameters etc., High Pressure synthesis of Mechanical Materials and new layered structures, Polymers etc. Application of high-pressure techniques: magnetic materials, diamonds, gems, Wide band gap semiconductors, Electronic and Optical Materials, etc. |

|---|---|
| **Title of the course** | **Applied Photoelectrochemistry** |
| Credit Structure | L - T - P - Credits<br>2-1-0-3 |
| Name of the Concerned Discipline | Metallurgy Engineering and Materials Science |
| Pre-requisite, if any | Basic knowledge of Semiconductors, Optoelectronic Properties and Electrochemistry |
| Scope of the course | The course is designed to provide the fundamentals knowledge of Photoelectrochemistry and its application in solar light harvesting. The student would get comprehensive understanding on phenomenon's that are occurring at the interface of semiconductor and electrolyte. To introduce the nanostructure photoelectrode and their impact as well as recent advancement in semiconductor photoelectrodes. |
| Course Syllabus | 1. Introduction: Electrochemistry and Electrochemical Cells, Electrodes: Anode and Cathode, Equilibrium Potential of Electrode Reactions, Cathodic and Anodic Reactions, Electrode Reactions in Electron Transfer.<br>2. Semiconductor Photoelectrodes: Electron Energy Bands of Semiconductors, Chemical Potential and Electrochemical Potential, Graphical Representation of Energy Levels, Theory of Junction Formation, Metal-Schottky Junction, Semiconductor– Electrolyte Junction, Flow of Carriers Across the Junction, Depth of Charge Separation at the Interface of n- and p-Type Semiconductors, Nature of Potential at the Interface, Width of the Space Charge Region, and Quasi-Fermi Levels (QFLs). Semiconductor–Electrolyte Junction Under Illumination: Open Circuit Potential, Photovoltage and Photocurrent, Photocurrent Conversion Efficiency.<br>3. Nanostructured Semiconductor Photoelectrodes: Band Bending in Nanostructures, Effect of Surface Area, Determination of Quasi-Fermi Level Positions, Surface States and Fermi Level Pinning, Surface Recombination, Charge Separation and Collection, Charge Compensation and Charge Trapping.<br>4. Photoelectrochemical Water Splitting: Concept of Solar Driven Water Splitting and Production of Chemical Fuels/Hydrogen. Prospective Materials for Solar Driven Water Splitting and Associated Challenges. The Advanced Materials Design: Harvesting of Wider Solar Spectrum, Effective Separation and Transportation of Photo Charge Carriers, Earth Abundant Elements based Nanostructures. |

| 5 | Pre-requisite, if any | Basic knowledge in nanomaterials fabrication, characterization, devices integration and electronic devices. |
| 6 | Scope of the Course | To gain fundamental knowledge about the world of 2-D materials. The course will develop an understanding on 2-D materials fabrication, classification, and characterization. It will deliver an idea, how 2-D materials can be applied in electronics devices and its importance and advantages. |
| 7 | Course Syllabus | Introduction to 2-D Materials. Stable 2-D layer: Theoretical Consideration to Experimental Demonstration. Overview of 2-D Materials: Graphene, Silicene, Germanene, Phosphorene, Stanene, Transition-Metal-Chalcogene, MX-enes etc. Graphene: Discovery, Structure, Its Derivatives and Applications. Fabrication and Characterization of Graphene and other 2-D Materials. Electronic Properties of 2-D materials: Band Structure, Mobility, Quantum Hall Effect etc. Surface Functionalization and Modification. Surface Controlled Electrical and Optical Properties of 2-D Materials. 2-D Materials in Electronic Devices, 2-D Transistors – State of The Art; Graphene MOSFET (GFET); GFET for Digital Electronics, 2-D Materials Based Transistors: RF Transistor; Multi-Gate FET, Inter-layer Tunnelling FET. |

| Course Code | **MSE 610** |
| Title of the Course | **Design of Materials for Surface Protection and Corrosion Control** |
| Credit Structure | L-T-P-Credits<br>2-1-0-3 |
| Name of the Concerned Discipline | Materials Science and Engineering |
| Pre–requisite, if any | None |
| Scope of the Course | To expose students towards design and protection of structures towards corrosion |
| Course Syllabus | Basic concepts of interaction free surfaces. Fundamentals of Corrosion modeling, corrosion allowance calculations, life prediction of corroding structures. Design of pitting resistant materials, stress corrosion cracking resistance, and wear resistance. Design of material with free from water/moisture stagnation. Design of protective coatings : coatings for short term protection, 4-6 years, 6-10 years, 10-15 years, more than 25 years and so on. Cathodic protection design, calculation of number anodes, total weight of anodes, anode efficiencies and consumption rate. Design of CP system for storage tanks, underground cross country pipelines, offshore structures. Design of high temperature corrosion resistant materials, life of high temperature materials. |

| 3. | Credit Structure | L-T-P-Credits<br>2-1-0-3 |
| 4. | Name of the Concerned Discipline | Materials Science and Engineering |
| 5. | Pre–requisite, if any | None |
| 6. | Scope of the Course | To expose students towards coatings on resistance against corrosion |
| 7. | Course Syllabus | Concept of paint coatings, classification of various paint systems based on resin chemistry, their advantages and limitation in specific environments. Constitution of a paint coating, methods of preparation, single and two component paint systems, concept of pot life. High performance coatings, coatings for specific functions, such as hydrophobic and hydrphillic coatings, self cleaning and self healing coatings. Green coatings, concept of VOC, waterborne coatings. Surface preparation techniques and standards used. Paint application by brush, rollers, air spray, airless spray and electrostatic spray. Coating efficiency. Paint failures, reasons and remedial measures. Repair and maintenance of paint coatings. Paint application quality control and inspection. Role of supervisors and inspectors. Application of paint coatings in offshore structures, power plants, refineries and petrochemical plants and concrete structures. |

| 3. | Credit Structure | L-T-P-Credits<br>2-1-0-3 |
| 4. | Name of the Concerned Discipline | Materials Science and Engineering |
| 5. | Pre–requisite, if any | None |
| 6. | Scope of the Course | To expose students towards modeling of corrosion |
| 7. | Course Syllabus | Modelling tools, mathematics for mdeliling, finite element approach. Examples of the use of modelling in corrosion life predition. Corrosion modelling to predict the effectiveness of corrosion control measures. Computer simulation to predict current and potential distributions under different conditions and strategies to be trialled to find the most effective solution. Modern numerical methods of fracture mechanics, in particular, crack propagation and assess crack-like defects and learn how to use to predict fatigue life and how to model cracks in built up structure to model and assess multiple site damage. Computer modelling of Electrochemical and many processes and coatings to components and structures to predict their performance to learn how modelling can help improve your corrosion control solutions. Corrosion sensor technology with corrosion structural effects modeling to enable the transition from periodic corrosion inspections to an efficient, focused prognostics and health monitoring (PHM) system. Corrosion modeling in oil & gas applications, especially in cathodic protection design, inhibitors feeding. Design of corrosion in concrete. High temperature corrosion life prediction of components<br>General management approach for better organization. Basis of corrosion management. Tools of corrosion management. Organizational policies and their implementation. Corrosion management begins with design, effective corrosion control methodologies and their implementation. Corrosion monitoring and its importance in corrosion management. Periodic health monitoring and maintenance, Risk based design and identification of vulnerable components. Role of failure analysis and its importance in corrosion management by using its input in better design and control policies. |

| 4. | Name of the Concerned Discipline | Materials Science and Engineering |
| 5. | Pre–requisite, if any | None |
| 6. | Scope of the Course | To expose students towards high temperature corrosion |
| 7. | Course Syllabus | Difference between ambient temperature corrosion and High temperature corrosion, basics of oxidation, thermodynamic criterion, Ellingham diagram, nomographic representation of oxidation potential, oxide layer growth mechanisM.S. and measurement techniques, thermogravimetric techniques, isothermal and cyclic oxidation, concept of activation energy and rate constants, defects in oxides, Wagner hauffe rules, diffusion in oxides, fick's laws, kirkendal diffusion, temperature effect of diffusion, marking studies in oxide layers and oxidation mechanisM.S. using tracer studies. Thin layer oxidation, Cabrera Mott theory, Ely Wilkensin theory and theories based upon ion migration, electron jump and role of oxide structure. Thick layer oxidation, Wagner's Theory. Oxidation of pure metals, Ni, Fe, Co, Ti, Zr, Nb. Multioxide layer theory, oxidation of alloys, internal oxidation, selective oxidation, breakaway oxidation, catastrophic oxidation, oxidation of steels, stainless steels, superalloys. Oxidation in mixed environment, sulphidation, carburization, metal dusting. Hot Corrosion with examples from gas turbines and coal based power plants. Criteria of corrosion protection at high temperatures. Oxide growth stresses, scale spallation. Active element effect. Development of alloys for Gas turbine and aerospace applications, selection of materials for high temperature application. |

# PG and Ph.D. Program in Chemistry

# and

# Syllabi of Courses

**Course Structure for M.Sc. (2 year) and M.Sc. + Ph.D. Dual Degree Program in Chemistry (from 2013-14 to 2020-21)**

**Minium Education Qualification (MEQ):** Bachelor's degree with Chemistry as a subject for three years/ six semesters.

**Qualifying Examination:**
**(a) International Students:** Valid score of TOEFL or IELTS, AND valid score of GRE.
**(b) Indian Students:** Valid JAM qualification in Chemistry.

**Eligibility Requirement (ER):** As per the brochure of Joint Admission test for M.Sc. (JAM).

**Categories of Admission:**
**(a) International Students:** (i) International self-financed **(ISF)** students; (ii) International students sponsored by non-government organizations or by a reputed industry **(ISW)**; (iii) International students sponsored by foreign government or its organizations or through mutual collaborative programs of India with other countries **(GSW)**
**(b) Indian Students:** Not Applicable

**Duration of the Program:** 2 years on full-time basis**.**

**Course Structure for two-year Full-time M.Sc. (Chemistry) Program**

**1st Year: Semester-I**

| Course code | Course Title | Contact Hours (L-T-P) | Credits |
|---|---|---|---|
| CH 601 | Quantum Mechanics and Group Theory | 2-1-0 | 3 |
| CH 621 | Structural Organic Chemistry | 2-1-0 | 3 |
| CH 623 | Synthetic and Mechanistic Aspects of Organic Chemistry | 2-1-0 | 3 |
| CH 641 | Advanced Topics in Inorganic Chemistry | 2-1-0 | 3 |
| CH 643 | Modern Techniques in Inorganic Chemistry | 2-1-0 | 3 |
| **Total minimum credits earned during the semester** | | | **15** |
| **Additional course (as per the requirement basis)** | | | |
| HS 641 | English Communication Skills | 2-0-2 | PP/NP |

**1st Year: Semester-II**

| Course code | Course Title | Contact Hours (L-T-P) | Credits |
|---|---|---|---|
| CH 602 | Thermodynamics, Kinetics, Electrochemistry | 2-1-0 | 3 |
| CH 604 | Molecular Spectroscopy | 2-1-0 | 3 |

| 1 | CH 701 | Spectroscopic Techniques | 2-1-0-3 |
| 2 | CH XXX | Elective-I | x-x-x-x |
| 3. | CH XXX | Elective-II | x-x-x-x |
| 4 | CH 797 * / CH 798* | Ph.D. Seminar Course | 0-2-0-2 |

### (B) Semester-II (Spring / Autumn)

| Sr. No. | Course code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1 | CH XXX | Elective-III | x-x-x-x |
| 2 | CH XXX | Elective-IV | x-x-x-x |
| 3 | CH XXX | Elective-V | x-x-x-x |
| 4 | CH 798 * / CH 797* | Ph.D. Seminar Course | 0-2-0-2 |

### Elective Courses available from the Discipline of Chemistry

| S.No. | Course Code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1. | CH 704 | Chemistry at Surfaces and Interfaces | 2-1-0-3 |
| 2. | CH 705 | Materials Chemistry | 2-1-0-3 |
| 3. | CH 706 | Photochemistry | 2-1-0-3 |
| 4. | CH 708 | Catalysis: Approaches and Applications | 2-1-0-3 |
| 5. | CH 709 | Advanced Bioinorganic Chemistry | 2-1-0-3 |
| 6. | CH 710 | Molecular Modeling and Computational Chemistry | 2-1-0-3 |
| 7. | CH 711 | Bio-Organic and Medicinal Chemistry | 2-1-0-3 |
| 8. | CH 720 | Asymmetric Synthesis | 2-1-0-3 |

Note:

1. M.Tech./MPhil qualified candidates have to do one semester coursework (with two-three PG level courses) while M.Sc./B.Tech. qualified candidates have to do two semester course work (with minimum five PG level courses).

2. Core courses are compulsory.

* Ph.D. Seminar course can be taken either in Autumn or in Spring Semester or both as suggested by the Faculty Advisor/Thesis Supervisor.

**Course Structure for Ph.D. Program in Chemistry**
**(From AY 2013-14 onwards)**

**(A) Semester-I (autumn / spring)**

| Sr. No. | Course code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1 | ZZ xxx | Elective-I | x-x-x-x |
| 2 | ZZ xxx | Elective-II | x-x-x-x |
| 3 | ZZ xxx | Elective-III | x-x-x-x |
| 4 | CH 797* / ME 798* | Ph.D. Seminar Course | 0-2-0-2 |

**(B) Semester-II (spring / autumn)**

| Sr. No. | Course code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1 | ZZ xxx | Elective- IV | x-x-x-x |
| 2 | ZZ xxx | Elective-V | x-x-x-x |
| 3 | ZZ xxx | Elective-VI | x-x-x-x |
| 4 | CH 798* / ME 797* | Ph.D. Seminar Course | 0-2-0-2 |

**Chemistry Courses for Elective-I to VI** *(in addition to these courses, students can take courses from the other disciplines also)*

| S. No. | Course Code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1. | CH 615 | Strategies for Organic Synthesis | 2-1-0-3 |
| 2. | CH 701 | Spectroscopic Techniques | 2-1-0-3 |
| 3. | CH 704 | Chemistry at Surfaces and Interfaces | 2-1-0-3 |
| 4. | CH 705 | Materials Chemistry | 2-1-0-3 |
| 5. | CH 706 | Photochemistry | 2-1-0-3 |
| 6. | CH 708 | Catalysis: Approaches and Applications | 2-1-0-3 |
| 7. | CH 709 | Advanced Bioinorganic Chemistry | 2-1-0-3 |
| 8. | CH 710 | Molecular Modeling and Computational Chemistry | 2-1-0-3 |
| 9. | CH 711 | Bio-Organic and Medicinal Chemistry | 2-1-0-3 |
| 1( | CH 720 | Asymmetric Synthesis | 2-1-0-3 |

**NOTE:**

1. A Ph.D. student having **M.Sc./ B.Tech./ BE or equivalent qualification** has to do 5 to 7 Ph.D. level courses of at least 3 credits each and 1-2 Ph.D. seminar courses of at least 2 credits each. Minimum number of courses will be 5 Ph.D. level courses and one Ph.D. seminar course *(minimum coursework of 17 credits).*
2. A Ph.D. student having **M.Tech./ME//MPhil** qualification has to do one semester coursework (with 2-3 Ph.D. level courses). Minimum number of courses will be 2 Ph.D. level courses and one Ph.D. seminar course (i.e. *(minimum coursework of 8 credits)*.

* Ph.D. Seminar course can be taken either in Autumn or in Spring Semester or both as suggested by the Faculty Advisor/Thesis Supervisor.

|---|---|---|
| 1. | Course Code | **CH 601** |
| 2. | Title of the Course | **Quantum Mechanics and Group Theory** |
| 3. | Credit Structure | L-T-P-Credit<br>2-1-0-3 |
| 4. | Name of the Discipline | Chemistry |
| 5. | Pre–requisite, if any | Nil |
| 6. | Scope of the Course | The purpose of this course is to provide an introduction to the quantum chemistry, which uses high-level mathematics as a tool to understand atomic, molecular structure and properties, as well as chemical reactivity. In addition group theory tells us about molecular shapes, symmetry and selection rules used in spectroscopy. |
| 7. | Course Syllabus | **Quantum Chemistry:**<br>Basic concepts of calculus, vectors and matrices, black body radiation, classical wave equation, Schrödinger wave equation, models in quantum chemistry: particle in a box, harmonic oscillator and rigid rotor, theorems in quantum chemistry, spherical harmonics, approximation methods: variation and perturbation methods, multi electron atoms, atomic term symbols, di-atomic molecules, Born-Oppenheimer approximation, LCAO and molecular orbital theory, introduction to Hartree-Fock, computational quantum chemistry.<br>**Group Theory:**<br>Symmetry Operations, Point Groups, Construction of Character tables, Reducible and irreducible representation, Representation of molecular orbitals, Chemical applications: molecular shapes, selection rules in spectroscopy. |
| 8. | Suggested Books | **Text Books**<br>1. P. W. Atkins, **Molecular Quantum Mechanics**, Clarendon Press, Oxford, 1980.<br>2. I. N. Levine, **Quantum Chemistry**, 4th Edn., Prentice Hall of India Pvt. Ltd., New Delhi, 1995.<br>3. D. A. McQuarrie, **Quantum Chemistry**, University Science Books, 1983.<br><br>**Reference Books**<br>1. A. K. Chandra, **Introductory Quantum Chemistry**, Tata McGraw-Hill Publishing Co, New Delhi, 1989.<br>2. E. Merzbacher, **Quantum Mechanics**, John Wiley and Sons, 1970.<br>3. L. Pauling and E. B. Wilson, **Introduction to Quantum Mechanics**, McGraw-Hill, 1939.<br>4. P. C. W. Davies, **Quantum Mechanics**, ELBS, 1985.<br>5. A. Vincent, **Molecular Symmetry and Group Theory**, John Wiley and Sons, New York, 1998.<br>6. Volker Heine, **Group Theory in Quantum Mechanics: An Introduction to Its Present Usage**, Dover Publication, New York, 1991. |

| | | |
|---|---|---|
| 1. | Course Code | **CH 602** |
| 2. | Title of the Course | **Thermodynamics, Kinetics and Electrochemistry** |
| 3. | Credit Structure | L-T-P-Credit<br>2-1-0-3 |
| 4. | Name of the Discipline | Chemistry |
| 5. | Pre–requisite, if any | Nil |
| 6. | Scope of the Course | The objective of this course involves introduction to concepts of thermodynamics and kinetics and their application to various chemical systems. |
| 7. | Course Syllabus | **Chemical Thermodynamics and Kinetics**: Differential calculus, properties of gases, Vander Waals and Rddlich-Kwong equation, second virial coefficients, Lennard-Jones interatomic potential, kinetic theory of gases, laws of thermodynamics, Helmholtz and Gibbs energies, Maxwell relations, phase equilibrium, chemical potentials, partial molar quantities, Gibbs-Duhems equation, solid-liquid solutions, Debye-Huckel theory, Chemical equilibrium and Van't Hoffs equation. Theories of reaction rates: application to uni-, bi- and intermolecular reactions, thermodynamic formulation of reaction rates, Kinetic isotope effect, reactions in solution-cage effect, diffusion and activation controlled reactions.<br>**Statistical Thermodynamics:** Introduction to statistical methods, Boltzmann factor, partition function, generalized ensembles: micro-canonical, canonical and grand-canonical, applications of statistical methods to evaluate: mean energies, heat capacities, residual entropies and free energies.<br>**Electrochemistry:** Introduction, Ion-solvent interaction, Born model and Born equation. Enthalpy of ion-solvent interaction and its calculation, solvation number, ion association, the rates of electron transfer processes, Theory of electron transfer processes: electron tunnelling, processes at electrode: electrode-solution interface, Butler-Volmer equation, current-overpotential relationship, voltametry, electrolysis. |
| 8. | Suggested Books | **Text Books**<br>1.Peter A. Rock, **Chemical Thermodynamics**, University Science Books, 2003<br>2. T. L. |---|---|
| Course Code | **CH 612** |
| Title of the Course | **Main Group Chemistry** |
| Credit Structure | L-T-P-Credit<br>2-1-0-3 |
| Name of the Discipline | Chemistry |
| Pre–requisite, if any | Nil |
| Scope of the Course | This course will focus on the chemistry of alkali and alkaline earth metals and group 13, 14, 15, and 16 elements. |
| Course Syllabus | Chemistry of alkali and alkaline earth metals: Organo-lithium and organo-magnesium compounds. Synthesis, bonding, and reactivity. Unusual organometallic compounds of group 2 metals<br>Chemistry of group 13, 14, 15, and 16 elements: Boranes, bonding and electron counting rules in boranes, carboranes and metallaboranes. Boron containing heterocycles such as borole, borazine, azaborinine. Silanes, silicon halides, silicates, silanols; germanium, tin, and lead organyls; phosphorous halides, and phosphazenes; structural features and reactivity of S-N heterocycles.<br>Multiple bonding of compounds involving silicon, phosphorus, boron: Synthesis, structure, and reactivity. Main Group Ring and chain compounds: Classification of Main-Group Rings, Chains. Typical routes to ring and chain compounds. |

|---|---|
| Course code | **CH 615** |
| Title of the course | **Strategies for Organic Synthesis** |
| Course Category | Departmental Elective |
| Credit Structure | L-P-T-Credit<br>2-0-1-3 |
| Name of the Concerned Department | Chemistry |
| Pre-requisite, if any | Basic knowledge of chemistry |
| Scope of the course (Objectives) | This course is intended to aware and teach students various synthetic strategies for the synthesis of molecules and their applications. Aspects of synthetic approaches with their mechanism, conditions, modification, substrate scope, and applications will also be discussed. |
| Course Outcomes | • Classical and contemporary approaches for synthesis of molecules.<br>• Utilization of these approaches in pharmaceutical R&D and Industry. |
| Course Content | **(a) Click Chemistry:** Concept of Click and Bio-orthogonal chemistry and their applications.<br>**(b) Fragmentation Reactions:** Grob fragmentation, Push-Pull concept, ring expansion by fragmentation, Eschenmosher and Beckmann fragmentation.<br>**(c) Reactions using Umpolung Reactivity:** alpha electrophile; homoenolate; acyl anion; Dithiane; NHC and its applications.<br>**(d) Organic Reactions using Organo-Boranes:** Preparation of Organo-Boranes and their reactivity/selectivity & applications.<br>**(e) C-C, C-X Bond Formation using Transition Metals:**<br>1) C-H activation using Rh, Ir, Pd and their applications.<br>2) Metathesis, Olefination, Cyclopropanation using carbene complex/carbenoid.<br>3) Reactions and Application of Cobalt (Co) complexes.<br>4) Reactions and Application of Pd and Cu in C-C, C-N, C-O and carbonylative bond formation.<br>**(f) Miscellaneous Approaches:** Multi-component Reaction, Domino/Cascade/Tandem reactions, Combinatorial chemistry, Organo-catalysis, Biomimetic organic synthesis. |
| Suggested Books | **Textbooks:**<br>1) J. Clayden, N. Greeves, S. Warren and P. Wothers : Organic chemistry : Oxford Press : US : 2000 : 978-0198503460.<br>2) W. Carruthers, I. | Title of the Course | **Structural Organic Chemistry** |
| Credit Structure | L-T-P-Credit<br>2-1-0-3 |
| Name of the Discipline | Chemistry |
| Pre–requisite, if any | Nil |
| Scope of the Course | Students will become familiarized with the modern theories and instrumental techniques employed to understand the fundamentals of structure, bonding and reactivity in organic molecules. |
| Course Syllabus | MO treatment of acyclic and cyclic conjugated systems, Huckel rule and concept of aromaticity; annulenes, heteroannulens, fullerenes (C60), alternate and non-alternate hydrocarbons, anti-aromaticity, pseudo-aromaticity, homo-aromaticity, Frost diagram, Huckel treatment – applications to ethylene, allyl, cyclopropenyl, butadiene, cyclobutadiene, Importance of antibonding orbitals in organic reactions.<br>**Photochemistry:** Basic principles, Jablonski diagram, photochemistry of olifinic compounds, *Cis-trans* isomerization, Paterno-Buchi reaction, Norrish Type-I and II reactions, Photoreduction of ketons, di-π methane rearrangement, Photochemistry of arenas; Photoreactions in solid state, synthetic applications; cyclization of radicals<br>**Pericyclic reaction:** Classification and stereochemical modes; Thermal and photopericyclic reactions, selection rules and stereochemistry of electrocyclic reactions, 2-component cycloadditions – antarafacial and suprafacial additions; Rationalization based on Frontier M.O. approach, correlation diagram, Dewer-Zimmermann approach, Mobius & Huckel systems; Claisen, Cope, Aza-Cope and Oxy-Cope rearrangements, Sommelet - Hauser, Ene reaction – Applications in Organic synthesis; Fluxional Tautomerism<br>**Stereochemistry:** Effects of conformation on reactivity in acyclic compounds and cyclohexanes Conformation and reactivity of monocyclic systems-3 to 10 membered rings, 6-6, 6-5,6-4, 5-5 bicyclic systems, 6-6-6, 6-5-6, 5-6-5 and 5-5-5 tricyclic systems, enantioselective and diastereoselective synthesis, Addition to carbonyl compounds. Chirooptical properties of organic molecules: Origin, Theory of CD, ORD, their applications, haloketone rules, sector rules, helicity rules, excitation chirality. Chiral analysis by polarimeter, NMR, GC, HPLC and Capillary Electrophoresis (CE) methods, Baldwin's rules.<br>**General Concept of Spectroscopy and their applications:** IR, NMR, M.S. |

| 6 | Scope of the course | |
| 7. | Course Syllabus | **Infrared Spectroscopy:** General principles, factors influencing vibrational frequencies, selection rules, Analysis of Infra-red technique, Fourier- transform IR– Spectroscopies. Introduction to terahertz spectroscopy, Application of IR and terahertz spectroscopy Spectroscopy to inorganic and organic compounds.<br>**Raman Spectroscopy:** Principles, normal, resonance and laser Raman Spectroscopies. Structure determination by symmetry selection rules (normal coordinate analysis). Application of Raman Spectroscopy to structural chemistry. Nuclear magnetic resonance Spectroscopy.<br>**Elctronic spectroscopy:** General principles, Electronic absorption spectra of organic and inorganic molecules, Selection rules and their implications. Instrumentation: analytical applications: qualitative and quantitative analyses.<br>**Luminescence Spectroscopy:** Introduction, characteristics of fluorescence and phosphorescence emission, effects of solvents on fluorescence spectra. Lippert equation, Time scale of excited state molecular processes in solution, Life times and quantum yields. Basic instrumentation, The Biochemical applications of solvent effects: localization of membrane-bound and protein- bound fluorophores, Polarization of emission, Measurements of fluorescence Polarization, Extrinsic causes of fluorescence depolarization. Effect of rotational diffusion on fluorescence anisotropies: the perrin equation. Chemical and biochemical applications of anisotropy measurements.<br>**NMR Spectroscopy:** Nuclear magnetic resonance Spectroscopy: General principles, sensitivity of the method, CW and FT-NMR, instrumentation. Application in chemical analysis (with special reference to 1H – NMR): Chemical shift, spin-spin splitting, area of peak, shift reagents, off-resonance decoupling, Nuclear Overhauser Effect, solid state and gas phase NMR spectra.<br>**Mass Spectrometry:** Mass spectrometry: Principles, advantages and limitations of Mass Spectrometry. Instrumentation, Methods of ionization, Metastable ions. Theory of Mass Spectrometry. Structure elucidation of inorganic and organic compounds.<br>**X-ray-diffraction and X-ray photoelectron spectroscopy:** Basics Principles and applications.<br>**Electron Paramagetic Resonance:** Basic Principles, Isotropic hyperfine effects, Zeeman energy, anisotropy, hyperfine anisotropy, applications<br>**Mössbauer Spectroscopy:** Fundamentals of Mössbauer spectroscopy and applications. |

| 5. | Pre–requisite, if any | Nil |
| 6. | Scope of the course | |
| 7. | Course Syllabus | **Chemistry at the Nano-dimension:** Introduction: definition of a nano system, top-down and bottom up approach, dimensionality and size dependent phenomena, properties of Individual nanoparticles: Metal nanoparticles, semi-conducting nanoparticles, metal oxide nanoparticles, composite nanostructures, optical properties. Synthesis of Nanomaterials: Solution chemical methods, Gas or vapor based methods of synthesis: CVD, MOCVD and MBE, Sol-gel processing, Bioconjugation, Toxicity and green chemistry approaches of synthesis. Carbon nanotubes: synthesis, properties and surface functionalization, zeolites and graphenes. Magnetic nanoparticles: Synthetic methods and properties, Diamagnetism, paramagnetism and superparamagnetism, proton relaxation, surface modification. Applications in magnetic seperation, development of MRI contrast agents. Characterization of Nanomaterials: Electron microscopes-Scanning Electron Microscope, Transmission Electron Microscopes, Scanning Tunneling Microscopy, Atomic Force Microscopy, nano-tweezers, Dynamic Light scattering, Surface enhanced Resonance Raman spectroscopy, ICP-mass. Applications of Nanomaterials: Chemical and biomedical detection, imaging and therapy, Energy conversion: PV solar cells and Photo electro-chemical cells, Lasers, LEDs, photonic crystals.<br>**Metal Organic Frameworks:** Development of metal organic materials, guest removal and uptake, flexibility, topology and interpenetration, highly connected metal-organic framework, organometallic network, acentric and chiral network, application of metal-organic framework in nonlinear optics, selective absorption of gas and vapour, hydrogen, methane, carbon dioxide storage, magnetic materials.<br>**Organic Electronics:** OLED, WOLED, Liquid crystalline materials. NLO materials ($2^{nd}$ and $3^{rd}$ order NLO materials), 2Photon and multiphoton process. Organic solar cell, OFET (n-channel and P-channel) materials. |

| 6. | Scope of the Objective | The first part of the course focuses on the protein, nucleic acids functions, structure, and physio-chemical aspects of enzymes involved in biological processes. In the second part, fundamental and current methodologies involved in the drug discovery process, application of drugs to various diseases like cancer, inflammation and infection by pathogens will be discussed in detail. |
| 7. | Course Syllabus | **Bio-organic Chemistry:** Weak interactions, Buffering against pH changes in biological systems. Amino acids, Peptides and proteins, The structure of proteins, Protein mis-folding and related to diseases. Protein data bank (pdb), Peptide self-assembly at the nanoscale. IR spectroscopy - Intra and intermolecular hydrogen bonding, effect of concentration, temperature and solvent, Applications of Circular dichroism (CD) and FT-IR in the structural elucidation of protein structures. Enzymes and enzymatic reactions, Enzyme inhibitors. Nucleotides and nucleic acids, Nucleic acid structures, Function of nucleotides, DNA based self-assembling nanostructures. Systems chemistry: Dynamic combinatorial chemistry and molecular self-replication, Molecular recognition for dynamic combinatorial libraries, Targeting peptides and proteins.<br>**Medicinal Chemistry:** Molecular basis of drug action and drug design- Molecular properties, geometries, stereochemistry, conformation, energetic; Drug discovery without leads, lead discovery strategies, combinatorial chemistry: high throughput screening, principles of rational drug design; Lead Modification-Pharmacophores, functional group modification, bioisosterism, structure modification: homologation, chain branching, SAR, QSAR: Electronics, hydrophobicity, sterics; Receptor Targets-Forces in drug receptor complex, drug receptor theories: occupancy, rate, induced-fit, macromolecular perturbation, activation-aggregation, stereochemical consideration: chirality, geometric isomers, conformational isomers, ring topology. |

| 5. | Pre–requisite | Nil |
| 6. | Scope of the course | |
| 7. | Course Syllabus | **Part-I: Principles of asymmetric synthesis**<br>**Introduction and terminology:** Topocity in molecules Homotopic, stereoheterotopic (enantiotopic and diastereotopic) groups and faces-symmetry, substitution and addition criteria. Prochirality nomenclature: Pro-R, Pro-S, Re and Si.<br>**Selectivity in synthesis:** Stereo specific reactions (substrate stereoselectivity). Stereo selective reactions (product stereoselectivity): Enantioselectivity and diastereoselectivity. Conditions for stereoselectivity: Symmetry and transition state criteria, kinetic and thermodynamic control. Methods for inducing enantio and diastereoselectivity.<br>**Analytical methods:** % Enantiomer excess, % enantioselectivity , optical purity, % diastereomeric excess and % diastereoselectivity. Techniques for determination of enantioselectivity: Specific rotation, Chiral 1H NMR, Chiral lanthanide shift reagents and Chiral HPLC, Chiral GC.<br>**Part-II: Methodology of asymmetric synthesis:** Classification of asymmetric reactions into 1.substrate controlled, 2. chiral auxiliary controlled, 3. chiral reagent controlled and 4. chiral catalyst controlled.<br>**1. Substrate controlled asymmetric synthesis:** Nucleophilic additions to chiral carbonyl compounds. 1, 2- asymmetric induction, Cram's rule and Felkin-Anh model.<br>**2. Chiral auxiliary controlled asymmetric synthesis:** α-Alkylation of chiral enolates, azaenolates, imines and hydrazones. Chiral sulfoxides. 1, 4-Asymmetric induction and Prelog's rule. Use of chiral auxiliaries in Diels-Alder and Cope reactions.<br>**3. Chiral reagent controlled asymmetric synthesis**: Asymmetric reductions using BINAL-H. Asymmetric hydroboration using IPC2 BH and IPCBH2. Reductions with CBS reagent.<br>**4. Chiral catalyst controlled asymmetric synthesis**: Sharpless, Jacobsen and Shi asymmetric epoxidations. Sharpless asymmetric dihydroxylation and amino hydroxylation. Asymmetric hydrogenations using chiral Wilkinson biphosphine and Noyori catalysts. Chiral catalyst controlled Diels- Alder and Michael reactions, Organocatalytic mediated asymmetric synthesis.<br>**Part-III: Total Synthesis of Biological Active Compounds** |

# Course Structure of

# PG and Ph.D. Program in Physics

# and

# Syllabi of Courses

**Course Structure of M.Sc. (2 year) and M.Sc. + Ph.D. Dual Degree Program in Physics**

**Minimum Educational Qualification (MEQ):** 1. Bachelor's degree with Physics as a subject for at least two years/four semesters and Mathematics for at least one year/two semesters.

**Qualifying Examination:**
**(a) International Students:** Valid score of TOEFL or IELTS, AND valid score of GRE.
**(b) Indian Students:** Valid JAM qualification in Physics.

**Eligibility Requirement (ER):** As per the brochure of Joint Admission test for M.Sc. (JAM).

**Categories of Admission:**
**(a) International Students:** (i) International self-financed **(ISF)** students; (ii) International students sponsored by non-government organizations or by a reputed industry **(ISW)**; (iii) International students sponsored by foreign government or its organizations or through mutual collaborative programs of India with other countries **(GSW)**
**(b) Indian Students:** Not Applicable

**Duration of the Program:** 2 years on full-time basis**.**

**Course Structure for two-year Full-time M.Sc. (Physics) Program**

**1st Year: Semester-I**

| Course code | Course Title | Contact Hours (L-T-P) | Credits |
|---|---|---|---|
| PH 601 | Electrodynamics | 2-1-0 | 3 |
| PH 603 | Classical Mechanics | 2-1-0 | 3 |

| Course code | Course Title | Contact Hours (L-T-P) | Credit |
|---|---|---|---|
| PH 671 / IPH 471/AA471/AA671 | Relativity, Cosmology, and the Early Universe | 2-1-0 | 3 |
| AA 672N/ AA 472N | Galactic and Extragalactic Astronomy | 2-1-0 | 3 |
| PH 674 / IPH 474/AA474/AA674 | Basics of Radio Astronomy | 2-1-0 | 3 |
| PH 710 | Theory of Quantum Materials | 2-1-0 | 3 |
| PH 721 | Advanced Materials | 2-1-0 | 3 |
| PH 722 | X-ray Spectroscopy | 1-2-0 | 3 |
| PH 745 | Laser Physics | 2-1-0 | 3 |
| PH 761 | Theoretical Particle Physics | 2-1-0 | 3 |
| PH 765 | Experimental Techniques in High Energy Physics | 2-1-0 | 3 |
| PH 781 | Theory of Complex Systems | 2-0-2 | 3 |

**@** In addition to this course list, a student can also opt from the PG courses being offered by the other disciplines.

**NOTE:**

1. Request for conversion from M.Sc. to M.Sc. + Ph.D. dual degree will be considered after evaluating the research potential of the promising and motivated PG students at the end of the **third semester of their program.** The confirmation of conversion of M.Sc. program and to M.Sc. + Ph.D. dual degree program is done during 4th semester with subject to successfully qualifying CSIR/UGC-JRF or equivalent fellowship to enable receiving Ph.D. scholarship.

2. The enhancement in the scholarship from M.Sc. to Ph.D. will be from the beginning of the fifth semester or from the date on which all requirements for the award of M.Sc. degree are fulfilled AND candidate successfully qualifies CSIR/UGC-JRF or equivalent fellowship, whichever is later**.**

**3. If the** student opts for Dual Degree Program but cannot complete the requirements of a Ph.D., an **exit option** with the M.Sc. degree can be earned **before the specified date during the 4th semester** of the normal M.Sc. Program by getting the M.Sc. Research Project examined in the standard manner as per the requirements for the award of an M.Sc. degree.

**Course Structure for Ph.D. Program in Physics**
**(from AY 2010-11 to 2012-13)**

**(A) Semester-I (Autumn / Spring)**

| Sr. No. | Course code | Course Title | L-T-P-Credits |

| 1 | PH 601 | Electrodynamics | 3-0-0-3 |
| 2 | PH 651 | Mathematical Methods | 3-0-0-3 |
| 3. | PH xxx | Elective-I | x-x-x-3 |
| 4 | PH 797* / PH 798* | Ph.D. Seminar Course | 0-2-0-2 |

**(B) Semester-II (Spring / Autumn)**

| Sr. No. | Course code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1 | PH 610 | Quantum Mechanics | 3-0-0-3 |
| 2 | PH 620 | Statistical Mechanics | 3-0-0-3 |
| 3 | PH 650 | Numerical Methods | 2-0-2-3 |
| 4 | PH 798* / PH 797* | Ph.D. Seminar Course | 0-2-0-2 |

Physics course for the Elective-I

| S.No. | Course Code | Course Title | Contact Hours (L-T-P-C) |
|---|---|---|---|
| 1 | PH 621 | Solid State Physics | 3-0-0-3 |
| 2 | PH 671N / IPH 471N/AA 471N/AA 671N | Relativity and Cosmology | 2-1-0-3 |
| 3 | PH 672N/ AA 672N/ AA 472N | Galactic and Extragalactic Astronomy | 2-1-0-3 |
| 4 | PH 674 /IPH 474/ AA 474/ AA 674 | Basics of Radio Astronomy | 2-1-0-3 |
| 5 | PH 761 | Theoretical Particle Physics | 2-1-0-3 |
| 6 | PH 765 | Experimental Techniques in High Energy Physics | 2-1-0-3 |
| 7 | PH 781 | Theory of complex systems | 2-0-2-3 |

Note:
1. M.Tech./MPhil qualified candidates have to do one semester coursework (with two-three PG level courses) while M.Sc./B.Tech. qualified candidates have to do two semester course work (with minimum five PG level courses).
2. All core courses are compulsory in semester-I (Autumn).
3. Only two courses out of the three core courses PH 610, PH 620 and PH 650 are compulsory in semester-II (Spring).

* Ph.D. Seminar course can be taken either in Autumn or in Spring Semester or both as suggested by the Faculty Advisor/Thesis Supervisor.

## Course Structure for Ph.D. Program in Physics
## (for AY 2013-14)

### (A) Semester-I (Autumn / Spring)

| Sr. No. | Course code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1 | PH 613 | Developments in early 20th century in Physics | 2-1-0-3 |
| 2 | ZZ xxx | Elective-I* | x-x-x-3 |
| 3 | ZZ xxx | Elective-II* | x-x-x-3 |
| 4 | PH 797* / PH 798* | Ph.D. Seminar Course | 0-2-0-2 |

### (B) Semester-II (Spring / Autumn)

| Sr. No. | Course code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1 | PH 652 | Mathematical Methods, Electrodynamics and Applications | 2-1-0-3 |
| 2 | ZZ xxx | Elective-III* | x-x-x-3 |
| 3 | ZZ xxx | Elective-IV* | x-x-x-3 |
| 4 | PH 797* / PH 798* | Ph.D. Seminar Course | 0-2-0-2 |

**Physics Courses for Elective I - IV @**

**@** In addition to this course list, a student can also opt from the PG courses being offered by the other disciplines.

| Sr. No. | Course code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1. | PH 671 / IPH 471 | Relativity, Cosmology, and the Early Universe | 2-1-0-3 |
| 2. | PH 674 / IPH 474 | Basics of Radio Astronomy | 2-1-0-3 |
| 3. | PH 710 | Theory of Quantum Materials | 2-1-0-3 |
| 4. | PH 721 | Advanced Materials | 2-1-0-3 |
| 5. | PH 722 | X-ray Spectroscopy | 1-2-0-3 |
| 6. | PH 745 | Laser Physics | 2-1-0-3 |
| 7. | PH 761 | Theoretical Particle Physics | 2-1-0-3 |
| 8. | PH 765 | Experimental Techniques in High Energy Physics | 2-1-0-3 |
| 9. | PH 781 | Theory of Complex Systems | 2-0-2-3 |
| 10. | PH 790 | Statistical Methods in Physical Sciences | 2-1-0-3 |

Notes:

1. M.Tech./MPhil qualified candidates have to do one semester coursework (with two-three PG level courses) while M.Sc./B.Tech. qualified candidates have to do two semester course work (with minimum five PG level courses).
2. It is expected that a total of 5 courses will be taken by Ph.D. students in Physics apart from the Seminar course, which is 2 credits and can be taken in either semester.
3. The student may take 2 courses in the first semester and 3 in the second, or vice versa.
4. * Ph.D. Seminar course can be taken either in Autumn or in Spring Semester or both as suggested by the Faculty Advisor/Thesis Supervisor.

| | |
|---|---|
| Course code | **PH 612** |
| Title of the course | **Dualities in field theory and gravity** |
| Credit structure | L-T-P-Credits<br>2-1-0-3 |
| Name of the discipline | Physics |
| Pre-requisites | Some basic understandings of Theoretical Particle Physics, and Relativity and Cosmology. |
| Scope of the course | String theory provides a deep connection between Einstein's gravity and a theory of quantum fields excluding gravity. This goes by the name of holographic or gauge/gravity or AdS/CFT duality. This course aims to introduce students to the forefront of this exciting research field, tying together seemingly unconnected subjects such as black holes, condensed matter physics, quantum information theory etc., and clarifies the nature of quantum gravity. |
| Course syllabus | **Introduction**: Gravity vs all other interactions, black holes and black hole thermodynamics, holographic principle, Bekenstein bound, QCD in the large *N* limit, D-brane solutions and (super) gravity, introduction to Anti- de Sitter (AdS) spacetime.<br>**Conformal Field Theory (CFT)**: Conformal symmetries, primary operators, radial quantization, operator product expansion (OPE). **Duality conjecture and dictionary**: General aspects of the duality, generalizations, correlation functions of local operators, Wilson loops. **Holographic renormalization group**: Holographic renormalizations, Hamilton-Jacobi approach, holographic Wilsonian renormalization group approach.<br>**Insights to many-body systems**: Transports, hydrodynamics, quarkgluon plasma, interpretation of phase transitions in AdS.<br>**Applications to quantum information**: Entanglement structure, quantum error correction, computational complexity and related unfolding topics.<br>**Outlooks and open questions**: Checks of the duality, black hole information paradox, structure of quantum gravity. |
| Suggested books/ references | **Textbooks**:<br>1. M. Ammon and J. Erdmenger, **Gauge/Gravity duality: Foundations and Applications**, Cambridge University Press, 2015, ISBN: 978-1107010345<br>2. | Course Code | **PH 614** |
| Title of the Course | **Flavor Physics and Neutrino Oscillations** |
| Credit Structure | L - T - P - Credits 2- 1<br>- 0 - 3 |
| Name of the concerened Discipline | Physics |
| Pre-requisite, if any | Quantum Mechanics (Time dependent Perturabation Theory), Some familiarity with Quantum Field Theory will be advantageous but not necessary. |
| Scope of the course | Exposing the students to various aspects of modern Particle Physics research. |
| Course Syllabus | Review of two-level system in Quantum Mechanics.<br>Discrete symmetries: C, P and T, Cabibbo mechanism, Flavor changing neutral current, Glashow-Illiopoulos-Maiani (GIM) mechanism, Neutral Kaons, CP violation in the Kaon system, Cabibbo-Kobayashi-Maskawa (CKM) matrix, Wolfenstein parametrization, B-meson system, Belle experiment and CP violation in the B-system, Leptonic decays of mesons, Global symmetries of the Standard Model.<br>Neutrino mass and lepton mixing, Neutrino oscillations in vacuum, Matter effects, Majorana fermions, Lepton flavor violation, CP violation in the leptonic sector, Lepton number violation, Neutrinoless double beta decay, Models of neutrino mass (See-Saw mechanism, Left-Right symmetry).<br>Recent challenges in theoretical model building in the fermionic sector. |

| **Title of the course** | **Principles and applications of optical spectroscopy** |
| Course Category | Core |
| Credit Structure | L - T - P - Credits<br>2-0-2-3 |
| Name of the Concerned Department | Department of Physics |
| Pre-requisite, if any | Laser Physics and basics of electromagnetism |
| Scope of the course (Objectives) | Students will learn the principles of different optical spectroscopic techniques and the applications of these techniques in investigations of optical, optoelectronic and vibrational properties of materials. The students will be introduced to the working of optoelectronic parts of various spectroscopic techniques. |
| Course Outcomes | • Modern tool usage: Develop skills to use optoelectronics and spectroscopic techniques.<br>• Engineering knowledge: Develop understanding of working of optoelectronics.<br>• Life-long learning: Develop an aptitude for research on optoelectronic materials and devices. |
| Course Content | Light and matter interactions, Basic principles of optics<br>**Working principles of optoelectronics for spectroscopy:** Applications of lasers in spectroscopy, Linear and nonlinear optics, Modulators, Photodetectors, Polarizers, Gratings, Birefringent, and Waveguides.<br>**Spectroscopic techniques, physical parameters and their significance, and applications:** Atomic spectra, Rotational spectroscopy, Vibrational spectroscopy, Electronic spectroscopy, Ultraviolet-visible spectroscopy, Raman and micro-Raman spectroscopy, Fourier Transformed Infrared Spectroscopy, Time-resolved Photoluminescence Spectroscopy, Ultrafast Optical Spectroscopy.<br>**Experiments:** Based on the abovementioned spectroscopic techniques. |

| 5 | Pre–requisite, if any | |
| 6 | Scope of the Course | This course aims to introduce students to cosmology through an understanding of the General Theory of Relativity. Special emphasis will be placed on linear perturbation theory in the early universe, leading to the formation of the cosmic microwave background, as this illustrates basic undergraduate physics in the context of the frontiers of research in cosmology. |
| 7 | Course Syllabus | **1. Special Relativity:** Michaelson-Morley Experiment, Galilean vs. Lorentz transformations, Lorentz invariance, scalars in special relativity, relativistic dynamics, acceleration in special relativity<br>**2. Cosmology:** Olber's paradox; difficulty with Newtonian cosmology; brief introduction to general theory of relativity, especially the line element; Schwarzschild metric, horizon, orbits, Hawking radiation; FRW metric as a consequence of cosmological principle; redshift, angular and luminosity distances; evolution of scale factor from Newtonian cosmology; density parameter; LCDM cosmology; flatness and horizon problems, basics of inflation theory; thermal history of the Universe, big bang nucleosynthesis; microwave background. **3. Structure formation:** Jeans instability in an expanding background; initial perturbation and anisotropies in CMBR, formation of dark matter halos, galaxy formation and star formation; millennium simulation; Sunyaev-Zeldovich effect; neutral hydrogen and other elements in the IGM, Lyman α forest and damped clouds; reionization, AGN/star-formation history of the universe; Gunn-Peterson effect. |

|---|---|---|
| 1. | Course Code | **PH 691** |
| 2. | Title of the Course | **Physics Laboratory-I** |
| 3. | Credit Structure | L-T- P-Credits<br>0-0-8-4 |
| 4. | Name of the Discipline | Physics |
| 5. | Pre–requisite, if any | Basics of Safety Procedures and Conduct in Laboratories |
| 6. | Scope of the Course | This course aims to introduce basic laboratory techniques in Physics through experiments that will be conducted as Experimental Projects.<br>Students will be expected to attend laboratory sessions having familiarized themselves with basic theory of the experiments. Every experiment would be carried out in the form of a project, and students will be expected to submit a report for every experiment. |
| 7. | Course Syllabus | 1. **Thermal diffusivity**: teaches student how to do Fourier analysis of a periodic function of time. Theory involves the diffusion equation which gives thermal waves decaying in amplitude and changing in phase as they propagate.<br>2. **Dielectric constant of benzene and dipole moment of acetone**: explains the difference between polar and non- polar molecules, the concept of the local electric field different from the applied field, and the application of the Clausius-Mosotti relation.<br>3. **Verification of Curie-Weiss law for a ferroelectric using a ceramic capacitor**: The ceramic capacitor contains a ferroelectric material as a dielectric with a Curie temperature around 20 $^{o}$C. This provides a cheap and convenient method of verifying Curie-Weiss law.<br>4. **Thermal relaxation of a serial light bulb**: This experiment verifies the Debye's relaxation formula which is of importance in many areas.<br>5. **B-H curve using an integrator**: Uses a hard material so that measurement of the remanent induction, coercive field and energy loss in a cycle is easy. It also uses an integrator and indicates how by integrating Farady's law one may get the flux change.<br>6. **Calibration of a Lock in Amplifier and measurement of mutual inductance of a coil and low resistance (below 1 Ohm)**: The Lock in amplifier illustrates phase sensitive detection. One can verify all laws of mutual inductance and measure MI of about 100 μhenry to an accuracy of 2 to 3% using a current less than 1 milliampere.<br>7. **Geiger-Muller Counter:** i) Statistical nuclear counting ii) Verification of Gaussian and Poissionian Distribution.<br>8. **Feigenbaum and Chua circuits for non-linear dynamics**: This indicates how one goes from order to chaos in a deterministic non-linear system through a process of bifurcations. The Chua circuit illustrates how a non-linear negative resistive device can be built using op-amps and illustrates bifurcation in frequencies and shows different types of attractors.<br>9. **Tracing FM to PM transition in Ni and crystal structure transition in Shape memory alloy through resistivity measurement**: The experiments on phase transitions illustrate how resistivity can be used to trace phase transitions.<br>10. **Percolation**: To measure the percolation threshold for conductivity and show how conductivity varies near the threshold.<br>11. **Michelson's interferometry:** Laser diffraction (single, double and multiple slits, diffraction grating)<br>12. **Fiber optics experiment:** numerical aperture of optical fiber, study of single and multi mode optical fibers. Calibration of an unknown source |

| 6. | Scope of the Course | This course aims to introduce basic laboratory techniques in Physics through experiments that will be conducted as Experimental Projects. |
| 7. | Course Syllabus | 1. Study of half-wave and full wave rectifiers.<br>2. Designing regulated power supply (Zener diodes, regulators)<br>3. Study of transistor characteristics, Using transistor as an amplifier.<br>4. Designing a coupled amplifier.<br>5. Study of various oscillators.<br>6. Operational Amplifiers (Adder, subtractor, Integrator and Differentiator circuits)<br>7. 555 Timer circuits.<br>8. Logic gates (AND, OR, NOT, NAND, NOR) using ICs<br>9. Seven segment Decoder.<br>10. Flip Flops<br>11. Measurement of cosmic muon lifetime<br>12. Thin Films: Deposition, resistivity, reflectivity and thickness measurement<br>13. Powder XRD |
| 8. | Suggested Books | 1. P. B. Zbar, A. P. Malvino, M. A. Miller, **Basic Electronics: A Text Lab Manual**, McGraw Hill.<br>2. B. L. Worsnop and H. T. Flint, **Advanced Practical Physics for Students**, Metheun & Co. Ltd.<br>3. J. B. Rajam, **Atomic Physics**. |

| 1. | Course Code | **PH 698** |
| 2. | Title of the Course | **PG Seminar Course** |
| 3. | Credit Structure | L-T-P-Credits<br>0-2-0-2 |
| 4. | Name of the Concerned Discipline | Physics |
| 5. | Pre–requisite, if any | Nil |
| 6 | Course Objective | To develop confidence and presentation skills of the student |
| 7. | Course Syllabus | In this course a PG student has to present seminar/presentation or a series of presentations on a topic(s) chosen by him/her in consultation with his/her PG Thesis Supervisor/ Faculty Advisor. The frequency of seminar/presentation will be decided by the Course Coordinator. |
| 8. | Textbook | None |
| 8. | Other references | Books and research publications in various relevant journals/conference proceeding, etc. |

| | | |
|---|---|---|
| 1. | Course Code | **PH 710** |
| 2. | Title of the Course | **Theory of Quantum Materials** |
| 3. | Credit Structure | L-T-P-Credits<br>2-1-0-3 |
| 4. | Name of the Concerned Discipline | Discipline of Physics |
| 5. | Pre–requisite, if any | Basic Knowledge of Quantum Mechanics and Solid State Physics |
| 6. | Scope of the Course | This course aims at introducing the many body theory revolving around the second quantization. After having a profound understanding of many body theory, the course will transit to electron phonon interaction and superfluidity. The novel properties of new generation materials would be an exciting way to wrap this course finally. |
| 7. | Course Syllabus | **Second Quantization for Particles and Many Body Physics**<br>Homogenous Electron gas, Dirac notations; Physics of Hamiltonian Harmonic Oscillator and Phonons, Hubbard Model, Interaction Matrix elements, Polaron constant, Spin Hamiltonian, Homogenous Spin Systems, Ising Model, Phonon Dispersions, Dynamical Stability, Eliashberg theory, Allen Dynes formalism, High Pressure Physics, Phase Transformations, Dependence of electron-phonon interaction under hydrostatic pressure, uniaxial and biaxial strain.<br><br>**Many Body Theory of Superfluidity**<br>Introduction of superfluidity, Hartee and Exchange for Liquid $^4$He, Bogoliubov Theory of $^4$He, Off-diagonal long range order, Interaction between quasiparticle excitations, quasiparticle transport, Quantum Hall Effects, Landau Levels, Fixed Density, Fixed Chemical Potential, Impurity Dominated quantum hall effect, Laughlin Wave Function, Collective excitations, Magetorotons, Quasiholes.<br><br>**Fundamental Properties of new generation Materials**<br>Rashba Splitting, Rashba Dresselhaus Phenomena, Charge Carrier Recombination, Charge Carrier Dynamics, Excitonic effect, Van der Waals forces, London Dispersion forces, Stronger dipole-dipole forces, Non-linear Poisson Boltzmann Treatment for Solid liquid interface, Effect of Non-centrosymmetric and Spin Coupling effect on electronic band structures. |
| 8. | Suggested Books | 1. G. D. Mahan, **Many-Particle Physics,** Springer, 2000 **ISBN:** 9781475757149 (**Text Book**)<br>2. P. Coleman, **Introduction of Many Body Physics**, Cambridge University Press, 2015, **ISBN**: 9781139020916<br>3. H. |---|---|---|
| 1. | Course Code | **PH 722** |
| 2. | Title of the Course | **X-ray Spectroscopy** |
| 3. | Credit Structure | L-T-P-Credits<br>1-2-0-3 |
| 4. | Name of the Concerned Discipline | Physics |
| 5. | Pre–requisite, if any (for the students) | Basic knowledge of Quantum Mechanics, Solid State Physics and Atomic Physics |
| 6. | Scope of the course | To introduce the students to different X-ray based sophisticated experimental probes that are widely used for modern day materials research. Importantly, the techniques taught in this course will be established at IIT Indore in near future and this course will be of immense benefit to the students who would like to use these techniques. |
| 7. | Course Syllabus | **Scattering of X-Rays, X-ray Diffraction (XRD)** – Theory, Instrumentation, Data Analysis – Introduction to Rietveld method, diffraction from amorphous solids, small angle scattering, Reflectivity.<br>**Photoelectron Spectroscopy** – Instrumentation, Core-levels and Final States, Low-Energy Satellites, Valance Band in Metallic solids and Insulators, Quantitative and Qualitative Data analysis,<br>Other related processes – Auger Effect and ESCA, Inverse Photoelectron spectroscopy, X-ray Fluorescence<br>**Emission Spectroscopy** – Resonant inelastic and Non-resonant X-ray Emission Spectroscopy (RIXS and NXES), Theory, Instrumentation, Data interpretation<br>**X-ray Absorption:** Near Edge and Extended X-Ray Absorption Fine Structure (XANES and EXAFS), Transmission and Fluorescence method of detection, X-ray Magnetic Circular Dichroism (XMCD), Data interpretation.<br>**X-ray Spectrometers:** Cauchois-type bent crystal X-ray spectrograph, Johnson and Johansson spectrometers and two crystal x-ray spectrometers |
| 8. | Suggested Books | 1. Elements of X-ray Diffraction ($3^{rd}$ Edition) – B. D. Cullity and S. R. Stock, Prentice Hall, ISBN: 978-0201610918<br>2. Photoelectron Spectroscopy: Principles and Applications – Stefan Hüfner, Springer 2003, ISBN : 9783-54041-8023<br>3. Modern Spectroscopy ($4^{th}$ Edition), – J. Michael Hollas, John Wiley & Sons, Ltd. ISBN: 978-0-470-84416-8<br>4. X-Ray absorption : principles , applications, techniques of EXAFS, SEXAFS and XANES – Ed. By D. C. Koningsberger and R. Prins, John Wiley & Sons, ISBN: 978-0-47187-5475 |

| | | |
|---|---|---|
| 1. | Course Code | **PH 725** |
| 2. | Title of the Course | **Characterization of Surfaces and Interfaces of Materials** |
| 3. | Credit Structure | L-T- P-Credits<br>2-0-2-3 |
| 4. | Concerned Discipline | Physics |
| 5. | Pre–requisite | Basic Knowledge of Quantum Mechanics, and Mathematics. |
| 6. | Scope of the course | To make the students to understand the mechanisms and applications of the characterization techniques/methods commonly used in the experimental research. |
| 7. | Course Syllabus | **Scattering:** Introduction, Review of crystallography, unit cell notation; Nature of x-rays, EM spectrum, generation of x-rays, spectra; Bohr model and transitions, Relation to multiple techniques Interaction of EM radiation with matter, absorption, Filters.<br>**X-ray scattering:** X-Ray Diffraction, Bragg's law; Intensities of diffracted beams, Scattering, form factor, Structure factor; Single Crystal X-ray Diffraction; Powder X-ray Diffraction; Grazing Incidence X-ray Diffraction (GIXRD); X-ray reflectivity to characterize the surface and interfaces of thin films (<~100nm in Å order resolution); Small angle x-ray scattering (SAX), Wide angle x-ray scattering (WAX), Grazing-Incidence Small-Angle x-ray Scattering (GISAXS). Application of these techniques in characterization of soft-matters, thin films and nano-materials; Neutron Scattering; Counters; Advantage of use of Synchrotron; Radiation for material characterization.<br>**Spectroscopy:** Near Edge X-ray Absorption Fine Structure (NEXAFS) Spectroscopy for organic materials and extension to EXAFS; Electronic Spectroscopy: Vacuum ultraviolet (VUV), UV-visible spectroscopy of organic materials/thin films; Surface spectroscopies based on electrons or photons or ions: X-ray Photo Electron Spectroscopy (XPS), Electron Energy Loss Spectroscopy (EELS), Secondary Ion Mass Spectroscopy (SIM.S.)<br>**Microscopy:** SEM; TEM (HRTEM, SAD), High Angle Annular Dark field STEM (HAADF STEM); SPM (STM, AFM).<br>**NMR:** Basics and application to biological structure determination; Vibrational spectroscopies: IR and Raman. |

# Course Structure

# of

# PG and Ph.D. Program in Mathematics

# and

# Syllabi of Courses

# (AY 2015-16)

**Curriculum for M.Sc. and M.Sc. + Ph.D. dual degree Program in Mathematics from AY 2015-16**

**Minimum Education Qualification (MEQ):** Bachelor's degree with Mathematics as a subject for at least two years/four semesters.

**Qualifying Examination:**
**(a) International Students:** Valid score of TOEFL or IELTS, AND valid score of GRE.
**(b) Indian Students:** Valid JAM qualification in Mathematics.

**Eligibility Requirement (ER):** As per the brochure of Joint Admission test for M.Sc. (JAM).

**Categories of Admission:**
**(a) International Students:** (i) International self-financed **(ISF)** students; (ii) International students sponsored by non-government organizations or by a reputed industry **(ISW)**; (iii) International students sponsored by foreign government or its organizations or through mutual collaborative programs of India with other countries **(GSW)**
**(b) Indian Students:** Not Applicable

**Duration of the Program:** 2 years on full-time basis**.**

**Course Structure for 2-Year Full-time M.Sc. (Mathematics) Program**

**1st Year: Semester-I**

| Course Code | Course Title | Contact Hours (L-T-P) | Credits |
|---|---|---|---|
| MA 611 | Analysis-I | 3-1-0 | 4 |
| MA 621 | Ordinary Differential Equations | 2-1-0 | 3 |
| MA 641 | Linear Algebra | 3-1-0 | 4 |
| MA 673 | Fundamentals of Discrete Mathematics | 2-1-0 | 3 |
| MA 675 / ME 675 | Probability and Statistical Methods | 2-0-2 | 3 |
| | | **Total minimum credits during the semester** | **17** |
| **Additional Course (as per requirement basis)** | | | |
| HS 641 | English Communication Skills | 2-0-2 | PP/NP |

**1st Year: Semester-II**

| Course Code | Course Title | Contact Hours (L-T-P) | Credits |
|---|---|---|---|
| MA 610 | Complex Analysis | 3-1-0 | 4 |
| MA 612 | Analysis-II | 3-1-0 | 4 |
| MA 620 | Partial Differential Equations | 2-1-0 | 3 |
| MA 640 | Algebra-I | 3-1-0 | 4 |
| MA 680 | Computational Techniques | 3-0-2 | 4 |
| | | **Total minimum credits during the semester** | **19** |

**2nd Year: Semester-III**

| Course Code | Course Title | Contact Hours (L-T-P) | Credits |
|---|---|---|---|
| MA 603 | Topology-I | 3-1-0 | 4 |
| MA 631 | Functional Analysis | 3-1-0 | 4 |
| MA 643 | Algebra-II | 2-1-0 | 3 |
| MA 651 | Numerical Analysis | 2-1-0 | 3 |
| MA 671 / ME 671 / ME 471 | Operations Research | 2-0-2 | 3 |
| MA 799 **OR**<br>ZZ xxx | M.Sc. Research Project (Stage-1) **OR one Elective course in lieu** [Elective-I] | 0-0-6<br>**OR** x-x-x | 3 |
| | | **Total minimum credits during the semester** | **20** |

**2nd Year: Semester-IV**

| Course Code | Course Title | Contact Hours (L-T-P) | Credits |
|---|---|---|---|
| ZZ xxx | Elective I **OR** [Elective II] | x-x-x | 3 |
| ZZ xxx | Elective II **OR** [Elective III] | x-x-x | 3 |
| MA 800<br>**OR**<br>ZZ xxx<br>ZZ xxx<br>ZZ xxx | M.Sc. Research Project (Stage-2)<br>**OR**<br>Three elective courses [i.e. Electives IV-VI] | 0-0-18<br>**OR**<br>x-x-x<br>x-x-x<br>x-x-x | 9 |
| | | **Total minimum credits during the semester** | **15** |
| | | **Total minimum credits during the program** | **71** |

**Courses from Discipline of Mathematics for the PG students in Mathematics @:**

MA 652/ MA 452: Theory of Transforms
MA 654/ MA 454: Mathematical Modeling and Simulations
MA 714: Advanced Complex Analysis
MA 734: Fourier Analysis on Euclidean Spaces
MA 736: Wavelet Analysis
MA 742: Commutative Algebra
MA 780: Mathematical Logic
MA 782: Theory of Computations

**@** In addition to this course list, a student can also opt from the PG courses being offered by the other disciplines. An M.Sc. student can also choose elective courses from Ph.D. course curriculum of Mathematics except the courses MA 741: Algebra, MA 711: Analysis, MA 720: Differential Equations, MA 703: Topics in Analysis.

**NOTE:**

**1.** During the second semester, students will choose their research project guide(s) and continue their research project work in the third and fourth semesters.

**2.** Students will submit a dissertation after the completion of their research project work as per the time schedule mentioned in the PG course curriculum.

3. Request for conversion from M.Sc. to M.Sc. + Ph.D. dual degree will be considered after evaluating the research potential of the promising and motivated PG students at the end of the **third semester of their program.** The confirmation of conversion of M.Sc. program and to M.Sc. + Ph.D. dual degree program is done during 4th semester with subject to successfully qualifying CSIR/UGC-JRF or equivalent fellowship to enable receiving Ph.D. scholarship.

4. The enhancement in the scholarship from M.Sc. to Ph.D. will be from the beginning of the fifth semester or from the date on which all requirements for the award of M.Sc. degree are fulfilled AND candidate successfully qualifies CSIR/UGC-JRF or equivalent fellowship, whichever is later**.**

**5. If the** student opts for Dual Degree Program but cannot complete the requirements of a Ph.D., an **exit option** with the M.Sc. degree can be earned **before the specified date during the 4th semester** of the normal M.Sc. Program by getting the M.Sc. Research Project examined in the standard manner as per the requirements for the award of an M.Sc. degree.

**Course Structure for Ph.D. program in Mathematics**

**(during AY 2010-11 to 2012-13)**

**(A) Semester-I (Autumn / Spring)**

| Sr. No. | Course code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1 | MA 601 | Topology | 2-1-0-3 |
| 2 | MA 703 | Topics in Analysis | 2-1-0-3 |
| 3 | ZZ xxx | Elective-I | 2-1-0-3 |
| 4 | MA 797 */ MA 798* | Seminar Course | 0-2-0-2 |

**(B) Semester-II (Spring / Autumn)**

| Sr. No. | Course code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1 | MA 702 | Conformal Mappings | 2-1-0-3 |
| 2 | MA 704 | Probability Theory | 2-1-0-3 |
| 3 | MA 706 | Numerical Linear Algebra | 2-1-0-3 |
| 4 | ZZ xxx | Elective-II | x-x-x-3 |
| 5 | MA 798 * / MA 797* | Seminar Course () | 0-2-0-2 |

**Mathematics course for the Elective-I and Elective-II** *(in addition these courses students can take courses from the other disciplines / School)*

| S.No. | Course Code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1 | MA 701 | Experimental Designs and Data Analysis | 2-1-0-3 |
| 2 | MA 705 | Applied Operator Theory | 2-1-0-3 |
| 3 | MA 707 | Special Functions | 2-1-0-3 |
| 4 | MA 708 | Ergodic Theory | 2-1-0-3 |
| 5 | MA 709 | Advance Numerical Methods for Linear Control Systems | 2-1-0-3 |
| 6 | MA 710 | Fractional Differential Equations | 2-1-0-3 |
| 7 | MA 712 | Advanced Analysis | 2-1-0-3 |

Note: M.Tech./MPhil qualified candidates have to do one semester coursework (with 2-3 PG level courses) while M.Sc./B.Tech./BE qualified candidates have to do two semester course work (with minimum 5 PG level courses).

* Ph.D. Seminar course can be taken either in Autumn or in Spring Semester or both as suggested by the Faculty Advisor/Thesis Supervisor.

**Course Structure for Ph.D. program in Mathematics**

**(for AY 2013-14)**

**(A) Semester-I (Autumn / Spring)**

| Sr. No. | Course Code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1 | MA 711 | Analysis | 2-1-0-3 |
| 2 | MA 741 | Algebra | 2-1-0-3 |
| 3 | ZZ XXX | Elective – I | x-x-x-3 |
| 4 | MA 798* / MA 797* | Ph.D. Seminar Course | 0-2-0-2 |

**(B) Semester-II (Spring / Autumn)**

| Sr. No. | Course Code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1 | MA 720 | Differential Equations | 2-1-0-3 |
| 2 | ZZ XXX | Elective – II | x-x-x-3 |
| 3 | MA 798* / MA 797* | Ph.D. Seminar Course | 0-2-0-2 |

**Mathematics course for the Elective I-II**

(In addition to these elective courses, students can take elective courses from other Disciplines also).

| S. No. | Course Code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1. | MA 601 | Topology | 2-1-0-3 |
| 2. | MA 701 | Experimental Designs and Data Analysis | 2-1-0-3 |
| 3. | MA 702 | Conformal Mappings | 2-1-0-3 |
| 4. | MA 703 | Topics in Analysis | 2-1-0-3 |

| | |
|---|---|
| Course code | **MA 605/ MA 405** |
| Title of the course | **Differential Equations in Population Dynamics** |
| Credit Structure | L-T-P-Credits<br>2-0-2-3 |
| Name of the Concerned Department/ Centre | Mathematics |
| Prerequisite, if any | Differential Equations and Numerical Methods |
| Scope of the course | The objective of the course is to present differential equation models arising in population dynamics, physical, mechanical and chemical systems, etc. The course will give an opportunity to apply several mathematical theories, methodologies and computational techniques of differential equations in the aforementioned areas. Current research advances in the field of modelling will also be discussed. After completing the course, students are expected to start research work in advanced topics. |
| Course Syllabus | **Introduction:** Mathematical models: Necessity, advantages and limitations; Brief history of population models, Different tools and modeling frameworks, Birth and death processes in population models.<br>**Ordinary differential equations:** The Multhus, Verhulst, Lotka-Volterra, Rosenzweiz-MacArthur and Hestings-Powell models, Routh-Hurwitz criteria, Mean population density in cyclic and chaotic dynamics, Population harvesting, Resilience in Ecology, Hydra effects, Population genetic models, FitzHugh-Nagumo model.<br>**Partial differential equations:** Fisher equation, Turing instability, Pattern formation, Spatiotemporal chaos, Reaction-diffusion in Ecological and Chemical systems, Diffusion in delayed predator-prey systems.<br>**Delay differential equations:** Discrete and distributed delays in population dynamics, Hopfbifurcation and stability switching, Delayed harvesting in Nicholson blowflies model, Delayed dispersal in patchy environment, Mackey-Glass equation.<br>**Impulsive differential equations:** Fixed-time and variable-time impulses, Impulses in biological control theory and epidemic models.<br>**Applications of softwares:** Several measures will be quantified in all the models using computer simulations, and graphical representations will be provided to interpret the system dynamics. |

| 6. | Objectives of the course | At the end of the course, students should be exposed to fundamental knowledge and problem solving skills in Group and Ring theories. |
| 7. | Course Syllabus | Binary operation, and its properties, Definition of a group, Examples and basic properties. Subgroups, Coset of a subgroup, Lagrange's theorem. Cyclic groups, Order of a group. Normal subgroups, Quotient group. Homomorphisms, Kernel and Image of a homomorphism, Isomorphism theorems. Permutation groups, Cayley's theorems. Direct product of groups. Group action on a set. Sylow' theorems. Structure of finite Abelian groups.<br><br>Rings: definition, examples and basic properties. Zero divisors, Integral domains, Fields, Characteristic of a ring, Quotient field of an integral domain. Subrings, Ideals, Quotient rings, Isomorphism theorems. Ring of polynomlals. Prime, Irreducible elements and their properties, UFD, PID and Euclidean domains. Prime ideal, Maximal ideals, Prime avoidance theorem, Chinese remainder theorem. |

| **Title of the course** | **Mathematical Theory of Waves** |
| Credit Structure | L-T-P-Credits<br>2-1-0-3 |
| Name of the Concerned Discipline | Mathematics |
| Pre-requisite, if any | Multivariable Calculus, Differential Equations |
| Scope of the course | To expose the students to the basic ideas that underline linear wave motion. To derive important mathematical tools to deal with problems of wave theory.To consider simple examples of linear waves on strings, sound waves and water waves. To develop the mathematical models of waves and to ultimately apply those models to understand the elastic waves, sound waves and light waves. |
| Course Syllabus | • Introduction to waves and Review of the wave equation;<br>• Traveling and standing waves; Waves on strings;Waves in membranes; Longitudinal waves in bars and springs;Waves in liquids; Sound waves: Plane, cylindrical and spherical sound waves;Waves associated with theconservation laws; Electric waves;<br>• General considerations on waves: Doppler effect, beats, amplitude modulation, group velocity, motion of wave packets, dispersion, Kirchhoff's solution, Fresnel's principal, Fraunhofer diffraction theory; Wave propagation in an inhomogeneous media;<br>• Characteristics of nonlinear waves: general effect of nonlinearity, wave-fronts bounding a constant state, Riemann invariants, Piston problem, Discontinues solutions and shock waves, Wave localization phenomena.<br>• **Free vibration, forced harmonic vibration and resonance.**<br>• Some special waves: Seismic waves, Traffic waves, Water waves. |

| **Course code** | **MA 653** |
| **Title of the course** | **Ramanujan's Mathematics** |
| Credit Structure | L-T-P-Credits<br>2-1-0-3 |
| Name of the Concerned Department | Mathematics |
| Pre-requisite, if any | Basic Knowledge of Real and Complex Analysis |
| Scope of the course | Srinivasa Ramanujan discovered around 4000 formulas in his short life of 32 years. In this course, we shall study various areas of Mathematics in which Ramanujan made startling contributions. At the end of the course, students will have a brief idea of recent research activities developed from Ramanujan's work. |
| Course Syllabus | Magic square, History of magic Square, Some open problems on Magic square, Ramanujan 's taxi-cab number, Generalization of Ramanujan's taxi-cab number, Hypergeometric series, Rapidly convergent series for 1 by pi, Gamma function, Riemann zeta function, Euler's formula for even zeta values, Ramanujan's formula for odd zeta values, Meaning to some divergent series, for example 1+2+3+---= -1/12, Partition function, Congruence of partition function, Asymptotic of the partition function, Ramanujan's tau function, Some important properties of Ramanujan's tau function. |
| Suggested Books | 1. S. Ramanujan, ***Notebooks of Srinivasa Ramanujan, Vol 1 and 2***, TIFR, Mumbai, 2012.<br>2. B. C. | **Title of the course** | **Mathematical Modeling and Simulations** |
| Credit Structure | L - T - P - Credits<br>2-1-0-3 |
| Name of the Concerned Discipline | Mathematics |
| Pre-requisite, if any | Differential Equations, Linear Algebra |
| Scope of the course | The Mathematical model plays a significant role providing a quantitative framework for understanding and solving many real-life problems under certain conditions. Most of the mathematical models have been like individual works of art that reflected the personal characteristics and scientific views of the modeler. At the end of the course, students should be exposed to fundamental knowledge of implementing the models in real-world situations. They will get the bright idea about constructing or selecting the appropriate model, identify the problem, Analytically or numerically computing the solution and test the validity of models. This course provides an introduction to modeling through in-depth discussion of a series of real examples. |
| Course Syllabus | **Introduction to Mathematical Modeling:** Characteristics, Classifications, Tools, Techniques, Deterministic and stochastic models, Modeling approaches, Compartmental models, Introduction to Discrete Models and Continuous Models, Dynamical systems and its mathematical models.<br><br>**Models from systems of natural sciences:** Population models for a single species (discrete and continuous-time models), Modeling of population dynamics of two interacting species, Analytical Tool: Kolmogorov Theorem, Linear Stability Analysis, Lotka-Volterra Model, Variation of the Classical LV Model, Leslie-Gower Model, Prey-Predator Model, Arms Race Model, Holling-Tanner Model, Modified HT Model, Applications of Lyapunov functions.<br><br>**Modeling of Atmospheric, Mining and Engineering systems:** Spatial Models Using Partial Differential Equations, Modeling with Stochastic Differential Equations, Models of Heating and Cooling, Models for traffic flow, Model for detecting land mines, Models in Mechanical Systems, Models in Electronic systems, Models for vehicle dynamics, Kicked Harmonic oscillator, Modeling the ventilation system of a mine.<br><br>MATLAB/MATHEMATICA programs to study the dynamics of the developed model systems. |
| Suggested Books | 1. B. Barnes, G. R. Fulford, ***Mathematical Modeling with Case Studies,*** CRC PRESS, Taylor & Francis, London, New York, 2009, 13, 978-1-4200-8348-4<br>2. Edward A. |---|---|---|
| 1. | Course Code | **MA 706** |
| 2. | Title of the Course | **Numerical Linear Algebra** |
| 3. | Credit Structure | 2-1-0-3 |
| 4. | Name of the Concerned Discipline | Mathematics |
| 5. | Pre–requisite, if any | Knowledge of basic linear algebra. |
| 6. | Scope of the course | Problems in Numerical Linear Algebra arise in a wide variety of scientific and engineering applications including the control theory, the analysis of electrical networks, and the modeling of chemical processes. This course will cover the analysis and implementation of algorithms used to solve linear algebra problems. We will study algorithms for linear systems solution, linear least-square problems, and eigenvalue and singular value problems. Further, we study the sensitivity and stability analysis of the above algorithms to improve efficiency of problems by using various structures of matrices. |
| 6. | Course Syllabus | Floating point error, Round off error, Gram-Schmidt orthonormal process, Modified Gram-Schmidt orthonormal process,<br>**Solution of linear system:** Triangular systems and Inverse of a triangle matrix, Gauss elimination and LU Factorization method, QR factorization, QR Algorithm.<br>Rank deficient least square problems, SVD, Moore Penrose inverse, Linear iterative methods – Convergence results for Jacobi & Gauss -Seidel and relaxation method.<br>Stationary & non stationary iterative methods Convergence analysis of the Richardson method, the gradient method, the Conjugate gradient method.<br>Method based on Krylov subspace Arnoldi method, the GMRES, The Lanczos method. Approximation of Eigen value: Power method, Inverse iteration, Sensitivity analysis of Eigen values and Eigen vectors, canonical forms of matrices, Reduction to Hessenberg and tridiagonal form, conditioning of numerical algorithms.<br>Applications to control, $H_\infty$ control, Distance problems.<br>Analysis of electric network.<br>Finite Difference analysis of ordinary differential equation- Beam bending problem.<br>Finite difference analysis of partial differential equation-Heat equation.<br>Applications to Internet search engine-Google Matrix. |

**Course Structure for M.Sc. (2 year)/ M.Sc. + Ph.D. Dual Degree Program in Biotechnology (from AY 2017-18 to 2020-21)**

**Minimum Education Qualification (MEQ):** Bachelor's degree.

**Qualifying Examination (QE):**
**(a) International Students:** Valid score of TOEFL or IELTS, AND valid score of GRE.
**(b) Indian Students:** Valid JAM qualification in Biotechnology.

**Eligibility Requirement (ER):** As per the brochure of Joint Admission test for M.Sc. (JAM).

**Categories of Admission:**
**(a) International Students:** (i) International self-financed **(ISF)** students; (ii) International students sponsored by non-government organizations or by a reputed industry **(ISW)**; (iii) International students sponsored by foreign government or its organizations or through mutual collaborative programs of India with other countries **(GSW)**
**(b) Indian Students:** Not Applicable

**Duration of the Program:** Two years on full-time basis.

**Course Structure for two-year Full-time M.Sc. (Biotechnology) Program**

| Course code | Course Title | Contact Hours (L-T-P) | Credits |

**NOTE:**

**1.** Request for conversion from MSc to MSc + PhD dual degree will be considered after evaluating the research potential of the promising and motivating PG students at the end of **the third semester of their program**. The confirmation to the PhD program will be subjected to successfully qualifying CSIR/UGC-JRF or equivalent fellowship.

**2.** If the student opts for Dual Degree Programme but cannot complete the requirements of a PhD, an **exit option** with the MSc degree can be earned at the end of the final semester of the normal MSc Programme by getting the MSc Research Project examined in the standard manner as per the requirements for the award of an MSc degree.

**3.** The enhancement in the scholarship, if any, from MSc to PhD will be from the beginning of the fifth semester or from the date on which all requirements for the award of MSc degree are fulfilled, whichever is later.

**Course Structure for M.Tech. (2 year), M.Tech. + Ph.D. Dual Degree in Biomedical Engineering (from AY 2023-2024)**

**Minimum Educational Qualification (MEQ) (For Indian applicants):**

i. B.E./B.Tech. /AMIE or equivalent in Biomedical Engineering (BM), Biotechnology (BT), Chemical Engineering (CH), Computer Science and Engineering/ Information Technology (CS), Electrical Engineering (EE), Electronics/Telecommunications Engineering (EC), Engineering Physics (EP), Instrumentation Engineering (IN), Mechanical Engineering (ME), Metallurgy & Materials Science (MT), Pharmaceutical Technology (PY), Other Engineering (ZE) (with the first division as defined by the awarding Institute/University)

**OR**

ii. M.Sc. or equivalent in Biochemistry (BY), Biophysics (BP), Biotechnology (BT), Ceramics (CG), Chemistry (CY), Electronics / Electronic Sciences (EC), Ergonomics (ER), Materials Science (MS), Mathematics (MA), Molecular Biology (MG), Physics (PH), Physiology (PS), Other Science (ZS) (with the first division as defined by the awarding Institute/University)

**OR**

iii. ** Health Sciences such as MBBS (Medicine) / BDS (Dental), B.Pharm/B.V.Sc., B.P.Th. ,B.O.Th., B.ASLP) (Duration 4 years or more) (with the first division as defined by the awarding Institute/University)

**Minimum Educational Qualification (MEQ) (For International applicants):**

Four-year Bachelor's degree or five-year integrated degree (with the first division as defined by the awarding Institute/University) in Biomedical Engineering/ Instrumentation Engineering/ Electrical Engineering/ Mechanical Engineering/ Engineering Sciences/ Biotechnology/ Life Sciences/ Physics/ Chemistry.

**Qualifying Examination (QE):**

**(a) Indian applicants:** Valid GATE score in any discipline for engineering and science (for i and ii above)

** All India level post graduate entrance examination for corresponding disciplines such as INI_CET/NEET-PG/NEET-MDS/JIPMER/PGI Chandigarh/AFMC-Pune/DNB Part-I for MBBS/BDS, GPAT/ All India level selection examination for B.Pharm.,All India level post graduate entrance examination for M.V.Sc., M.P.Th., M.O.Th. and M.ASLP, or GATE examination for all such health science background. (for iii above)The candidate should have qualified the entrance exam (as per the qualification criterion of the respective exam for that exam year and category) and the score obtained should be valid (as per the duration of validity for the respective exam) at the time of application to the M.Tech. program.

The admission of students (under TA category) to M. Tech. in Biomedical Engineering program will be based on :

a) their qualifying discipline and the corresponding valid GATE score and written test or interview or both.

b) for, non-GATE candidates, admission will be based on valid score in respective qualifying exam and written test or interview or both.

**(b) International applicants:** Valid GRE or TOEFL or IELTS score

**Categories of Admission:**

**(a) Indian applicants:** Teaching Assistantship **(TA)**; (ii) Highly motivated sponsored candidate **(SW)** on full-time basis from highly reputed R and D organizations such as DRDO, ISRO, BHEL, C-

DAC, ADE, ADA, etc. and highly reputed Industries; (iii) Defense Forces **(DF)**: Candidates sponsored by the Defense Forces; (iv) Regular Institute Staff **(IS)** of IIT Indore on part-time basis only.

**(b) International applicants:** (i) International self-financed **(ISF)** students; (ii) International students sponsored by non-government organizations or by a reputed industry **(ISW)**; (iii) International students sponsored by foreign government or its organizations or through mutual collaborative programs of India with other countries **(GSW)**

***Candidates of SW, DF and IS categories will not be provided any scholarship.***

**Selection Criteria:** Admission would be based on GATE score, personal interview and/ or the written examination.

**Duration of the Program:** Two years full-time.
**Total Intake:** 10 (TA)
**Scholarship: (only for TA category Indian students):** As per MoE norms.

**Course Structure for two-year Full-time M.Tech. in Biomedical Engineering**

| 4 | BSE 798 / BSE 797* | Ph.D. Seminar Course | 0-2-0-2 |

**NOTE:**

1. A Ph.D. student having **M.Tech./ME//MPhil** qualification has to do one semester coursework (with 2-3 Ph.D. level courses). Minimum number of courses will be 2 Ph.D. level courses and one Ph.D. seminar course i.e. *(minimum coursework of 8 credits)*.
2. A Ph.D. student having **B.Tech./ B.E./ M.Sc.** or **equivalent qualification** admitted to Ph.D. Program in an Engineering discipline shall do 6-8 courses of at least 3 credits each and 1-2 Ph.D. Seminar courses of at least 2 credits each. Minimum number of courses will be 6 Ph.D. level courses and one Ph.D. seminar course (minimum coursework of 20 credits).

* Ph.D. Seminar course can be taken either in Autumn or in Spring Semester or both as suggested by the Faculty Advisor/Thesis Supervisor.

**Courses for the Electives-I to VI** (In addition to this course list, a student can also opt from the PG courses being offered by other disciplines.)

| 5. | Pre–requisite, if any | Open to all graduates, with the prior permission of course instructor. |
| 6. | Scope of the Course | This course is designed to teach the basics of Physics, sufficient for BSBE graduate students. The fundamental physics of Biological phenomena will be discussed. It will also prepare students to learn and apply biophysical approaches to understand biochemical, biotechnological and medical problems. |
| 7. | Course Syllabus | Review of calculus and its application in biology. Introduction to thermodynamics and role in biology. Discussion about various stages of evolution. Single cell machinery to multi-cellular organs.<br><br>Structure of biomolecules. Elements of building blocks for macromolecules. Weaker interatomic interactions. Hydrogen bond and hydrophobic interactions. Amphiphilic molecular behavior in aqueous environments. Introduction to X-ray crystallography.<br><br>Structures and physics of amino acids and proteins. Conformational transitions of proteins (folding and unfolding of proteins), Ramachandran plot. Physics of nucleic acid, membranes and membrane physics. Modeling membranes as elastic materials.<br><br>Dynamics of biomolecules: diffusion, vibrations versus conformational transitions. Interaction of biomolecules with electromagnetic radiation.<br><br>General characteristic of a cell. Cytoskeletal organizations and constituents molecules and their mechanism. Ion channels and ion pumps, osmotic pressure of cells.<br><br>Cellular energetics: chloroplast and mitochondria. Cells as thermodynamic machines. Active transport.<br><br>Review of fundamentals of electricity and magnetism. Bioelectricity, heart dynamics, anatomy of nerve cells, conducting properties of neurons. Structure and function of synapse. |

| 3. | Credit Structure | L-T-P-C<br>2-1-0-3 |
| 4. | Name of the Discipline | Biosciences and Biomedical Engineering |
| 5. | Pre–requisite, if any | Basic Biology and Basic Biochemistry (Undergraduate level). |
| 6. | Scope of the Course | The course is designed to provide graduate students a broad background view on virus history, classification, structure, life cycle, virus-host interactions. The course is designed primarily in the context of animal virology. There will be emphasis on viral reverse genetics in designing successful vaccines. The course further aims provide a brief career road map to the students to become a successful virologist. |
| 7. | Course Syllabus | Virus history: Discovery of viruses, Major viral epidemics in human history (e.g. Influenza, HIV, Polio, SARS, Ebola), Milestones in virology research, Emerging infectious viral diseases. Virus classifications.<br>Nano life: A quick view on virus structure and classification: General characteristics of viruses, diversity, shapes, sizes, and components of genomes. Virus life cycle in host cell. Assembly and packaging of virus particles. Strategies how virus packages its genome and exits the living cell.<br>Virus-host interaction: Concepts of co-evolution of viruses and humans. Virus entry, replication. Consequences of virus infection. Mechanisms to invade host defense. Strategies on counter attack. Overview on anti-viral therapy.<br>Reverse Genetics: Reverse genetics in virology: Generation of recombinant virus from cDNA. Focus on negative strand RNA viruses recovery and genome manipulations. Customizing and designing viral vaccine candidates through reverse genetics.<br>Virotherapy: Use of viruses for treatment of diseases. Creating oncolytic virus for cancer treatment. Gene therapy through viral vector mediated gene expression. Viral Immunotherapy: Principles and implications. |

| 5. | Pre–requisite, if any | None |
| 6. | Scope of the course | The course will cover the fundamentals of Biochemistry |
| 7. | Course Syllabus | **CARBOHYDRATES**<br>**Oligosaccharides and Polysaccharides:** Glycosidic bonds; Classification: glycoproteins, glycolipids; Nature of carbohydrate moiety attached; Functions: as cell recognition factors, in intracellular targeting; Purification and Characterization of oligosaccharides from cell membranes; Homopolysaccharides, Heteropolysaccharides; Purification and Characterization of polysaccharides from biological systems.<br>**Metabolism of carbohydrates:** Introduction, Aerobic and anaerobic pathways: Glycolysis and its regulation, Gluconeogenesis and its regulation. TCA cycle - Regulation, Glyoxylate cycle, amphibolic and anaplerotic reactions. Electron Transport chain, Oxidative phosphorylation, and production of ATP, Inhibitors of ETC and ATP synthesis, Photosynthesis – 'light' and 'dark' reactions<br>**PROTEINS and NUCLEIC ACIDS:** Protein structure and function**;** Fibrous protein: (Collagen), Membrane Protein (ATP synthetase); Protein structure and molecular approach to medicine: introduction (Sickle cell anaemia, p53 and its role in Cancer).<br>**Nucleic acid structure and function:** Supercoiling of the DNA molecule; topoisomers and superhelixes; Higher orders of DNA Structure: Chromatin Structure: Histones and Nucleosomes; Tandem repeats (Satellites, minisatellites, and microsatellites), Interspersed repeats (LINE, SINEs) Single copy genes; RNA Structure: Types of RNA; structure of mRNA, tRNA and rRNA, Si RNA, micro RNA with emphasis on importance of structure to its function.<br>**LIPIDS:** Structure and function of Glycerophospholipids and Glycosphingolipids, CDP-diacylglycerol, Lung surfactants. Eicosanoids: Prostaglandins, Leukotrienes and Thromboxanes: Chemistry, formation and physiological function.<br>**Steroids:** Steroids in animal system: Glucocorticoids, mineralocorticoids and Sex hormones (Site of biosynthesis, functions and mechanism of action; Sterols in Plant system: Phytohormones: Brassinosterroids (functions); Sterols in microbial system. |

| Course Code | **BSE 612** |
| Title of the Course | **Immunology and Immunotechnology** |
| Credit Structure | L-T-P-Credits<br>2-1-0-3 |
| Name of the Concerned Department | Biosciences and Biomedical Engineering |
| Pre–requisite, if any | Open to all graduates, with the prior permission of course instructor. |
| Scope of the Course | This course deals with immune systems and their components at the cellular and humoral levels. Furthermore, this course deals with the practical aspects such as the production and engineering of antibodies, the application of antigens, the design of (recombinant) vaccines, strategies for immune intervention, etc. |
| Course Syllabus | **Introduction to immunology**. Cells & organs of immune system-lymphoid cells, B and T lymphocytes, null cells. Mononuclear cells- phagocytosis, antimicrobial and cytotoxic activities. Granulocytes- neutrophils, eosinophils and basophils. Mast cells, dendritic cells. Organs of immune system- primary and secondary lymphoid organs.<br><br>**Immunoglobulins:** Structure and function-basic and fine structures of immunoglobulins. Isotypes, allotypes and idiotypes Classification of immunoglobulins. Genetic control of antibody response. Generation of antibody diversity. Theories of antibody formation. Clonal selection theory.<br><br>Antigen-antibody interaction- strength of antigen-antibody interaction, cross reactivity, precipitin reactions. Radioimmunoassays (RIA). Enzyme linked immunosorbent assay (ELISA). Western blotting. immunoelectron microscopy. Complement proteins, complement features, classical and alternative pathways.<br><br>**Major histocompatibilty complex** (**MHC**): Structure and its significance. Transplantation immunity- immunological basis of graft rejection, xenotransplantation. Clinical manifestation of graft rejection. General and specific immuno suppressive therapy. Clinical transplantation. Hypersensitivity- type I, II, III, and IV hypersensitivity.<br><br>**Autoimmunity**: Basis of autoimmune disorders, mechanism for the induction of autoimmunity. Treatment of autoimmune diseases. Immune response to infectious diseases. Antigen presentation via Class I and Class II pathways. Th1/ Th2 polarities, NK Effector Mechanism. Apoptosis.<br>Monoclonal antibodies- production role and advantages of monoclonal antibodies. Detailed account on the application and uses of monoclonal antibodies. Humanization of antibodies.<br><br>**Cancer Immunology:** Role of cytotoxic T lymphocytes in cancer immunology. AIDS pathogenesis, immunology of retroviruses, role of chemokines in management of AIDS. Vaccine technology, active and passive immunity, development of vaccine against infectious diseases. |

| **Title of the course** | **Omics Technologies** |
| Credit Structure | L - T - P - Credits<br>2-1-0-3 |
| Name of the Concerned Discipline | Biosciences and Biomedical Engineering |
| Pre-requisite, if any | NA |
| Scope of the course | This course is designed for the students with the background in biology, chemistry and computer science. This course will emphasize at molecular level changes through the studies of Genomics, Transcriptomics, Proteomics, Metabolomics, Glycomics and Lipidomics. The goal of this course is to explain the details of modern OMICS technologies and their applications which control structure, function, and dynamics of organisms. |
| Course Syllabus | OMICS: Introduction of omics, types of omics, methods to study, experimental approaches, bioinformatics algorithm. Genomics: Gene, Genome and their genomics, Status of genomics project, genome annotation, genome database, Prediction for transcription factor binding sites, Bioinformatic analysis for miRNA target and motif search, Single nucleotide polymorphisms (SNP) in bio-medical research. Transcriptomics: Principle and applications of experimental techniques: micro-arrays, Expressed Sequence Tag (EST), Serial analysis of gene expression (SAGE), tissue arrays. Data analysis and normalization through bioinformatics methods. Publicly available micro-arrays expression data. Proteomics: Principle and applications of proteomics technologies: 2D-electrophoresis, MALDI-TOF mass spectrometry, yeast 2-hybrid system. Protein-protein interactions, Protein-DNA interaction, Protein-RNA interaction. Computational prediction of interactions, protein databases. Metabolomics: Principles and applications of technologies in metabolomics: High-performance liquid chromatography (HPLC), Gas Chromatography, Mass Spectrometry, Nuclear Magnetic Resonance. Metabolic pathways resources, Metabolic health, and complications. Glycomics and Lipidomics: Principles and applications. Instrumentation and arrays to understand these structural changes in leaving organism. |

| Credit Structure | L - T - P - Credits<br>2-1-0-3 |
| Name of the Concerned Discipline | Biosciences and Biomedical Engineering |
| Pre-requisite, if any | Basic Biology and Chemistry (Undergraduate level) |
| Scope of the course | This course is designed to build a bridge between Chemistry and Biology. Understanding the chemical logic behind biology is extremely important as it allows us to predict consequences in physiological context. Emphasis will be given on understanding the fundamental concepts for using the chemical toolbox to uncover the functions of living systems at both mechanistic and molecular level. |
| Course Syllabus | Introduction to Chemical Biology? Difference between Biochemistry and Chemical Biology; Metabolic regulations; Warburg effect; Activity-based protein profiling to study orphan enzymes and its importance in drug discovery; Bio-orthogonal approaches in biology; Protein-protein interaction; Stable-isotope labeling for probing metabolism; Metabolomics-assisted proteomics; Quantitative proteomics; Chemo-proteomic platform; Incorporation of unnatural amino acids; Chemical toolbox to study protein post-translational modifications; Targeted protein degradation in live cells; Native chemical ligation: A tool for chemical protein synthesis; Small molecules in important biological discoveries; Introduction to PyMOL. |

| Credit Structure | L - T - P - Credits<br>2-1-0-3 |
| Name of the Concerned Discipline | Biosciences and Biomedical Engineering |
| Pre-requisite, if any | NA |
| Scope of the course | This course is designed for the students with the background in biology, chemistry, physics, or computer science and who are interested in learning biomolecular modeling. The goal of the course is to introduce the principles of biomolecular modeling and to develop practical skills for using existing modeling software. |
| Course Syllabus | Elements of thermodynamics and statistical mechanics: laws of thermodynamics, entropy, ensembles in statistical mechanics: microcanonical, canonical, and grandcanonical ensembles, Partition function, Maxwell-Boltzmann distribution, Phase space. Introduction to stochastic phenomena: Gaussian noise, Brownian motion, diffusion (Fokker-Planck equation), Euler algorithm for Brownian motion. Molecular Mechanics: introduction, Morse potential, Harmonic Oscillator Model for molecules, Energy due to stretch, bend, stretch-bend, torsional strain, van der Waals and Dipole-Dipole interactions. Types of Force fields: AMBER, CHARMM, GROMOS, OPLS, Merck Molecular Force Field, Consistent Force Field, MM2, MM3, and MM4 force fields, force field optimizations. Potential Energy Surface:- Convergence Criteria, Optimization Criteria, Unidirectional Search, Finding Minimum Point, Gradient based Methods-Steepest Descent and Conjugate Gradient Methods Molecular Dynamics Simulations: Introduction, Newtonian dynamics, Integrators- Leapfrog and Verlet algorithm, Thermostats and barostats, Implicit and explicit solvation models, periodic boundary conditions, Ewald's summation for electrostatistics, radial distribution functions, pair correlation function. Biased sampling: umbrella sampling and steered MD simulations. Free energy calculations: molecular recognitions, protein-drug interactions, Molecular Mechanics-Poisson-Boltzmann (Generalized Born) Surface Area (MMPBSA/MMGBSA), Free Energy Perturbation, Thermodynamic Integration (TI). |

| Credit Structure | L-T-P-Credits<br>2-0-2-3 |
| Name of the Concerned Department | Biosciences and Biomedical Engineering |
| Pre–requisite, if any | None |
| Scope of the course | In this course we will explore the use of statistical methodologies in designing, analyzing, interpreting, and biological experiments and observations. The course will cover descriptive statistics, probability, hypothesis testing and statistical interference, analysis of variance, correlation, and regression techniques. |
| Course Syllabus | **Biostatistics:** Introduction to Biostatics: Variable and attribute; Population vs. sample; Census vs. sample survey; Arrangement of data; Frequency distribution. Graphical presentation of data. Measure of central tendency: Arithmetic mean; Mode; Median. Measure of dispersion: Variance; Standard deviation; Standard error of mean; Standard score. Testing of hypothesis and goodness of fit: Null hypothesis; Level of significance; Probability, Normal distribution, Error of inference, Student's t-test, Fisher's t-test, Chi-square test. Correlation, Regression and Analysis of variance (ANOVA)<br>**Bioinformatics:** Introduction to Bioinformatics with historical background, major developments. Biological data and databases, data query and data mining; Nucleic acid and protein sequence databases,<br>**Sequence analysis**: Basic concept of sequence similarity, identity, and homology; Scoring matrices: basic concept of a scoring matrix, matrices for nucleic acid and protein sequences, PAM, and BLOSUM series, matrix derivation method and principles.<br>**Sequence alignment**: Basic concept of sequence alignment, Needleman and Wunsch, Smith and Waterman algorithms for pairwise alignments, gap penalties, applications to nucleic acid and protein sequences, basic concepts of various approaches for multiple sequence alignment (M.S.A), algorithm for CLUSTALW and PileUp and their application for sequence analysis, etc.<br>**Biological network**: Basic concepts of network, Protien-protien interaction networks, gene regulatory networks, signal transduction networks, etc.<br>**Simulation methods**: Monte Carlo (MC) and Molecular Dynamics (MD) simulations of biological macromolecules. |

| Pre–requisite, if any | Nil |
| Course Objective | The objectives of this course are to introduce students to the principles, practices and application of animal biotechnology, plant tissue culture, plant and animal genomics, genetic transformation and molecular breeding of plants and animals. |
| Course Syllabus | **Plant Tissue Culture And Animal Cell Culture:** Plant tissue culture: totipotency; organogenesis; Somatic embryogenesis; establishment of cultures, media preparation; sterilization techniques; applications of tissue culture - micropropagation; somaclonal variation; androgenesis and its applications in plant breeding; germplasm conservation and cryopreservation; synthetic seed production; protoplast culture and somatic hybridization - protoplast isolation; somatic hybridization; cybrids and somatic cell genetics; plant cell cultures for secondary metabolite production.<br>**Animal Cell Culture:** brief history of animal cell culture; cell culture media and reagents; culture of mammalian cells, tissues and organs; primary culture, secondary culture, continuous cell lines, suspension cultures; application of animal cell culture for virus isolation and in vitro testing of drugs, testing of toxicity of environmental pollutants in cell culture, application of cell culture technology in production of human and animal viral vaccines and pharmaceutical proteins.<br>**Plant Genetic Manipulation:** Genetic engineering: Agrobacterium-plant interaction; virulence; Ti and Ri plasmids; opines and their significance; T- DNA transfer; disarmed Ti plasmid; Genetic transformation - Agrobacterium-mediated gene delivery; cointegrate and binary vectors and their utility; direct gene transfer methods; markers for screening and selection; characterization of transgenics; chloroplast transformation; marker-free methodologies; advanced methodologies - cisgenesis, intragenesis and genome editing; molecular pharming - concept of plants as bio factories.<br>**Animal Reproductive Biotechnology And Vaccinology:** Animal reproductive biotechnology: structure of sperms and ovum; cryopreservation of sperms and ova; artificial insemination; super ovulation, embryo recovery and in vitro fertilization; culture of embryos; cryopreservation of embryos; embryo transfer technology; transgenic manipulation of animal embryos; applications of transgenic animal technology; animal cloning; Vaccinology: history of development of vaccines, conventional methods of animal vaccine production, recombinant approaches to vaccine production, modern vaccines.<br>**Plant and animal Genomics:** Overview of genomics – definition, complexity and classification; need for genomics level analysis; methods of analyzing genome at various levels – DNA, RNA, protein, metabolites and phenotype; genome projects and bioinformatics resources for genome research – databases; overview of forward and reverse genetics for assigning function for genes.<br>**Molecular Mapping And Marker Assisted Selection**: Molecular markers - hybridization and PCR based markers RFLP, RAPD, STS, SSR, AFLP, SNP markers; DNA fingerprinting; introduction to mapping of genes/QTLs; strategies for Introducing genes of biotic and abiotic stress resistance in plants: genetic basis for disease resistance in animals; molecular diagnostics of pathogens in plants and animals; detection of meat adulteration using DNA based methods.<br><br>**Laboratory:** |

| | |
|---|---|
| | **Plant Cell Culture:**<br>1. Prepare culture media for plant tissue culture and prepare explants of *Valleriana wallichii* for inoculation. Attempt in vitro andro and gynogenesis in plants (*Datura stramonium*).<br>2. Isolate plant protoplast by enzymatic and mechanical methods and attempt fusion by PEG.<br>3. Culture Agrobacterium tumefaciens and attempt transformation of any dicot species.<br>4. Generate an RAPD and ISSR profile of *Eremurus persicus* and *Valleriana wallichii*.<br>5. Prepare karyotypes and study the morphology of somatic chromosomes of Allium cepa, A. sativum, A. tuberosum and compare them on the basis of karyotypes.<br>6. Undertake plant genomic DNA isolation by CTAB method and its quantitation<br>7. Perform PCR amplification and study genetic fingerprinting profiles of plants and calculate polymorphic information content.<br><br>**Animal Cell Culture:**<br>1. Count cells of an animal tissue and check their viability. Prepare culture media with various supplements for plant and animal tissue culture.<br>2. Prepare single cell suspension from spleen and thymus. Monitor and measure doubling time of animal cells.<br>3. Chromosome preparations from cultured animal cells. Isolate DNA from animal tissue by SDS method. Attempt animal cell fusion using PEG. |

| Title of the Course | **Bioprocess Engineering and Technology** |
| Credit Structure | L-T-P-Credits<br>2-0-4-4 |
| Name of the Concerned Department | Department of Biosciences and Biomedical Engineering |
| Pre–requisite, if any | None |
| Course Objective | The objectives of this course are to educate students about the fundamental concepts of bioprocess technology and its related applications, thus preparing them to meet the challenges of the new and emerging areas of biotechnology industry. |
| Course Syllabus | **Basic principles of biochemical engineering:** Isolation, screening and maintenance of industrially important microbes; microbial growth and death kinetics (an example from each group, particularly with reference to industrially useful microorganisms); strain improvement for increased yield and other desirable characteristics.<br>**Stoichiometry and models of microbial growth:** Elemental balance equations; metabolic coupling – ATP and NAD+; yield coefficients; unstructured models of microbial growth; structured models of microbial growth.<br>**Bioreactor design and analysis:** Batch and continuous fermenters; modifying batch and continuous reactors: chemostat with recycle, multistage chemostat systems, fed-batch operations; conventional fermentation v/s biotransformation; immobilized cell systems; large scale animal and plant cell cultivation; fermentation economics; upstream processing: media formulation and optimization; sterilization; aeration, agitation and heat transfer in bioprocess; scale up and scale down; measurement and control of bioprocess parameters.<br>**Downstream processing and product recovery:** Separation of insoluble products - filtration, centrifugation, sedimentation, flocculation; Cell disruption; separation of soluble products: liquid-liquid extraction, precipitation, chromatographic techniques, reverse osmosis, ultra and micro filtration, electrophoresis; final purification: drying; crystallization; storage and packaging.<br>**Fermentation economics:** Isolation of micro-organisms of potential industrial interest; strain improvement; market analysis; equipment and plant costs; media; sterilization, heating and cooling; aeration and agitation; bath- process cycle times and continuous cultures; recovery costs; water usage and recycling; effluent treatment and disposal.<br>**Applications of enzyme technology in food processing:** Mechanism of enzyme function and reactions in process techniques; enzymatic bioconversions. e.g. starch and sugar conversion processes; high-fructose corn syrup; interesterified fat; hydrolyzed protein etc. and their downstream processing; baking by amylases, deoxygenation and desugaring by glucoses oxidase, beer mashing and chill proofing; cheese making by proteases and various other enzyme catalytic actions in food processing.<br>**Applications of microbial technology in food process operations and production, biofuels and biorefinery:** Fermented foods and beverages; food ingredients and additives prepared by fermentation and their purification; fermentation as a method of preparing and preserving foods; microbes and their use in pickling, producing colours and flavours, alcoholic beverages and other products; process wastes-whey, molasses, starch substrates and other food wastes for bioconversion to useful products; bacteriocins from lactic acid bacteria – production and applications in food preservation; biofuels and biorefinery.<br><br>**Laboratory**:Basic Microbiology techniques; Scale up from frozen vial to agar plate to shake flask culture; Instrumentation: Microplate reader, spectrophotometer, microscopy. |

| | |
|---|---|
| | Isolation of microorganisms from soil samples; Experimental set-up; Assembly of bioreactor and sterilization; Growth kinetics; Substrate and product inhibitions; Measurement of residual substrates; Data Analysis; Introduction to Metabolic Flux Analysis (MFA); Fermentation Batch Fed-batch; Continuous Unit operations; Microfiltrations: Separation of cells from broth; Bioseparations: Various chromatographic techniques and extractions; Bioanalytics:<br>Analytical techniques like HPLC, FPLC, GC, GC-MS etc. for measurement of amounts of products/substrates. |

| Title of the Course | **Genetics** |
| Credit Structure | L-T-P-Credits<br>2-0-0-2 |
| Name of the Concerned Department | Department of Biosciences and Biomedical Engineering |
| Pre–requisite, if any | None |
| Course Objective | The objectives of this course are to take students through basics of genetics and classical genetics covering prokaryotic/phage genetics to yeast and higher eukaryotic domains. On covering all classical concepts of Mendelian genetics across these life-forms, students will be exposed to concepts of population genetics, quantitative genetics encompassing complex traits, clinical genetics and genetics of evolution. |
| Course Syllabus | **Genetics of bacteria and bacteriophages:** Concept of a gene in pre-DNA era; mapping of genes in bacterial and phage chromosomes by classical genetic crosses; genetic complementation and other genetic crosses using phenotypic markers; phenotype to genotype connectivity prior to DNA-based understanding of gene.<br>**Yeast genetics:** Meiotic crosses, tetrad analyses, non-Mendelian and Mendelian ratios, gene conversion, models of genetic recombination, yeast mating type switch; dominant and recessive genes/mutations, suppressor or modifier screens, complementation groups, transposon mutagenesis, synthetic lethality, genetic epistasis.<br>**Drosophila genetics as a model of higher eukaryotes:** Monohybrid & dihybrid crosses, back-crosses, test-crosses, analyses of autosomal and sex linkages, screening of mutations based on phenotypes and mapping the same, hypomorphy, genetic mosaics, genetic epistasis in context of developmental mechanism.<br>**Population genetics and genetics of Evolution:** Introduction to the elements of population genetics: genetic variation, genetic drift, neutral evolution; mutation selection, balancing selection, Fishers theorem, Hardy-Weinberg equilibrium, linkage disequilibrium; in-breeding depression & mating systems; population bottlenecks, migrations, Bayesian statistics; adaptive landscape, spatial variation & genetic fitness.<br>**Quantitative genetics of complex traits (QTLs):** Complex traits, mapping QTLs, yeast genomics to understand biology of QTLs.<br>**Plant genetics:** Laws of segregation in plant crosses, inbreeding, selfing, heterosis, maintenance of genetic purity, gene pyramiding. |

| Course Objective | Research and business belong together, and both are needed. In a rapidly developing life science industry, there is an urgent need for people who combine business knowledge with the understanding of science & technology. Bio-entrepreneurship, an interdisciplinary course, revolves around the central theme of how to manage and develop life science companies and projects. The objectives of this course are to teach students about concepts of entrepreneurship including identifying a winning business opportunity, gathering funding and launching a business, growing and nurturing the organization and harvesting the rewards. |
| Course Syllabus | **Introduction to intellectual property:** Patents, trademarks, copyright & related rights, industrial design, geographical indications, International framework for the protection of IP; IPs of relevance to biotechnology and few case studies; introduction to history of GATT, WTO, WIPO and TRIPS; patent databases - country- wise patent searches (USPTO, EPO, India); analysis and report formation.<br>**Basics of patents:** Indian Patent Act 1970; recent amendments; WIPO Treaties; Budapest Treaty; Patent Cooperation Treaty (PCT); procedure for filing a PCT and patent application; precautions before patenting-disclosure/non-disclosure - patent application- forms and guidelines including those of National Bio-diversity Authority (NBA) and other regulatory bodies; types of patent applications: provisional and complete specifications;<br>**Biosafety and Biosecurity:** Introduction to biological safety cabinets; primary containment for biohazards; GRAS organisms, biosafety levels of specific microorganisms; recommended biosafety levels for infectious agents and infected animals; Definition of GMOs &LMOs; principles of safety assessment of transgenic plants<br>**Bioethics:** Introduction, ethical conflicts in biological sciences, bioethics in health care, euthanasia, prenatal diagnosis, genetic screening, Bioethics in research – cloning and stem cell research, Human and animal experimentation, animal rights/welfare, Agricultural biotechnology - Genetically engineered food, environmental risk, Protection of environment and biodiversity biopiracy. |

| Credit Structure | L-T-P-Credits<br>2-1-0-3 |
| Name of the Concerned Discipline/Center | Biosciences & Biomedical Engineering |
| Pre–requisite, if any | None |
| Scope of the Course | The course offers rigorous training to develop expertise and skills using a range of concepts and techniques in drug discovery including target identification and validation, screening platforms, optimization of small molecule drugs and biotherapeutics, etc. Emphasis would be given to the importance of pharmacokinetics and pharmacodynamics related to drug usage. |
| Course Outcomes | 1. Fundamental understanding of bringing a new drug to market.<br>2. Obtain a sense of the science and state-of-the-art technologies underlying the discovery and development of drugs.<br>3. Develop and use critical thinking skills to consider the challenges that biopharmaceutical companies face when developing a new drug. |
| Course Syllabus | **Module 1**: Drug discovery as a process; Target identification; Target validation; Drug validation; Drug targets (Membrane proteins, DNA, RNA, Enzymes); Lead identification, modification, and high throughput screening (biological assays); Sources of active compounds; Biologics.<br>**Module 2**: Molecular Modelling; Ligand-based drug design (LBDD); Structure-based drug design (SBDD); Artificial Intelligence (AI) in drug discovery.<br>**Module 3**: Drug safety, efficacy, and risk/ benefit ratio, drug specificity, pharmacokinetics, drug metabolism, and pharmacodynamics; Clinical trial design and associated ethical considerations; Bioavailability; Pro-drugs; drug delivery.<br>**Module 4**: Ethics of human and animal experimentation; Intellectual property; Commercial considerations in drug development. |

| Scope of the course (Objectives) | Assessing sustainability of engineered systems is an integral part of engineering practice. This course will introduce multiple dimensions of sustainability analysis for engineered systems. Methods and tools to perform technical feasibility and economic viability analysis, environmental risk, resource sustainability and life cycle assessments. This course aims to provide practical insights through case studies. |
| Course Outcomes | After completing this course, a student will be able to<br>1. Describe various aspects of resilience and sustainability.<br>2. Evaluate technical feasibility for a technology.<br>3. Assess economic viability and resource sustainability of a technology.<br>4. Evaluate the environmental impacts of a given product/process using the life cycle impact assessment method. |
| Course Content | 1. Overview of sustainability: Definition of sustainability, various aspects of sustainability, Concepts of Rritam, svadharma and aparigraha, and lokasamgraha<br>2. Technical Feasibility: estimating theoretical maximum and best-case scenarios.<br>3. Economic Viability: Review of net present value, internal rate of return, payback period.<br>4. Resource Sustainability: Fresh water availability, types of water consumption, movement of virtual water, land use change, arable, marginal land, CRP lands, and forests and other resources<br>5. Environmental Impacts Assessment: Overview, methods, ISO 14040, LCI databases such as US LCI, Digital Commons, and Ecoinvent, Challenges in LC<br>6. Environmental Risk Assessment<br>7. Social Aspects of Sustainability: Policy and social aspects of sustainability.<br>8. Food-Energy Water Nexus: Understanding and solutions from Eurocentric and Bharateeya perspective<br>9. Understanding Resilience and Resilience Thinking |

| Course Objective | The emphasis of the lab is on understanding the principles behind experiments, the ability to design and execute experiments and time management. The purpose of various steps and project planning will be discussed. |
| Course Syllabus | 1. Isolate genomic DNA from *Bacillus subtilis* (or equivalent organism) genome<br>2. PCR amplification of *flgM* gene and analysis by agarose gel electrophoresis<br>3. Preparation of plasmid pET-28a from *E. coli* DH5a and gel analysis<br>4. Restriction digestion of vector (gel analysis) and insert with *Nco*I and *Xho*I<br>5. Vector and insert ligation, b. Transformation in *E. coli* DH5a.<br>6. Plasmid isolation and confirming recombinant by PCR and RE digestion.<br>7. Transformation of recombinant plasmid in BL21(DE3).<br>8. Induction of FlgM protein with IPTG and analysis on SDS-PAGE.<br>9. Purification of protein on Ni-NTA column and analysis of purification by SDS-PAGE.<br>10. Random primer labeling of *flgM* with Dig-11-dUTP<br>11. Southern hybridization of *B. subtilis* genome with probe and non-radioactive detection. |

| Course Code | **BSE 653** |
| Title of the Course | **Experimental Techniques Laboratory** |
| Course category | **Core** |
| Credit Structure | L-T-P-Credits 0-0-4-2 |
| Name of the Concerned Department | Biosciences and Biomedical Engineering |
| Pre–requisite, if any | Nil |
| Course Objective | To gain hands on experience of different experimental methods used in different domains of biomedical engineering area. |
| Course outcomes | At the end of the course, students will have practical experience on techniques and instrumentation in biomedical engineering domain |
| Course Syllabus | 1. Fabrication of Nanoparticles, Microspheres, and Liposomes, morphological characterization, Drug/molecule encapsulation efficiency measurement, and release testing<br>2. Imaging of biological specimen (cells, bacteria, etc.) using fluorescence staining and unstaining methods, physical parameter extraction from images.<br>3. Computer-aided design (CAD) using SolidWorks software, extrusion 3D bioprinting and prototyping: 3-D printed biomaterial scaffold development and evaluation<br>4. Tensile, compression, and flexure testing of biomaterials<br>5. Enzyme encapsulation and activity assay<br>6. Cell culture evaluation of nanoparticles for uptake and compatibility.<br>7. Protein and Nucleic Acid sequence analysis using web servers<br>8. Computer-aided drug design targeting a receptor protein<br>9. Nucleic acid based detection using polymerase chain reaction.<br>10. Biomedical Sensors development and characterization |

| Name of the Discipline | Biosciences and Biomedical Engineering |
| Pre–requisite, if any | Basic biology courses undergraduate level |
| Scope of the Course | This course aims to introduce basic laboratory techniques in microbiology (Bacteriology, Virology, Immunology) through experiments that will be conducted as Experimental Projects. |
| Course Syllabus | 1. Introduction to Light Microscopy, Laboratory Procedure for Microscopic Examination<br>2. Introduction to laboratory sterilization technique, Media Preparation; Bacterial Culture Media preparation and sterilization<br>3. Bacterial Isolation, Culturing Techniques and Microscopic Examination of Bacterial Morphology, Structures, Motility.<br>4. Antigen-Antibody Reactions; Agglutination and Precipitation Techniques<br>5. Introduction to virological methods and techniques. Animal cell culture techniques, cell propagation, cell counting, maintenance<br>6. Quantification of virus by plaque assay. Reverse transcription PCR techniques<br>7. Enzyme-Linked Immunosorbent Assay (ELISA) assay for viral antigen detection, Western Blot<br>8. Cell staining and immunoflurescence techniques, Image acquisition through epiflurescence techniques |

## Course Structure of 2-year M.Sc. and M.Sc. + Ph.D. Dual Degree Program in Astronomy (From AY 2018-19)

**Minimum Educational Qualification (MEQ):** Bachelor's degree in Physics or Mathematics or CSE or EE or ME **AND** JAM qualification in Physics.

**Qualifying Examination:**
**(a) International Students:** Valid score of TOEFL or IELTS, AND valid score of GRE.
**(b) Indian Students:** Valid JAM qualification in Physics.

**Eligibility Requirement (ER):** As per the brochure of Joint Admission test for M.Sc. (JAM).

**Categories of Admission:**
**(a) International Students:** (i) International self-financed **(ISF)** students; (ii) International students sponsored by non-government organizations or by a reputed industry **(ISW)**; (iii) International students sponsored by foreign government or its organizations or through mutual collaborative programs of India with other countries **(GSW)**
**(b) Indian Students:** Not Applicable

**Duration of the Program:** Two years on full-time basis.

### Course Structure for two-year Full-time M.Sc. Program in Astronomy

**1st Year: Semester-I**

| Course code | Course Title | Contact Hours (L-T-P) | Credits |
|---|---|---|---|
| PH 601 | Electrodynamics | 2-1-0 | 3 |
| PH 611 | Fundamental of Quantum Mechanics | 3-1-0 | 4 |
| PH 651 | Mathematical Methods | 2-1-0 | 3 |
| AA 601 | Astrophysical Fluids and Plasma | 2-1-0 | 3 |
| AA 651 | Astronomy Laboratory-I | 0-0-8 | 4 |
| AA 671N/ AA 471N | Relativity and Cosmology | 2-1-0 | 3 |
| | | **Total minimum credits during the semester** | **20** |
| **Additional course (as per the requirement basis)** | | | |
| HS 641 | English Communication Skills | 2-0-2 | PP/NP |

**1st Year: Semester-II**

| Course code | Course Title | Contact Hours (L-T-P) | Credits |
|---|---|---|---|
| AA 672N/ AA 472N | Galactic and Extragalactic Astronomy | 2-1-0 | 3 |
| AA 674N/ AA 474N | Radio Astronomy | 2-1-0 | 3 |
| AA 652 | Astronomy Laboratory-II | 0-0-8 | 4 |
| AA 698 | PG Seminar Course | 0-2-0 | 2 |
| ZZ XXX | Elective-I | 2-1-0 | 3 |
| ZZ XXX | Elective-II | 2-1-0 | 3 |
| | | **Total minimum credits during the semester** | **18** |

**2nd Year: Semester-III**

| Course code | Course Title | Contact Hours (L-T-P) | Credits |
|---|---|---|---|
| AA 799 | M.Sc. Research Project (Stage-I) | 0-0-36 | **18** |

**2nd Year: Semester-IV**

| Course code | Course Title | Contact Hours (L-T-P) | Credits |
|---|---|---|---|
| AA 800 | M.Sc. Research Project (Stage-II) | 0-0-36 | **18** |
| | | **Total minimum credits during the program** | **74** |

**Courses from Astronomy for Elective- I and II @**

| Course code | Course Name | Contact Hours (L-T-P) | Credit |
|---|---|---|---|
| AA 602 | Advanced Topics in Astronomy and Astrophysics | 2-1-0 | 3 |
| AA 604 / AA 404 | Spacecraft and Payload Attitude Dynamics, Control and Pointing | 2-1-0 | 3 |
| AA 606 | Random Signals and Applied Kalman Filtering | 2-1-0 | 3 |
| AA 608 | Astronomical Data Analysis | 2-1-0 | 3 |
| AA 676/ AA 476 | Satellite Based Navigation Systems | 2-1-0 | 3 |
| AA 678/ AA 478 | Space Weather | 2-1-0 | 3 |

**@** In addition to this course list, a student can also opt from the PG courses being offered by the other disciplines, after consultation with DPGC Convener / HoD / Supervisor

**NOTE:**

1. Request for conversion from M.Sc. to M.Sc. + Ph.D. dual degree will be considered after evaluating the research potential of the promising and motivated PG students at the end of the **third semester of their program.** The confirmation of conversion of M.Sc. program and to M.Sc. + Ph.D. dual degree program is done during 4$^{th}$ semester with subject to successfully qualifying CSIR/UGC-JRF or equivalent fellowship to enable receiving Ph.D. scholarship.
2. The enhancement in the scholarship from M.Sc. to Ph.D. will be from the beginning of the fifth semester or from the date on which all requirements for the award of M.Sc. degree are fulfilled AND candidate successfully qualifies CSIR/UGC-JRF or equivalent fellowship, whichever is later**.**
3. **If the** student opts for Dual Degree Program but cannot complete the requirements of a Ph.D., an **exit option** with the M.Sc. degree can be earned **before the specified date during the 4th semester** of the normal M.Sc. Program by getting the M.Sc. Research Project examined in the standard manner as per the requirements for the award of an M.Sc. degree.

**Course Structure of M.Tech., MTech + PhD Dual Degree Program in Space Engineering (from AY 2021-22)**

**Minimum Educational Qualification (MEQ):** Four-year Bachelor's degree or five-year integrated degree (with first division as defined by the awarding Institute/ University for Indian applicants and equivalent to International applicants, as assessed by the Institute) in Electronics and Communication/ Electronics/ Engineering Physics / Aerospace, or M.Sc. in Physics/ Electronics/ Atmospheric science. Relaxation as per GoI norms in qualifying degree is applicable for SC and ST category applicants.

**Qualifying Examination:**
(a) International students: Valid score of TOEFL or IELTS.
(b) Indian students: Valid GATE qualification in Aerospace Engineering/Electronics and Communication Engineering/ Physics/ Engineering Sciences (Engineering Mathematics + Fluid Mechanics/Material Science/ Thermodynamics/ Atmospheric and Oceanic Sciences)

**Categories of Admission:**
(a) International Students: (i) International self-financed (ISF) students; (ii) International students sponsored by non-government organizations or by a reputed industry (ISW); (iii) International students sponsored by foreign government or its organizations or through mutual collaborative programs of India with other countries (GSW)
(b) Indian Students: Teaching Assistantship (TA); (ii) Highly motivated sponsored candidate (SW) on full-time basis from highly reputed R and D organizations such as DRDO, ISRO, BHEL, C-DAC, ADE, ADA, etc. and highly reputed Industries; (iii) Defense Forces (DF): Candidates sponsored by the Defense Forces; (iv) Regular institute staff (IS) of IIT Indore on part-time basis only.

Candidates of SW, DF and IS categories will not be provided any scholarship.

**Selection criteria:** GATE Score and / or Interview. (Valid GATE score compulsory for TA category)

**Duration of the Program:** Two years full-time.

**Intake:** 10 TA, No upper limit on intake under non-TA category.

**Course Structure for M.Tech. (2 year) in Space Engineering**

**1st Year: Semester-I**

| Course code | Course Title | Contact Hours (L-T-P) | Credits |
|---|---|---|---|
| AA 603/ AA 403 | *Space Engineering System | 2-0-2 | 3 |
| AA 478/678 | Space Weather | 2-1-0 | 3 |
| AA 6XX/ AA 4XX | *Remote sensing for Atmospheric and Space Sciences | 2-0-2 | 3 |
| AA 605/ AA 405 | *Detectors and Sensors for Space Observations | 2-0-2 | 3 |
| ZZ XXX | Elective-I | x-x-x | 3 |
| ZZ XXX | Elective-II | x-x-x | 3 |
| **Total minimum credits earned during the semester** | | | **18** |
| **Additional course (as per the requirement basis)** | | | |
| HS 641* | English Communication Skills | 2-0-2 | PP/NP |

**1st Year: Semester-II**

| Course code | Course Title | Contact Hours (L-T-P) | Credits |
|---|---|---|---|
| AA 608 | Astrostatistics | 2-1-0 | 3 |
| AA 404/ AA 604 | Spacecraft and Payload Attitude Dynamics, Control and Pointing | 2-1-0 | 3 |
| AA 676/AA 476 | Satellite Based Navigation Systems | 2-1-0 | 3 |
| ZZ XXX | Elective-III | x-x-x | 3 |
| ZZ XXX | Elective-IV | x-x-x | 3 |
| AA 6XX | PG Seminar Course | 0-2-0 | 2 |
| **Total minimum credits earned during the semester** | | | **17** |

**2nd Year: Semester–III**

| Course code | Course Title | Contact Hours (L-T-P) | Credits |
|---|---|---|---|
| AA 799 | M.Tech. Research Project (Stage–I) | 0-0-36 | 18 |
| **Total minimum credits to be earned during the semester** | | | **18** |

**2nd Year: Semester–IV**

| Course code | Course Title | Contact Hours (L-T-P) | Credits |
|---|---|---|---|
| AA 800 | M.Tech. Research Project (Stage–II) | 0-0-36 | 18 |
| **Total minimum credits to be earned during the semester** | | | 18 |
| **Total minimum credits to be earned during the program** | | | **71** |

**Courses for Elective I-IV@**

| Course code | Course Title | Contact Hours (L-T-P) | Credits |
|---|---|---|---|
| AA 606 | Random signals and applied Kalman Filtering | 2-1-0 | 3 |
| AA 601 | Astrophysical Fluids and Plasma | 2-1-0 | 3 |
| AA 471N/671N | Relativity and Cosmology | 2-1-0 | 3 |
| AA xxx | ***Computational Methods in Astronomy and Space Sciences** | 2-1-0 | 3 |
| AA 610/ AA 410 | Spatial Informatics | 2-0-2 | 3 |
| AA 612/ AA 412 | Microwave Remote Sensing | 2-1-0 | 3 |
| AA 474N/674N | Radio Astronomy | 2-1-0 | 3 |
| AA 672N /AA472N | Galactic and Extragalactic Astronomy | 2-1-0 | 3 |

@In addition to this course list, a student can also opt from the PG courses being offered by the other disciplines.

**Course Structure of MS (Research), MS (Researach) + Ph.D. dual degree in Space Sciences and Engineering (from AY 2021-22)**

**Minimum Educational Qualification:**
A four year bachelor's degree (BE or BTech), or a two years or five years integrated master's degree (MSc or MTech or ME) with first class or first division (as decided by the awarding institute/university), in Physics, Applied Physics, Astronomy, Astrophysics, Space Science and Engineering, Earth and Atmospheric Science and Engineering, Remote Sensing, Engineering Physics, Aerospace Engineering, Aeronautics, Electronics and Communications Engineering, Electrical Engineering.

**Qualifying Examination:**
(a) International Students: Valid score of TOEFL or IELTS.
(b) Indian Students: Valid GATE qualification in the relevant disciplines.
Relevant GATE papers: AE, EC, EE, PH, XE

**Categories of Admission:**
(a) **International Students:** (i) International self-financed (ISF) students; (ii) International students sponsored by non-government organizations or by a reputed industry (ISW); (iii) International students sponsored by foreign government or its organizations or through mutual collaborative programs of India with other countries (GSW)
(b) **Indian Students:** Teaching Assistantship (TA); (ii) Highly motivated sponsored candidate (SW) on full-time basis from highly reputed R & D organizations such as DRDO, ISRO, BHEL, C-DAC, ADE, ADA, etc. and highly reputed Industries; (iii) Defense Forces (DF): Candidates sponsored by the Defense Forces; (iv) Regular institute staff (IS) of IIT Indore on part-time basis only.

Candidates of SW, DF and IS categories will not be provided any scholarship

**Duration of Program:** 2 years on full-time basis with maximum extension of one semester.

**Intake:** 5 TA, No upper limit on intake under non-TA category.

**Evaluation of Research Work and Thesis:** Students are expected to identify their Thesis Supervisor(s) within one month of joining the programme so that PG Student Progress Committee (PSPC) can be formed and students can start research work from the beginning of the programme. Progress of the M.S. thesis will be monitored by PSPC through CERP to be conducted at the end of every semester with preferably Mid Semester evaluation as well. Final evaluation of M.S. thesis will be done by at-least one External Examiner. Student must have one journal publication in SCI index from his/ her M.S. thesis for completion of the degree.

**Programme Structure:**

**1st Year, Semester - I**

| Course Code | Course Name | Contact Hours (L-T-P) | Credit |
|---|---|---|---|
| AA XXX | Elective - I | X-X-X | 3 |
| ZZ XXX | Elective - II | X-X-X | 3 |
| ZZ XXX | Elective - III | X-X-X | 3 |
| AA 697 | PG Seminar Course | 0-2-0 | 2 |
| AA 791 | M S Thesis (Stage-1) | 0-0-14 | 7 |
| **Total minimum credits earned during the semester** | | | **18** |
| HS 641 | English Communication Skills | 2-0-2 | Non-credit course (with PP/NP grade) |

**1st Year, Semester - II**

| Course Code | Course Name | Contact Hours (L-T-P) | Credit |
|---|---|---|---|
| AA 792 | M S Thesis (Stage-2) | 0-0-36 | 18 |
| **Total minimum credits earned during the semester** | | | **18** |

**2nd Year, Semester - III**

| Course Code | Course Name | Contact Hours (L-T-P) | Credit |
|---|---|---|---|
| AA 793 | M S Thesis (Stage-3) | 0-0-36 | 18 |

| AA 472N/672N | Galactic and Extragalactic Astronomy | 2-1-0 | 3 |
| AA 602N | Astrostatistics | 2-1-0 | 3 |
| AA 405/ 605 | Detectors and Sensors for Space Observations | 2-1-0 | 3 |
| AA 603/AA 403 | Space Engineering System | 2-1-0 | 3 |
| AA 4XX /6XX | Remote sensing for Atmospheric and Space Sciences | 2-1-0 | 3 |
| AA 6XX | Computational Methods in Astronomy and Space Sciences | 2-1-0 | 3 |

**Course Structure for Ph.D. Program in Astronomy, Astrophysics and Space Engineering (w.e.f. AY 2018-19)**

**(for AY 2016-17 and 2017-18 referred as Centre of Astronomy)**

**(A) Semester-I (Autumn / Spring)**

| Sr. No. | Course code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1 | ZZ xxx | Elective-I | x-x-x-3 |
| 2 | ZZ xxx | Elective-II | x-x-x-3 |
| 3 | ZZ xxx | Elective-III | x-x-x-3 |
| 4 | AA 797* / AA 798* | Ph.D. Seminar Course | 0-2-0-2 |

**(B) Semester-II (Spring / Autumn)**

| Sr. No. | Course code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1 | ZZ xxx | Elective-IV | x-x-x-3 |
| 2 | ZZ xxx | Elective-V | x-x-x-3 |
| 3 | ZZ xxx | Elective-VI | x-x-x-3 |
| 4 | AA 798* / AA 797* | Ph.D. Seminar Course | 0-2-0-2 |

**Astronomy Courses for Elective I -VI** (In addition to these courses, a student can also choose from the Ph.D. courses being offered by the other disciplines.)

| Sr. No. | Course code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1 | AA 671N/ AA 471N/ IPH 471N/ PH 671N | Relativity and Cosmology | 2-1-0-3 |
| 2 | AA 672N/ AA 472N | Galactic and Extragalactic Astronomy | 2-1-0-3 |
| 3 | AA 674N/ AA 474N/ IPH 474N/ PH 674N | Radio Astronomy | 2-1-0-3 |
| 4 | AA 676/ AA 476 | Satellite Based Navigation Systems | 2-1-0-3 |

**NOTE:**

1. A Ph.D. student having **B.Tech./ B.E./ M.Sc.** or **equivalent qualification** admitted to Ph.D. Program in an Engineering discipline shall do 6-8 courses of at least 3 credits each and 1-2 Ph.D. Seminar courses of at least 2 credits each. Minimum number of courses will be 6 Ph.D. level courses and one Ph.D. seminar course (minimum coursework of 20 credits).

2. A Ph.D. student having **M.Tech./ME//MPhil** qualification has to do one semester coursework (with 2-3 Ph.D. level courses) Minimum number of courses will be 2 Ph.D. level courses and one Ph.D. seminar course (i.e. *(minimum coursework of 8 credits)*.

* Ph.D. Seminar course can be taken either in Autumn or in Spring Semester or both as suggested by the Faculty Advisor/ Thesis Supervisor.

| | | |
|---|---|---|
| 1. | Course Code | **AA 601** |
| 2. | Title of the Course | **Astrophysical Fluids and Plasma** |
| 3. | Credit Structure | L-T- P-Credits<br>2-1-0-3 |
| 4. | Name of the Discipline / Centre | Astronomy, Astrophysics and Space Engineering |
| 5. | Pre–requisite, if any | |
| 6. | Scope of the Course | This course aims to introduce students to the principles of astrophysical fluids with a focus of applying to astrophysical sources. The course also further extends to introduce the concept of plasma that are prevalent in astrophysical |
| 7. | Course Syllabus | **Introduction to Fluids:** Fluids as continuous medium, Local thermal equilibrium. Flow and velocity field, convective derivative. Equations of fluid dynamics (mass, momentum and entropy) for ideal fluids. Condition on equation of state for hydrostatic equilibrium. Convective instability and Schwarzschild's criterion. **Properties of flows:** Equations of fluid dynamics in conservation form. Streamlines and Bernoulli's equation with applications. Kelvin's circulation theorem, Vorticity in 2D and 3D flows, Rotating fluids: Coriolis force, geostrophic flows. *e.g:* Solar Wind and Bondi accretion/Accretion disc, von Ziepel's theorem, Taylor-Proudman theorem. **Linear Waves and Instability**: Sound waves: wave equation, dispersion relation. Gravity waves: derive the dispersion relation; discuss internal and surface gravity waves, Rayleigh-Taylor & Kelvin-Helmholtz instabilities e.g.: Inertial waves in a steadily rotating flow. **Navier-Stokes (NS) equation:** Non-ideal fluids: discuss at elementary kinetic theory level the origins of dissipation and transport, Derive equation for viscous energy conservation and entropy production. Boundary layers. Scaling in the NS equations: Reynolds number, Stokes flow past a sphere at low Re, transition to turbulence, phenomenological treatment of Kolmogorov cascade. **Supersonic flow:** De-laval nozzle, shock properties, Rankine-Hugoniot jump conditions, Cooling length and time, isothermal shocks. Sedov-Taylor blast wave, Supernova shocks: Adiabatic and momentum conserving phases of evolution. **Convection:** Thermal diffusivity and its effect on the entropy equation. Conductive and convective transport of heat equation. Mixing length theory and transport of heat, application to plane-parallel atmospheres and stars. Rayleigh-Benard convection. **Introduction to Plasmas** Particle orbit theory and adiabatic invariants. 2-component plasmas. Debye shielding and length in a plasma in thermal equilibrium. Cold plasma oscillations. **Magnetohydrodynamics** Derivation of induction equation, |

|---|---|
| Course Code | **AA 604/ AA 404** |
| Title of the Course | **Spacecraft and Payload Attitude Dynamics, Control and Pointing** |
| Credit Structure | L-T- P-C 2-1-0-3 |
| Name of the Discipline / Centre | Astronomy, Astrophysics and Space Engineering |
| Pre-requisites (if any) | |
| Course Syllabus | Three-axis Spacecraft Attitude dynamics; quaternions and other representations. Multi-body spacecraft with articulated antennas, sensors, and solar arrays. Design of spacecraft controllers with reaction wheels, magnets, single- and double-gimbaled control moment gyros as actuators. Three-axis large angle manoeuvres. Payload controllers for acquiring, precision pointing, and high-accuracy tracking of landmarks and moving objects of interests for remote sensing and communication. Pointing error budget. Image motion compensation to remove image blur. Solar array controllers for tracking the Sun using micro-stepper motors. Flexible spacecraft dynamics and control. Dynamics and control of spinning spacecraft: stability, precession and nutation. Control of spin-axis attitude during $\Delta$V-firing for changing orbits; active nutation control; dual-spin stabilization; Rhumb-line manoeuvre. Dynamics and precision pointing of bias momentum spacecraft: stability; control using two momentum wheels and a reaction wheel. Reaction jet attitude control and nonlinear controllers: pulse-width-pulse-frequency modulators; minimum-fuel-minimum-time single-axis and three-axis control. Control of spacecraft with liquid propellants: sloshing-control interaction. |

| Course code | **AA 609** |
| Title of the course | Computational Methods in Astronomy and Space Sciences |
| Credit Structure | L - T - P -credits<br>2-1-0 3 |
| Name of the Concerned Discipline | Astronomy, Astrophysics and Space Engineering |
| Prerequisite, if any | None |
| Scope of the course | This course is aimed at introducing the various methods that are employed in astrophysical codes. Further, application of these methods in studying processes in the arena of space science will be given as case studies. The versatile nature of techniques taught as part of this course will help students gain insight into modelling tools used in relevant industries. |
| Course Syllabus | **Fundamentals:** Review of numerical integration, differentiation, root finding, ODE solvers, Hyperbolic, Parabolic and Elliptic Equations and their applications in Astrophysics and Space. Errors in Numerical computations<br>**Grid Based Computations:** Upwind scheme for Advection Equation and Burger Equation, Godunov scheme for Hydrodynamic Equations, Reconstruction schemes and Reimann Solvers; Shock capturing schemes, Adaptive and Multi-grid methods, Divergence Cleaning Methods, Computational Algorithms for Relativistic flows, Time Stepping schemes.<br>**Source Term Modelling:** Radiative Transfer: Ray Tracing Approach, Flux limited diffusion, Operator Splitting (Strang Splitting Method), Turbulent Forcing<br>**Particle Based Methods:** Algorithms for N-body simulations, Smoothed Particle Hydrodynamics, Kernel Smoothing methods, Algorithms for Particle in Cell Method (PIC)<br>**Applications:** Solver for Advection and Burger Equation, Astrophysical Fluid Instabilities, Time evolution of the Trojan satellites of Jupiter using N-body simulations, Setting Cosmological Initial condition, N-body simulation for a pressureless fluid, Modelling 1D spherical collapse under self-gravity, spherically symmetric blast wave for supernova remnants, 1D radiative transfer modelling for Ionization. |

|---|---|
| **Course code** | **AA 611 / AA 411** |
| **Title of the course** | **Advanced Optics** |
| Course Category | Core |
| Credit Structure | L - T - P - Credits<br>2-0-2-3 |
| Name of the Concerned Department | Astronomy, Astrophysics and Space Engineering |
| Pre-requisite, if any | None |
| Scope of the course (Objectives) | Theoretical and technical concepts behind optical systems |
| Course Outcomes | This course will help students develop skills in the design/development of solutions and real-life optics related problem analysis. This course will further give students engineering knowledge related to optical and laser systems. |
| Course Content | 1. Geometrical Optics & Ray Tracing : Optical system design, raytracing, spot-size diagram and MTF. Optical aberrations, tolerancing and optical design optimisation.<br><br>2. Wave Optics : Concepts of wavefront and phase, complex representation of electromagnetic wave, image formation and spatial resolution, optical path and spatial coherence, monochromaticity and temporal coherence. Interference and diffraction, Fourier Optics. concept of spatial filtering, amplitude and phase filters in spatial frequency domain, image processing. Shack-Hartman wave-front sensor, Zernike decomposition, wavefront correction, deformable optics.<br><br>3. Polarization : Stokes parameter, birefringence, Faraday rotation, Jones matrix, Berry phase and Panchratan sphere<br><br>4. Laser Interferometry : Two beam (Michelson) and multi-beam (Fabry-Perot), interferometers, Fizeau and white light interferometry, principles of phase shifting techniques and phase un-wrapping. |

| | |
|---|---|
| | Standard Quantum Limits (SQL) of interferometers and sub-SQL measurements. Scanning white light interferometer (SWLI), Doppler velocimetry and Velocity Interferometer System for Any Reflector (VISAR). Stellar interferrometry, Synthetic aperture optical telescope<br><br>5. Optical systems : Applications, Waveguides, Holographic systems etc., adaptive optics<br><br>Typical list of experiments:<br>• Using Michelson's interferometer determine the wavelength of an unknown source.<br>• White light interferometry with Michelson's interferometer.<br>• Using Michelson's interferometer determine the thickness of a thin glass plate or a thin film.<br>• Use a Fabry-Perot interferometer to study Zeeman effect.<br>• Verify Malus law.<br>• Wavefront sensor |

| 6 | Scope of the Course | This course aims to introduce students to cosmology through an understanding of the General Theory of Relativity. Special emphasis will be placed on linear perturbation theory in the early universe, leading to the formation of the cosmic microwave background, as this illustrates basic undergraduate physics in the context of the frontiers of research in cosmology. |
| 7 | Course Syllabus | **1. Special Relativity:** Michaelson-Morley Experiment, Galilean vs. Lorentz transformations, Lorentz invariance, scalars in special relativity, relativistic dynamics, acceleration in special relativity<br>**2. Cosmology:** Olber's paradox; difficulty with Newtonian cosmology; brief introduction to general theory of relativity, especially the line element; Schwarzschild metric, horizon, orbits, Hawking radiation; FRW metric as a consequence of cosmological principle; redshift, angular and luminosity distances; evolution of scale factor from Newtonian cosmology; density parameter; LCDM cosmology; flatness and horizon problems, basics of inflation theory; thermal history of the Universe, big bang nucleosynthesis; microwave background. **3. Structure formation:** Jeans instability in an expanding background; initial perturbation and anisotropies in CMBR, formation of dark matter halos, galaxy formation and star formation; millennium simulation; Sunyaev-Zeldovich effect; neutral hydrogen and other elements in the IGM, Lyman α forest and damped clouds; reionization, AGN/star-formation history of the universe; Gunn-Peterson effect. |

| 6. | Scope of the course | This is a contemporary course on GPS-Aided Geostationary Augmented Navigation (GAGAN) and Navigation with Indian Constellation (NAVIC) satellite-based navigation systems of the country and how they will be used for navigation of land, air and space vehicles. |
| 7. | Course Syllabus | Review of satellite-based navigations: GPS (Global Positioning System), IRNSS (Indian Regional Navigation Satellites System). GPS measurements and error sources; Code phase and carrier phase measurements. Ionospheric and tropospheric delay models; receiver clock error model; User range error; Combining code and carrier phase measurements – carrier-aided smoothing. Differential GPS, local-area DGPS, relative positioning; wide-area DGPS; Indian navigation system GAGAN (Geostationary Augmented GPS Aided navigation). Position, velocity and time estimation with pseudorange and pseudorange rate measurements. Precise positioning with carrier phase, with integer ambiguity resolution using code measurements and dual- and three-frequency measurements; LAMBDA method. Differential GPS-aided INS for flight vehicles: Code and carrier double-differencing, triple-differencing. Integration of differenced observables with inertial navigation (INS); GPS-Aided INS for precise aircraft landing. Tightly coupled GPS/INS integration for missiles and launch vehicle navigation. Absolute and relative navigation with GRAPHIC technique for satellites rendezvous. Unmanned Aerial Vehicle (UAV) and Micro Air Vehicle (MAV) navigation. Spinning sounding rocket navigation. Submarine navigation |

| Name of the Concerned Department | AASE |
| Pre-requisite, if any | Nil |
| Scope of the course (Objectives) | Introduce the concepts and connections among atmosphere, ocean, and climate. The course also gives an idea about the energy transfer, stability and circulations present in the atmosphere and oceans and the causal relationship to climate change. |
| Course Outcomes | Students will learn about the physics and mathematics of atmosphere and oceans, and their role in climate in order to analyse and model the climate change implications. |
| Course Content | Module 1: Climate system and its components, Structure of the atmosphere and physical properties, Energy balance, hydrological and carbon cycles, Stability and waves.<br>Module 2: The general circulation of the atmosphere, Ocean and its circulation, Climate and climate variability. |

# Intelligent Transport Systems
# (CEVITS)
# and Syllabi of Courses

**Course Structure of M.Tech. and M.Tech. + Ph.D. dual degree program in Electric Vehicle Technology from AY 2021-22**

**Minimum Educational Qualification:** Four-year Bachelor's degree or five-year integrated degree (with first division as defined by the awarding Institute/ University for Indian applicants and equivalent to International applicants, as assessed by the Institute) in Mechanical/Electrical/ Electronics and Communication/Automobile/Instrumentation and Control/Electronics/ Instrumentation//Production/Mechatronics Engineering. *Relaxation as per GoI norms in qualifying degree is applicable for SC and ST category applicants.*

***Qualifying Examination:***

**(a) International students:** Valid score of TOEFL or IELTS.

**(b) Indian students:** Valid GATE qualification in Mechanical (ME)/Electrical (EE)/Electronics and Communication (EC)/Production and Industrial (PI)/Instrumentation (IN) Engineering/Engineering Sciences (XE; Engineering Mathematics with Fluid mechanics/Material Science/Solid mechanics/Thermodynamics)

***Categories of Admission:***

**(a) International Students:** (i) International self-financed **(ISF)** students; (ii) International students sponsored by non-government organizations or by a reputed industry **(ISW)**; (iii) International students sponsored by foreign government or its organizations or through mutual collaborative programs of India with other countries **(GSW)**

**(b) Indian Students:** Teaching Assistantship **(Non-TA)**; (ii) Highly motivated sponsored candidate **(SW)** on full-time basis from highly reputed R and D organizations such as DRDO, ISRO, BHEL, C-DAC, ADE, ADA, etc. and highly reputed Industries; (iii) Defense Forces **(DF)**: Candidates sponsored by the Defense Forces; (iv) Regular institute staff **(IS)** of IIT Indore on part-time basis only.

***Candidates of Non-TA, SW, DF and IS categories will not be provided any scholarship.***

**Duration of Program:** 2 years on full-time basis.

**Selection criteria:** GATE Score and/ or Interview. (Valid GATE score compulsory for Non-TA category)

**Total Intake:** 10 TA, No upper limit on intake under non-TA category.

**1st Year: Semester-I**

***Already approved course**

**†** In addition to this course list, a student can also opt from the PG courses being offered by the other disciplines.

**NOTE:**
1. Request for conversion from MTech to MTech + PhD dual degree will be considered after evaluating the research potential of the promising and motivating PG students at the end of the **third semester of their program.**
**2.** If the student opts for the Dual Degree Programme but cannot complete the requirements of a PhD, an **exit option** with the MTech Degree can be earned at the end of the final semester of the normal MTech Programme by getting the MTech Research Project examined in the standard manner as per the requirements for the award of an MTech degree.
**3.** The enhancement in the scholarship from MTech to PhD will be from the beginning of the fifth semester or from the date on which all requirements for the award of MTech degree are fulfilled whichever is later**.**

**Course Structure of Ph.D. Program in Electric Vehicle Technology by Center of Electric Vehicles and Intelligent Transportation Systems (CEVITS) (from AY 2023-24)**

**Minimum Educational Qualifications (MEQs):** Masters' degree (with first division as defined by the awarding Institute/ University) in the relevant areas of Engineering/Sciences (Mechanical Engineering/Technology- Machine/system design/ Thermal Engineering/ Heat Power/Energy Materials/ Fluids & Thermal Engineering/ Manufacturing Engineering/ Industrial Engineering/ Production Engineering/ Reliability Engineering/ CAD/CAM/ Automobile Engineering; Metallurgical Engineering/ Material Science and Engineering/ Nanotechnology/ Nanotechnology/ Ceramics Engineering/ Chemical Engineering; Electrical/Electronics/ Electronics & Communication/ Instrumentation and Control Engineering/ Communications & signal processing/ VLSI/ Nanoelectronics/Image processing/ Speech processing/ RF-Microwave/ Power electronics/ Power systems / Control systems; Computer Science Engineering/ Information Technology/ Software Engineering/ Data Science/ Data Analytics; Transportation Engineering/ Aerospace Engineering/Space Engineering/ Aeronautics, Physics, Chemistry, Mathematics). *(Relaxation of 5% in CPI/ CGPA/ Percentage of the qualifying degree is applicable for Indian applicants belonging to SC, ST and PwD categories)*

**Categories of Admission:**
**Indian students:_FA (Fellowship Awardee), _SW (Sponsored WITHOUT Institute scholarship), DF (Defense Forces), CT (College Teacher), IS (Institute Staff).**
**International students: ISF (International Self-Finance), ISW (International Sponsored by Industry or NGO), GSW (International Sponsored by Government organization)**

***Candidates will not be provided any scholarship for this program from IIT Indore.***

| 1 | ZZ xxx | Elective-I | x-x-x-3 |
| 2 | ZZ xxx | Elective-II | x-x-x-3 |
| 3 | ZZ xxx | Elective-III | x-x-x-3 |
| 4 | EV 797* / EV 798* | Ph.D. Seminar Course | 0-2-0-2 |

**Note:**
1. A Ph.D. student having M.Tech./ME/MPhil qualification has to complete at least two courses with a total minimum credit of 6. In addition, one Ph.D. seminar course needs to be completed by the applicant.
2. A Ph.D. student having M.Sc. or equivalent qualification has to complete 6 to 8 Ph.D. level courses of at least 3 credits each and 1-2 Ph.D. seminar courses of at least 2 credits each. The minimum number of courses will be 6 Ph.D. level courses and one Ph.D. seminar course (minimum coursework of 20 credits).

* Ph.D. Seminar course can be taken either in Autumn or in Spring Semester or both as suggested by the Faculty Advisor/Thesis Supervisor.

**Courses for the Electives-I to VI**: A student can opt from the PG courses being offered by any School/ Department/ Centre of IIT Indore as suggested by thesis supervisor.

|---|---|
| **Title of the course** | **Vehicle Dynamics** |
| Credit Structure | L-T-P–Credits<br>2-1-0-3 |
| Name of the Concerned Department | Mechanical Engineering |
| Pre-requisite, if any | NA |
| Scope of the course | This course is designed for students from diverse engineering fields of study. This course shall cover fundamental approaches for vehicle dynamics modelling as well as study of important dynamic systems of the automotive systems including vehicle handling performance. |
| Course Syllabus | **Mechanisms, kinematics and balancing:** Introduction.<br>**Introduction to vehicle dynamics:** History of motor vehicle age; Fundamental approach for modelling: lumped mass, vehicle and earth fixed coordinate systems; and Dynamic axle loads.<br>**Acceleration and braking analysis:** Characteristics of conventional vehicle engines; Power train and different elements in it; Automatic transmissions; Selection of gear ratios; and Traction-limited acceleration. Basic equations; Braking forces; Tire-road friction; Requirement for braking performance; Brake proportioning; Anti-lock brake systems; Braking efficiency; Rear wheel lock-up; and Pedal force analysis.<br>**Road loads and ride:** Aerodynamics: Mechanics of air flow and pressure distribution on vehicle, aerodynamic forces and aids, and different forces and moments; Rolling resistance; and Total road loads. Excitation sources; Vehicle response; and Perception of ride.<br>**Steady state cornering:** Low-speed turning; High-speed cornering; Suspension effects on cornering; and Measurement of understeer gradient.<br>**Suspensions:** Solid axles; Independent suspensions; Anti-squat and anti-pitch suspension geometries; Anti-drive suspension geometry; Roll center analysis; and Active analysis.<br>**Steering systems:** Axis systems; Steering linkages; Steering geometry error; Front wheel geometry; Steering system forces and moments; Steering models; Effect of front-wheel drive; and Four-wheel steer.<br>**Rollover:** Quasi-static rollover of rigid and suspended vehicles; Transient rollover; and Rollover accidents.<br>**Tires:** Tire construction; Size and load rating; Terminology and axis system; Forces and moments acting on tire; Free rolling tire; Rolling<br>resistance; Tire under braking, driving and cornering conditions; Combined cornering and braking/driving; Physical tire models;<br>Camber thrust; Aligning moment; Conicity and ply steer; Durability forces; and Tire transient behavior and vibrations.<br><br>**Vehicle handling performance:** Criteria for good handling; Single-track vehicle modeling; Steady and non-steady state analysis; and Graphical assessment methods. |

| **Title of the course** | **Autotronics** |
| Credit Structure | L-T-P–Credits<br>2-0-2-3 |
| Name of the Concerned Department | Mechanical Engineering |
| Pre-requisite, if any | NA |
| Scope of the course | The innovations in vehicle architectures and systems that enable cutting edge success in the electric hybrid automotive which are of high demand in the recent years. Knowledge on automotive electronics in steering the mechanical component of automobile system is the key focus of this autotronics course. This course highly focus towards providing an exposure to the student community about the automotive instrumentation. Automotive electronic system concentrating on improving the engine controls, transmission drivetrains, actuators, automotive sensors , governing control systems, MEMS based devices for energy efficient systems and IOT enabled automotive diagnostic systems are some of the key topics focussed in this course. |
| Course Syllabus | **Automotive Instrumentation**<br>The system approach to control and Instrumentation, electronic fundamentals, I/O signal flows and conversions, Multiplexing, fuel quantity measurement, coolant temperature measurement, oil pressure measurement, vehicle speed measurement, display devices and intelligent glass cockpit, Engine management system, ABS, Computer controlled dampers<br>Automotive actuators and Transmission systems<br>Actuator operations, Actuator for fuel injectors, gas circulation, idle speed control, ABS actuators, electronic unit injectors, Piezo electric energy harvesters, Transmission mechatronics system for electric hybrid vehicle 4 Wheel and 2 Wheel drives, Steer by wire and intelligent braking.<br>**Automotive Sensors and MEMS systems**<br>Electromagnetic sensors, optical sensors, combustion knock sensors, variable resistance type sensors, tyre pressure sensing, temperature sensors, ride height control sensors, manifold absolute pressure sensor, exhaust gas oxygen sensor, air low sensors, accelerometers and other sensors for steering by wire.<br>**Vehicle control systems**<br>Air fuel control, spark timing control, transmission control, clutch for awd, hybrid vehicles control, series parallel split hybrid and feedback based supervisory control, cruise control, ABS control and control for fuel systems<br>**Automotive system Diagnostics**<br>Circuit testing, six step approach, fault finding and emission related systems, ignition systems, sensor system and intermittent fault diagnostic systems, Intelligent collaborative diagnostic systems, IOT enabled conation monitoring and diagnostic systems |

|---|---|
| **Title of the course** | **Electric Machines and Drives** |
| Credit Structure | L-T-P–Credits<br>2-0-2-3 |
| Name of the Concerned Department | Electrical Engineering |
| Pre-requisite, if any | NA |
| Scope of the course | Motor drives are the core technology for EVs that convert the on-board electrical energy to the desired mechanical motion. Meanwhile, electric machines are the key element of motor drive technology. The requirements of electric machines for EVs are much more demanding than that for industrial applications. This course aims to cover all the fundamental aspects of electric machines and drive technology required for EVs. |
| Course Syllabus | Overview of Motor Drives Technology required for EVs<br>**DC Motor Drives**: DC Machine modeling, DC Motor Control, Design Criteria of DC Motor Drives for EV<br>**Induction Motor Drives:** Induction Machine modeling, Induction Motor Control like v/f control, vector control and DTC, Design Criteria of Induction Motor Drives for EVs<br>**Permanent Magnet (PM) Brushless Motor Drives:** PM Brushless machines, PM Brushless Machine Control, Design Criteria of PM Brushless Motor Drives for EVs.<br>S**witched Reluctance Motor (SRM) Drives:** Switched Reluctance Machines and related converters, Switched Reluctance Motor control, Design Criteria of SRM Drives for EVs.<br>**Application examples for each motor drives related to EVs.**<br>**Lab Component**: In practical sessions, experiments (accompanied with simulations) will give an idea about each motor drives performance and hands on experience on control design of these drives. Following experiments are proposed:<br>1) Control of a separately excited dc motor (1 Session)<br>2) V/F control of Three Phase Induction Motor (1 Session)<br>3) Study of Vector Control of Three Phase Induction Motor<br>(Simulation + Experimental Verification) (2 Sessions)<br>4) Study of Direct Torque Control of Induction Motor (2 Sessions)<br>(Simulation + Experimental Verification)<br>5) Study of Permanent Magnet Synchronous Machine (2 Sessions)<br>(Simulation + Experimental Verification)<br>6) Study of Synchronous Reluctance Machine (2 Sessions)<br>(Simulation + Experimental Verification) |

| Title of the course | Advanced Microwave & Optical Devices |
| Credit Structure | L - T - P - Credits<br>2-1-0-3 |
| Name of the Concerned Discipline | Centre for Advanced Electronics |
| Pre-requisite, if any | Not Applicable |
| Scope of the course | This course is designed for the UG and PG students with the background in Electronics, Electrical Engineering, Physics and Material Science. This course will emphasize on the fundamentals of microwave and optical devices and their multidisciplinary applications. The course aims to explain basics, advances and technology of high frequency devices & components. |
| Course Syllabus | **Introduction to Microwave Engineering & Photonics**: Elements of electromagnetic field theory; Wave propagation in microwave and optical waveguides.<br>**Microwave and High Frequency Devices**: Microwave waveguides & components; Tunnel diode, High frequency transistors – HBTs, HEMTs; Charge coupled devices. Transferred electron devices, Avalanche transit time devices; Microwave generation; Monolithic microwave integrated circuits.<br>**Advanced Optical Devices:** Advanced optical waveguides and cavities, LIDAR, semiconductor optoelectronics, Optical switches, Cavity opto-mechanics.<br>**Elements of Microwave Photonics:** Microwave photonic links, Radio over fibre; Photonic generation of microwave signals. |

# Course Structure and syllabus of M.Tech. in Applied Optics and Laser Technology

**Course Structure of M.Tech. in Applied Optics and Laser Technology (From AY 2023-24)**

**Minimum eligibility criteria:** B.E/ B.Tech (Mechanical/ Electrical/ Electronics and Communication/ Instrumentation and Control/Production and Industrial Engineering/ Biotechnology/ Engineering Physics/Metallurgy/ Aerospace Engineering/ Space Science and Engineering/ Materials Science) or M.Sc. (Physics/ Astronomy/ Material Science/ Applied optics/ Biotechnology) with GATE in ECE, EE, IN, ME, PH, PI & MT. **This program is restricted only to Indian Nationals.**

**Categories of Admission:**
Indian Students: Teaching Assistantship (TA); (ii) Highly motivated sponsored candidate (SW) on full-time basis from highly reputed R & D organizations such as DRDO, ISRO, BHEL, C-DAC, ADE, ADA, etc. and highly reputed Industries; (iii) Defense Forces (DF): Candidates sponsored by the Defense Forces; (iv) Regular institute staff (IS) of IIT Indore on part-time basis only. Candidates of SW, DF and IS categories will not be provided any scholarship.

**Qualifying Examination:**
Indian Students: Valid GATE qualification in CS.

**Duration of Program:** 2 years on full-time basis.
**Number of intakes:** 15 TA

**1st Year Semester-1**

# Course Structure of PG and Ph.D. Programs in Center of Futuristic Defense and Space Technology (CFDST) and Syllabi of Courses

## Course Structure of M.Tech. Program
## in Defense Technology with an option convert in M.Tech.+Ph.D. program (from AY 2023-24)

**Minimum Educational Qualification:** Four-year Bachelor's degree in Engineering with first division/ first class as defined by the awarding Institute/ University for Indian applicants and equivalent to international applicants, as assessed by the Institute. Relaxation of 5% in qualifying degree is applicable for SC, ST and PwD applicants.

**Qualifying Examination:** Minimum 2 years of experience in Defense Laboratory / ISRO / Defense Industry / Equivalent limited associated industry

**Categories of Admission:**
**Indian Students:** Only for Highly motivated sponsored candidate **(SW)** from highly reputed defense R & D organizations such as DRDO, ISRO, BHEL, ADE, ADA, etc. and highly reputed defense Industries; (ii) Defense Forces **(DF)**: Candidates sponsored by the Defense Forces.

**Duration of Program:** 2 years on full-time basis.

**Intake:** 15

| ZZ XXX | Elective-VII | X-X-X | 3 |
| DT 698 | PG Seminar course | 0-2-0 | 2 |
| | | **Total minimum credits earned during the semester** | **14** |

**2nd Year: Semester–III**

| Course code | Course Title | L-T-P | Credits |
|---|---|---|---|
| DT 799 | M. Tech. Research Project (Stage-I) | 0-0-36 | 18 |
| | | **Total minimum credits to be earned during the semester** | **18** |

**2 nd Year: Semester–IV**

| Course code | Course Title | L-T-P | Credits |
|---|---|---|---|
| DT 800 | M. Tech. Research Project (Stage-II) | 0-0-36 | 18 |
| **Total minimum credits to be earned during the semester** | | | **18** |
| **Total minimum credits to be earned during the program** | | | **68** |

@ In addition to this course list, a student can also opt from the PG courses being offered by the other disciplines.

**NOTE:** 1. Request for conversion from M.Tech. to M.Tech. + Ph.D. dual degree will be considered after evaluating the research potential of the promising and motivated PG students at the end of the **third semester of their program.**

**2.** If a student opts for the Dual Degree Program but cannot complete the requirements of a Ph.D., an **exit option** with the M.Tech. degree can be earned at the end of the final semester of the normal M.Tech. Program by getting the M.Tech. Research Project examined in the standard manner as per the requirements for the award of an M.Tech. degree.

3. The enhancement in the scholarship will be from the beginning of the fifth semester or from the date on which all requirements for the award of M.Tech. degree are fulfilled, whichever is later.

## Course Structure of Ph.D. Program in Defense Technology by Center of Futuristic Defense and Space Technology (CFDST) (from AY 2023-24)

**Minimum Educational Qualification:** Masters' degree (with first division as defined by the awarding Institute/ University) in the relevant areas of Engineering (Mechanical Engineering/Technology- Machine/system design/ Thermal Engineering/Heat Power/Energy Materials/Fluids & Thermal Engineering/Manufacturing Engineering/Industrial Engineering/Production Engineering/Reliability Engineering/CAD/CAM/Automobile Engineering; Metallurgical Engineering/Material Science and Engineering/Nanotechnology/Nanotechnology/Ceramics Engineering/Chemical Engineering; Electrical/Electronics/Electronics & Communication/Instrumentation and Control Engineering/Communications & signal processing/VLSI/Nanoelectronics/Image processing/Speech processing/RF-Microwave/ Power electronics/Power systems/Control systems; Computer Science Engineering/Information Technology/Software Engineering/Data Science/Data Analytics; Civil Engineering/Structural Engineering/Water & Hydrology; Aerospace Engineering/Space Engineering/Aeronautics). *(Relaxation of 5% in CPI/ CGPA/ Percentage of the qualifying degree is applicable for Indian applicants belonging to SC, ST and PwD categories)*

**Qualifying Examination:** Minimum two years of post-PG experience in Defense Laboratory/ ISRO/ Defense Industry/ Equivalent limited associated industry.

**Categories of Admission:**
**Indian Students:** Only for Highly motivated sponsored candidate **(SW)** from highly reputed defense R & D organizations such as DRDO, ISRO, BHEL, ADE, ADA, etc. and highly reputed defense Industries; (ii) Defense Forces **(DF)**: Candidates sponsored by the Defense Forces.

### Course Structure Ph.D. Program in Defense Technology

**A) Semester-I (autumn / spring)**

| S. no. | Course code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1 | ZZ xxx | Elective-I | x-x-x-3 |
| 2 | ZZ xxx | Elective-II | x-x-x-3 |
| 3 | ZZ xxx | Elective-III | x-x-x-3 |
| 4 | DT 797* / DT 798* | Ph.D. Seminar Course | 0-2-0-2 |

**B) Semester-II (autumn / spring)**

| S. no. | Course code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1 | ZZ xxx | Elective-I | x-x-x-3 |
| 2 | ZZ xxx | Elective-II | x-x-x-3 |
| 3 | ZZ xxx | Elective-III | x-x-x-3 |
| 4 | DT 797* / DT 798* | Ph.D. Seminar Course | 0-2-0-2 |

**Note:**
1. A Ph.D. student having M.Tech./ME/MPhil qualification has to complete at least two courses with a total minimum credit of 6. In addition, one Ph.D. seminar course needs to be completed by the applicant.

* Ph.D. Seminar course can be taken either in Autumn or in Spring Semester or both as suggested by the Faculty Advisor/Thesis Supervisor.

**Courses for the Electives-I to VI**: A student can opt from the PG courses being offered by any School/ Department/ Centre of IIT Indore as suggested by thesis supervisor.

| | |
|---|---|
| **Course Code** | **DT 601** |
| **Title of course** | **Engineering Mathematics** |
| **Credit Structure** | L-T-P-Credits<br>2-1-0-3 |
| **Name of the Concerned Discipline** | Center of Futuristic Defense and Space Technology |
| **Pre-Requisite, if any** | None |
| **Scope of the course** | In this course, the students will be exposed to advanced mathematics and its application in the engineering domain. The content taught in this course will further help the students to understand the advanced courses listed in different baskets, such as Finite element methods (FEM), Computational Plasticity, etc. |
| **Course Syllabus** | **Linear Algebra**: Vectors and Matrices, Solving Linear Equations, Vector Spaces and Subspaces, Orthogonality, Eigenvalues and Eigenvectors.<br>**Tensor Algebra and Vector Calculus**: Index notation, First order tensor, $2^{nd}$ order tensor, Invariant of second order tensor, transformation of tensor, Polar decomposition Theorem, Gradient of a tensor, Divergence of a tensor field, Curl of a tensor field, Derivatives of the invariants of a second-order tensor, Greens Theorem, Divergence Theorem, Stokes theorem.<br>**Differential Equations:** Various types of ordinary differential equations (ODEs) and partial differential equations (PDEs), techniques to ODEs and PDEs.<br>**Transform Calculus**: Laplace Transform, Fourier Transform, Wavelet Transform<br>**Statistics and Probability:** Basics of Probability, Conditional Probability, Bayes theorem, Random variables, Variance and expectations, Probability distributions |
| **Suggested Books** | **Textbooks:**<br>1. Gilbert Strang, "Introduction to Linear Algebra" 5th-Ed, Wellesley-Cambridge Press, 2016, ISBN- 978-0980232776.<br>2. Sheldon Ross, "A First Course in Probability-9e", Pearson Education India, 2013, ISBN: 978-9332519077.<br>3. Erwin Kreyszig, Advanced Engineering Mathematics, Tenth Edition, Wiley, New York, 2010.<br><br>**Reference Books:**<br>4. Gary L. Peterson and James S. Sochacki, Linear Algebra, and Differential Equations, First Edition, Pearson, 2015.<br>5. Douglas C. Montgomery and George C Runger: Applied Statistics and Probability for Engineers: Wiley (Sixth Edition): 2016: ISBN-13 978-8126562947 |

| | |
|---|---|
| **Course Code** | **DT 603** |
| **Title of course** | **Design of Experiments through Case Studies** |
| **Credit Structure** | L-T-P-Credits<br>1-2-0-3 |
| **Name of the Concerned Discipline** | Center of Futuristic Defense and Space Technology |
| **Pre-Requisite, if any** | None |
| **Scope of the course** | In this course, the students will be exposed to various problems faced by defense R&D organizations and defense industries and defense forces. This would be a flip class. |
| **Course Syllabus** | Design of Experiments.<br><br>Case studies on the problems faced by defense R & D organizations such as DRDO, ISRO, BHEL, ADE, ADA, etc. and defense Industries, defense forces. |
| **Suggested Books** | None |

| | |
|---|---|
| **Course Code** | **DT 651** |
| **Title of course** | **Systems Design Laboratory** |
| **Credit Structure** | L-T-P-Credits<br>0-1-4-3 |
| **Name of the Concerned Discipline** | Center of Futuristic Defense and Space Technology |
| **Pre-Requisite, if any** | None |
| **Scope of the course** | This course will provide exposure experimental and modelling techniques required in defense. |
| **Course Syllabus** | • Systems design for ballistic loading applications<br>• Fatigue assessment and life predication<br>• Coupled simulations (Thermal/Fluid/Structural etc.)<br>• Camouflaging of ground vehicles and Military Tanks<br>• Target Tracking using IR signature mapping.<br>• Real-time intrusion detection using Image analytics and IR mapping.<br>• IR optimization for defense assets |
| **Suggested Books** | 1. M. Andre,J. Meyers, Dynamic Behaviour of Materials, Wiley, 1994, ISBN: 9780471582625.<br>2. John D. Anderson, Jr. Computational Fluid Dynamics the Basics with Applications, McGraw Hill Education, 2017, ISBN-13: 978-1259025969.<br>3. National Research Council, Defense Modeling, Simulation, and Analysis: Meeting the Challenge, National Academies Press (October 22, 2006), ISBN: 978-0-309-10303-9.<br>4. David L. Adamy, Introduction to Electronic Warfare Modeling and Simulation, Artech Print on Demand (October 31, 2002).<br>5. # Course Structure of PG and Ph.D. Programs in Centre for Rural Development and Technology (CRDT) and Syllabi of Courses

**Course Structure for Ph.D. Program in Rural Development and Technology by Centre for Rural Development and Technology (CRDT) (w.e.f. AY 2023-24)**

**Minimum Educational Qualifications (MEQs):** Masters' degree in Science or Engineering or Humanities and/or Social Sciences (Mechanical/ Metallurgical/ Electronics / Electrical / Physics / Engineering Physics/ Mathematics / Statistics/ Microelectronics / Instrumentation / VLSI Design / Embedded System / Optoelectronics /Materials Science and Engineering / Nanotechnology / Energy Science and Engineering / Laser Technology / Tele Communication / Chemistry/ Mechatronics / Microwave Engineering / Biotechnology / Biological Sciences / Structural Engineering / Construction Management / Economics / Agricultural Economics / Political Science / Development Economics / Forest Economics / Environmental Science / Geography / Instrumentation and Controls / Environmental geotechnics / Space Engineering/ Geotechnical engineering / Engineering (Any Stream) (with first division as defined by the awarding Institute/ University)

**Categories of Admission:**
Indian students: FA (Fellowship Awardee), SW (Sponsored WITHOUT Institute scholarship), DF (Defense Forces), CT (College Teacher), IS (Institute Staff).
International students: ISF (International Self-Finance), ISW (International Sponsored by Industry or NGO), GSW (International Sponsored by Government organization)

***Candidates will not be provided any scholarship for this program from IIT Indore.***

**Semester-I (Autumn / Spring)**

| Sr. No. | Course code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1 | ZZ xxx | Elective-I | x-x-x-3 |
| 2 | ZZ xxx | Elective-II | x-x-x-3 |
| 3 | ZZ xxx | Elective-III | x-x-x-3 |
| 4 | RDT 797*/ RDT798* | Ph.D. Seminar Course | 0-2-0-2 |

**Semester-II (Autumn / Spring)**

| 4 | RDT798*/ RDT797* | Ph.D. Seminar Course | 0-2-0-2 |

**CRDT Courses for Elective I -VI** (In addition to these courses, a student can also choose from the Ph.D. courses being offered by the other disciplines.)

| Sr. No. | Course code | Course Title | L-T-P-Credits |
|---|---|---|---|
| 1 | CH 701 | Spectroscopic Techniques. | 2-1-0-3 |
| 2 | EE 622 / EE 422 | Digital Circuit Design | 2-1-0-3 |
| 3 | EE 440/640 | Analog and Mixed Signal IC Design | 2-1-0-3 |
| 4 | BSE 628 | Genomics and Proteomics | 2-1-0-3 |
| 5 | BSE 606 | Molecular Virology and Viral Pathogenesis | 2-1-0-3 |
| 6 | ME 434/634 | Principles of Product Design | 2-1-0-3 |
| 7 | ME 436/636 | Dynamics and Control Systems | 2-1-0-3 |
| 8 | CH 711 | Bio-Organic and Medicinal Chemistry | 2-1-0-3 |
| 9 | HS 618 | Sustainability Studies | 2-1-0-3 |
| 10 | HS 601 | Research Methods in Social Sciences | 2-1-0-3 |
| 11 | HS 626 | Environmental and Natural Resource Economics | 2-1-0-3 |
| 12 | HS 600 | Data Analysis and Technical Writing | 2-1-0-3 |
| 13 | EE 420/620 | IC Fabrication Technology | 2-1-0-3 |
| 14 | EE 429/629 | Nanotechnology and Nanoelectronics | 2-1-0-3 |
| 15 | BSE 624 | Bioprocess Engineering and Technology | 2-1-0-4 |

**NOTE:**

1) A Ph.D. student having M.Tech./ME/MPhil qualification has to complete at least two courses with a total minimum credit of 6. In addition, one Ph.D. seminar course needs to be completed by the applicant.
2) A Ph.D. student having M.Sc. or equivalent qualification has to complete 6 to 8 Ph.D. level courses of at least 3 credits each and 1-2 Ph.D. seminar courses of at least 2 credits each. The minimum number of courses will be 6 Ph.D. level courses and one Ph.D. seminar course (minimum coursework of 20 credits).

* Ph.D. Seminar course can be taken either in Autumn or in Spring Semester or both as suggested by the Faculty Advisor/Thesis Supervisor.
